# Urbanization in North-Western Regions of Bangladesh

A dissertation

Submitted to the University of Rajshahi in Fulfil lment of the  
Requirement for the Degree of Master of Philosophy in  
Geography and Environmental Studies

**By**

**Sangida Islam**

**Supervised By**

**Professor M. Abdur Rahman**

Department of Geography and Environmental Studies  
University of Rajshahi, Rajshahi-6205, Bangladesh.

June, 2013

*Dedicated*

*To*

*My Parents*

## Declaration

I, the undersigned hereby declare that this dissertation entitled "**Urbanization in North-Western Regions of Bangladesh**" is my original research work and submitted by me to Rajshahi University, Bangladesh for the award of the degree of Master of Philosophy in Geography and Environmental studies carried out under the supervision of Professor. M. Abdur Rahman, Department of Geography and Environmental studies, university of Rajshahi, Bangladesh.

To the best of my knowledge, this work neither in part nor in full has been submitted previously to any University or Institute for the award of any Degree, Diploma, Fellowship or any other similar purpose.

**Dated: 30.06.2013**

  
(Sangida Islam)  
**Researcher**

**M. Abdur Rahman**

## Certificate

I have the pleasure to certify that the dissertation entitled "**Urbanization in North-Western Regions of Bangladesh**" submitted by **Sangida Islam** to Rajshahi University, Bangladesh carried out under my direct supervision.

I also certify that I have gone through the entire dissertation and found it satisfactory for submission in fulfillment of the requirements for the award of degree of Masters in Philosophy in Geography and Environmental Studies and may be placed before the examiners for their consideration.

**Dated: 30.06.2013**

## Abstract

Urbanization is one of the great discussion matter of the world in recent times. Bangladesh is considered to be in the primary stage of urbanization, The characteristic of Urbanization in Bangladesh is still low in terms of level, development and facilities or amenities are available in the country. But nature of overall growth is problematic and deserves much attention in all sectors of development authorities. Urbanization and development brings benefits to the urban society, it is an indicator of development and modernization, but when the urbanization becomes over, not uniform or uneven, uncontrolled and unpredictable, it creates various threats to the planners, development authorities and urban habitat for future development. Therefore, the study on "**Urbanization in North-Western Regions of Bangladesh**" is very much significant.

Basically, the main thirst of this study is to examine & provide the level of urbanization, spatial (inter districts) patterns and changing patterns in the level of urbanization, urban development and urban facilities or amenities are available in the country by and large focusing on the North-Western Regions of Bangladesh based on secondary data using Davidorich Model (Z-Score) to generate an understanding as its real urban characteristics of the study area. 16-variables have been chosen for the study. The main findings of the study is that urbanization of the study area is still low in respect of level and no remarkable changes have been found between 1991 to 2001.

Though Bangladesh is a very small country in the world Map but at present, the trend of urbanization is not least, i.e. more than 23% of the people are living in the urban areas by creating both paralytic and parasitic effect on the other places and on the national economy of Bangladesh. But the urbanization of Bangladesh is still low in terms of level among the developed countries & developing countries of the world. The characteristic features of urbanization in Bangladesh is excess

increase in urban population, largely due to natural growth, rural-urban migration and growing importance of local resources.

In the recent times, increase of urban population, problems of urban planning & development, changing & attitudes of the peoples, urbanization and development has become a national issue of Bangladesh and has gained wide attention of scholars among a number of disciplines. Urbanization and development is interrelated matter and as a developing country, much research is required on urbanization and development of Bangladesh. So, an in depth study on "**Urbanization in North-Western Regions of Bangladesh**" will contributes much to find out the actual problems and solutions for the national development planning and also urban scholars, planners, researcher for further study.

## Acknowledgement

I humbly express the first and foremost greatfulness to the supreme authority Almighty Allah for giving me strength, courage, sense and patience to accomplish this study.

I am extremely pleased to express the deepest sense of greatfulness and immense indebtedness to my respected guide and supervisor M. Abdur Rahman, Professor, Department of Geography and Environment Studies, University of Rajshahi for his thoughtful supervision, valuable suggestion, efficient guidance and continuous encouragement to do such a difficult task from the very selection of the topic to the completion of the present research work. It is not superfluous to say that without his cordial guidance, it would not have been possible for me to carry out the entire research work and preparing this thesis report.

All teachers of the Department of Geography and Environmental Studies, University of Rajshahi have helped me in different way and I express my heartiest gratitude's to them. Specially, I wish to express my deep gratitude and indebtedness to Dr. Syed Rafiqul Alam Rumi, Dr. Md. Abu Hanif Sheikh, Dr. Raquib Ahmed, Dr. M. Zahidul Hasan, Dr. M. Mizanur Rahman, Dr. Md. Rezaur Rahman Raju, Md. Mizanur Rahman, Md. Masud, Parves Rana and Md. Moniruzzaman, for their kind, cordial & appreciative, co-operation and valuable suggestions regarding this dissertation from time to time.

I like to express my special thanks to some authorities like: IBS (Institute of Bangladesh Studies), BIDS (Bangladesh Institute of Development Studies), Central Library of Rajshahi University, Seminar Library of the Department of Geography and Environment Studies, Public Library of Rajshahi for giving me opportunity to collect required information, which are used as the secondary data for the present study.

I am extremely indebted to those scholars, researchers, academics and authors, whose works provided me significant information for the present study.

I am highly grateful and like to extend my heartiest thanks to my family members, especially my mother Mst. Rahima Islam, father Md. Saidul Islam, youngest brother Md. Raihanul Islam and youngest sister Sharmin Islam for their constant inspiration, continuous support and great affection to complete the research work.

Finally, above all, I would owe my indebtedness to my beloved husband Md. Abdul Khaleque Mollah, (Ph.D Researcher) who always inspired me for academic life by curtailing his personal pleasure and happiness. All the credit goes to him and I believe that success is due to his unalloyed love for knowledge and sincere efforts for making every arrangement necessary or available for the purpose. I also convey my thanks to him for helping me for data collection, data analysis by using statistical techniques & preparing Maps by using Geographical Tools specially GIS. My sweet children Tazrián Tarannum (Ahona) and Taki Tahmid (Anto) also showed great endurance and patience whenever I was very busy with my research works. My heartiest love and affection is bestowed on all of them.

Lastly, I convey my thanks and gratefulness to the Department of Geography and Environmental Studies and also the authority of Rajshahi University for selecting and giving me an opportunity to do the research work.

**The Researcher**

List of Maps	XIV-XV
Abbreviations	XVI
<b>Chapter One: Introduction to the Research</b>	<b>1-11</b>
1.1 Introduction	1
1.2 Statement of the Research Problem	1-3
1.3 Research Questions	3
1.4 Aims and Objectives of the Study	3-4
1.5 Literature Review and Conceptual Framework	4-6
1.6 Scope of the Study	6
1.7 Rational of the Study	7-8
1.8 Limitations of the Study	9
1.9 Organization of the Study	10
1.10 Conclusion	11
<b>Chapter Two: Research Design and Methodological Aspects</b>	<b>12-20</b>
2.1 Introduction	12
2.2 Research Design and Methodological Aspects	12
2.2.1 Research Design	12-13
2.2.2 Study Area: Selection Criteria and Description	13-14
2.2.3 Nature & Sources of Data	14
2.2.4 Data Collection Procedure	15-17
2.2.5 Data Processing and Analysis: Tools and Techniques	18-20
2.2.5.1 Geographical tools	18
2.2.5.2 Statistical and Mathematical Tools	18
2.2.5.3 Computer Tools	20
2.3 Conclusion	20
<b>Chapter Three: Spatial Pattern of Urbanization of the Study Area: 1991</b>	<b>21-43</b>
3.1 Introduction	21
3.2 Spatial Pattern of Urbanization of the Study Area: 1991	21
3.2.1 Spatial Pattern of Urban Population of the Study Area: 1991	21-22
3.2.2 Spatial Pattern of Sanitary Latrine Facilities of the Study Area : 1991	22-24
3.2.3 Spatial Pattern of Electricity Connection of the Study Area: 1991	24
3.2.4 Spatial Pattern of Sources of Drinking Water (Tube-well) of the Study Area : 1991	25-26
3.2.5 Spatial Pattern of Agricultural Contribution to the GDP of	27

the Study Area : 1991	
3.2.6 Spatial Pattern of Literacy Rate of the Study Area : 1991	28-29
3.2.7 Spatial Pattern of Urban Literacy Rate of the Study Area : 1991	30
3.2.8 Spatial Pattern of Primary School of the Study Area : 1991	30-32
3.2.9 Spatial Pattern of Secondary School of the Study Area :1991	33
3.2.10 Spatial Pattern of Colleges of the Study Area : 1991	33-34
3.2.11 Spatial Pattern of Bank Deposit of the Study Area: 1991	35
3.2.12 Spatial Pattern of Registered Rickshaws of the Study Area: 1991	35-37
3.2.13 Spatial Pattern of Metal Road of the Study Area : 1991	38
3.2.14 Spatial Pattern of Semi-Metal Road of the Study Area : 1991	38-40
3.2.15 Spatial Pattern of Kutcha Road of the Study Area : 1991	40
3.2.16 Spatial Pattern of Municipalities of the Study Area : 1991	40-42
3.3 Conclusion	43
<b>Chapter Four: Spatial Pattern of Urbanization of the Study</b>	<b>44-66</b>
<b>Area: 2001</b>	
4.1 Introduction	44
4.2 Spatial Pattern of Urbanization of Study Area: 2001	44
4.2.1 Spatial Pattern of Urban Population of the Study Area: 2001	44-45
4.2.2 Spatial Pattern of Sanitary Latrine Facilities of the Study Area : 2001	45-46
4.2.3 Spatial Pattern of Electricity Connection of the Study Area: 2001	47
4.2.4 Spatial Pattern of Sources of Drinking Water (Tube-well) of	47-49
the Study Area : 2001	
4.2.5 Spatial Pattern of Agricultural Contribution to the GDP of	50
the Study Area : 2001	
4.2.6 Spatial Pattern of Literacy Rate of the Study Area : 2001	50-52
4.2.7 Spatial Pattern of Urban Literacy Rate of the Study Area : 2001	53
4.2.8 Spatial Pattern of Primary School of the Study Area : 2001	53-55
4.2.9 Spatial Pattern of Secondary School of the Study Area : 2001	56
4.2.10 Spatial Pattern of Colleges of the Study Area : 2001	56-58
4.2.11 Spatial Pattern of Bank Deposit of the Study Area: 2001	58
4.2.12 Spatial Pattern of Registered Rickshaws of the Study Area: 2001	59-60
4.2.13 Spatial Pattern of Metal Road of the Study Area : 2001	61
4.2.14 Spatial Pattern of Semi-Metal Road of the Study Area : 2001	61-63
4.2.15 Spatial Pattern of Kutcha Road of the Study Area : 2001	64
4.2.16 Spatial Pattern of Municipalities of the Study Area : 2001	64-66
4.3 Conclusion	66
<b>Chapter Five: Spatial Changing Pattern of Urbanization of the</b>	<b>67-94</b>
<b>Study Area: 1991-2001</b>	
5.1 Introduction	67
5.2 Spatial Changing Pattern of Urbanization of the Study Area:	67
1991-2001	
5.2.1 Spatial Change in Levels of Urbanization of the Study	67-68
Area:1991-2001	
5.2.2 Spatial Change of Urban Population of the Study Area:	68-70
1991-2001	

5.2.3 Spatial Change of Sanitary Latrine Facilities of the Study Area: 1991-2001	70-71
5.2.4 Spatial Change of Electricity Connection of the Study Area : 1991-2001	71-72
5.2.5 Spatial Change of Sources of Drinking Water (Tube-well) of the Study Area: 1991-2001	73
5.2.6 Spatial Change of Literacy Rate of the Study Area: 1991-2001	73-75
5.2.7 Spatial Change of Urban Literacy Rate of the Study Area: 1991-2001	76
5.2.8 Spatial Change of Primary School of the Study Area: 1991-2001	76-78
5.2.9 Spatial Change of Secondary School of the Study Area: 1991-2001	79
5.2.10 Spatial Change of Colleges of the Study Area: 1991-2001	80-81
5.2.11 Spatial Change of Metal Road of the Study Area: 1991-2001	82
5.2.12 Spatial Change of Semi-Metal Road of the Study Area: 1991-2001	82-84
5.2.13 Spatial Change of Kutchha Road of the Study Area: 1991-2001	85
5.2.14 Spatial Change of Bank Deposits of the Study Area: 1991-2001	85-87
5.2.15 Spatial Change of Registered Rickshaws of the Study Area: 1991-2001	88
5.2.16 Spatial Change of Municipalities of the Study Area: 1991-2001	88-90
5.2.17 Spatial Change of GDP from Agricultural Sector of the Study Area: 1991-2001	91-92
5.2.18 Spatial Composite Ranking in Levels of Urbanization of the Study Area: 1991-2001	93-94
5.3 Conclusion	94
<b>Chapter Six: Summary, Conclusion and Recommendations</b>	<b>95-100</b>
6.1 Introduction	95
6.2 Summary Findings of the study	96-98
6.3 Conclusion	98
6.4 Recommendations	99
6.4.1 Control of Urban Population Increase	99
6.4.2 Creation of Employment Opportunities	99
6.4.3 Increase of Infrastructural Development	100
6.4.4 Formulation and Proper Implementation of Govt. Urban Policy	100
6.4.5 Increase of Research Works.	100
<b>BIBLIOGRAPHY</b>	<b>101-114</b>
<b>APPENDIX</b>	<b>115-140</b>

# Chapter One

## Introduction to the Research

### 1.1 Introduction

The word “**urban**” is usually placed against the term “**rural**”. **Geographically**, rural areas are considered as remote and politically powerless, while socially designated as traditional or indigenous. **On the contrary**, urban areas are seen as places of prosperity, innovation, dynamism, development, modernism, and located centrally in both the political and geographical senses (Islam, 2001). Moreover, the word “**urban**” refers to a particular type of place where the economic concentration of non-agricultural activities and the social concentration of a particular types of values, behaviour, organization and institutions are present (Carter, 1976; Nazem, 2001). **Urbanization means** an increasing modification from primary activities to industrial services or tertiary occupations and it is a process of continuous concentration of population into cities and metropolitan of a society. It is a dynamic process by which the population concentration increases involving a shift from agrarian to non-agrarian occupations (Mandal, 2000). From the above, the word “**urbanization**” characteristically refers to a particular process and place where infrastructural development, all kinds of non-agricultural activities, social, cultural, educational, transport and communicational, organizational and institutional, technological, informational, modern housing facilities, industrial and commercial, residential and administrative etc facilities are comparatively available.

The level of urbanization is usually associated with degrees of modernization or industrialization (ESCAP, 1981) and if industrialization can be said to have been the first great and continuing revolution in recent times, certainly urbanization is the next one (Breese, 1966).

However, the pattern of contemporary urbanization in developing countries differs substantially from those of Euro-American industrial urbanization and the forces of urbanization in developing countries are different from those in the west. A ‘**rural push**’ because of economic stagnancy, natural hazards and poverty in the rural areas seems to be the dominating factor of urbanization in developing countries and the limited ‘**urban pull**’ factors are however confined mainly to the capital cities like Dhaka, contributing to premature metropolitization & urban primacy and also creating enormous problems at the urban end. The case of rapid urbanization in Bangladesh clearly demonstrates this situation (Nazem, 2001).

In case of rapid urbanization of Bangladesh, both pull factor & push factor worked simultaneously resulting in unevenness in the development parameters of urbanization (BBS, 2003).

**But it is evident that** the level & process of urbanization, availability of urban amenities & urban development, non-agricultural activities, migration, infrastructural development, living standard as well as overall socio-economic changes are **not uniform** in the all urban areas of Bangladesh (Rahman, 2004).

Having considered the above, which has created a notion of high expectation to study on urban field of Bangladesh under the title of **“Urbanization in North-Western Regions of Bangladesh”** has been undertaken to examine mainly the level of urbanization, spatial variation of urban amenities and development parameters of the study area to the context of the national data based on secondary data of **Population Census of Bangladesh, 1991 & 2001**. Also a comparative study has been conducted between this two census years.

This study is based on basically published national data, published & unpublished literatures, which have been collected from the written materials such as books, journals, reports and softcopies of the internet.

To measure the **level of urbanization, spatial (inter-district) variations & changes of the urban amenities, only Standardized Model (Z-Score) for ranking the districts of North-Western Regions of Bangladesh based on Davidovich Model (1973)** has been followed.

In this chapter, introduction to the research, problems under study have been identified, limitations, Justifications, aims & objectives and a brief literature review on the related field have been discussed.

## **1.1 Statement of the Research Problem**

**Urbanization is a very recent & most important issue of the world**, a feature of the last one hundred & fifty years. Before the start of the nineteenth century, only 3% of the world’s population lived in towns. Expressed in a different way, the world’s population increased **three-fold** between 1800 & 1960, but the world’s urban population increased **thirty-fold** between 1950 & 1950, i.e. from 28.20% to 38.60% (Carter, 1982). It is evident that with the current pace of urban population growth, **the world’s urban population is increasing faster than the total population of the world** and it is also estimated that **65% of the total**

**world population will be urban dwellers by the year of 2025** (Pacione, 2007) and almost 90% of urban population growth will be in Asia, Africa and Latin America (UN, 2000). On the other, **by the year 2015, 80% of the world's largest cities will be in this region** (Dhaliwal, 2000) and all these will be the history of mankind of the world (Shaik, 2006).

**The process of urbanization in the developed countries** (viz. USA, Japan, French, Netherlands and others) **is characterized with extreme unevenness in the development of individual cities** and the process of urban centres in such goes on by way of their territorial expansion, amalgamation and formation of gigantic urban territories-the so-called "Megalopolis" (Khan, 1981). On the other hand, **urbanization of this nation (Bangladesh)** started considerably **during the beginning of the 20<sup>th</sup> Century**. During those days, the British rulers decided to establish different institutions for administrative and revenue collection purpose which has started the bridge of urbanization. **After the conclusion of the British era in our nation**, it was evident that slowly but surely the urban society started to exert its influence in charting the direction of the country's political, social and economic decisions (BBS, 1994, 1997, 1999, 2001, 2003). It is also evident that the percentage of urban population & number of urban centres were very small from 1901 to 1961 i.e. 2.43% to 5.19% and 48 to 78 in numbers but the higher rate of urban population & increasing trend of urban centres in Bangladesh was found between 1974 & 1981 i.e. 8.87% to 15.15% and 108 to 492 in numbers (ESCAP, 1981; BBS, 1994, 2003).

**In Bangladesh, two major political changes (partition in 1947 & liberation in 1971)** accelerated the process urbanization and the main reasons for growth of urban population in Bangladesh are; a) national increase of population, b) influx from rural areas, or urban to urban areas (migration), c) changes in urban boundary and changes in the delimitation & definition of urban areas (Shaik, 2006). All these factors (rural push & urban pull factors) are working behind the increasing or urban population in Bangladesh during 1901-2001 which are reflected in the censuses 1901-2001 (ESCAP, 1981; BBS, 2003).

Urbanization is an indicator of development and the proportion of urban population increases with socio-economic development of Bangladesh (BBS, 2003) and **the level of urbanization is usually associated with the degrees of modernization** or industrialization (ESCAP, 1981). But **it is observed from the all census years of Bangladesh that the level & extent of urbanization was not uniform** due to rural-urban migration, natural increase of population, expansion of urban areas where a large

number of urban people live in the urban slums and squatters where the amenities of life are very scarce (BBS, 2003). **In case of rapid urbanization** of Bangladesh, **both pull factor & push factor** worked simultaneously **resulting in unevenness in the development** parameters of urbanization (BBS, 2003).

But the above all true pictures indicate that there is a wide regional (inter-district) & intercensal variations and inequalities of urban population and urban amenities in Bangladesh. **This unevenness and uncontrolled urbanization process has stimulated to conduct such study & make imperative to study the extent & magnitude of urbanization and urban opportunities (amenities)** are available in Bangladesh.

**With this end in view**, an attempt has been drawn to assess the present state of affairs of Urbanization in North-Western Regions of Bangladesh that includes the intercensal & regional variations (inter-district) of urbanization process, urban amenities/opportunities and to suggest necessary remedies, which will represent the characteristic features of all urban areas of Bangladesh.

### 1.3 Research Questions

**It is necessary to fix up some specific objectives for every researchers** at the time of thinking & beginning of his/her research **to complete the work** smoothly in schedule time & plan. **But before fixing up the objectives, the researcher wants to search the following queries :**

- i) in what degrees/levels of urbanization exists in the study area during the census years 1991 & 2001 ?
- ii) is there any remarkable changes in the degrees of urbanization in the North-Western Regions of Bangladesh between the census years 1991 & 2001 and if yes, then what kind of it is ?
- iii) is there any radical changes in the urban development indicators/parameters between the two census periods & if yes, how much ?
- iv) is there any inter-districts variations & inequalities in the level of urbanization & urban amenities and if yes, how much ?

### 1.4 Aims and objectives of the Study

To find out the answers of the above questions, the following key goals & objectives of the study has been set up:

- i) to examine the level of urbanization & spatial pattern of urbanization of the study area to the context of the country;

- ii) to find out the spatial (inter-district) and decadal variations & inequalities of urbanization and urban development indicators, specially urban amenities between the census years 1991 & 2001 to the context of the country;
- iii) to make some recommendations & valuable suggestions on the issue.

## 1.5 Literature Review & Conceptual Framework

The study of urbanization and spatial inequalities in economic development and social change in developing world has gained wide attention of scholars among a number of disciplines. **This interest has been stimulated both by problems of rapid population growth, unplanned urban development and even widening spatial inequalities between urban & rural areas in the Third World** (Barke & O'Hare, 1984; Geiger & Faissol 1982; Smith 1979; Gore 1984), and by several theoretical constructs explaining **urbanization & economic growth** (Todaro 1981; Lewis 1971; Wingo 1975; Boudeville 1966; Friedmann 1966; Williamson 1965, Hirschmann 1958; Myrdal 1958; Perroux 1950). **These theories focused on either urbanization or economic development process as the source of spatial inequalities.**

From the sheer volume of contemporary literature on urbanization and spatial development, has primarily dealt with the balanced economic growth theme and the growth pole theme, a popular theory (Marx 1954/1956; Harrold 1947; Domar 1957; Solow 1956; Swan 1956, Uzawa 1961; Lewis 1954), it is agreed that no single theory of spatial economic development exists, but most theories link spatial development and inequality with urbanization (Rahman, 2004). It is also proved from the growth pole theory of Perrox (1955) later on that expansion of economic growth is not balanced and does not occur everywhere at the same time (Rahman, 2004).

**Urbanization is one of the most significant development issues in Bangladesh.** While developing nations in Asia show rapid rate of urbanization, Bangladesh still remains less urbanized, although the absolute urban population as well as the number of cities and towns in the country has increased manifold during the last few decades (Islam 1996; BBS 1991). **Both the process of urbanization and the dynamics of growth of urban centres in Banglaesh are quite different from other developing countries in South and Southeast Asia** (Rahman, 2004).

In Bangladesh, urbanization takes the form of rapid growth of urban population, largely due to natural growth and rural-urban migration (Khan, 19820. But the hierarchy of urban system includes both induced

and spontaneous growth centres. Large number of spontaneous growth centres grows due to rapid population growth as well as growing importance of certain local resource that induces economic growth. Although the administrative and organizational decisions, capital investments, technological innovations generally originate in the primate city and induced growth centres such as divisional and district headquarters, however, trickle down effects are not uniformly speeded spatially perhaps because of the country. And there exists wide spatial inequalities in the rates of urbanization, economic growth & development and urban opportunities/amenities (Rahman, 2004).

**Sheer volume of literature on urbanization and spatial development in Bangladesh has primarily dealt with growth of urban population (Elahi 1972; Khan 1982); factors, process, and patterns of rural-urban migration and urbanization (Alangir 1973; Islam 1974, 1978; Saleheen et. Al. 1990); urban spacing and regional packing (Rahman 1994c); urbanization and socio-economic development (Hossain & Islam 1981; Khan 1981); city size and urban growth patterns (Patel 1970; Islam 1974; Rahman 1994a, 1994b, 1997a, 1997b, 1998; Rumi 1970; Sultana 1993; Eusuf & Khatun 1995); and urbanization & rural development linkage and policy implications (Rahman 1994a, 1994b; Islam 1996); and regionalization of urbanization & spatial development under the growth pole theoretical framework (Rahman 2004).**

**Some studies have been conducted simply on migration, causes of migration from rural to urban area, city to city and within the city, different aspects of migration and also gave some suggestions to stop rapid migration (Islam 1999; Khatun 2003; Sultana 2002; Farhana 2008).**

The existing studies **vary widely in scope and scale of study areas; they have either focused on the urban problems of Dhaka city, or assessed the urban and regional development situations on the basis of national data. But they have not examined the spatial patterns of urbanization, changing of urbanization patterns, variations and inequalities in the development parameters and urban amenities in a broader aspects using Standardized Model (Z-Score) of Davidovich (1973) , which may yield significant policy implications for national economic planning & urban development planning in Bangladesh as a whole.**

After reviewing the aforesaid literatures, **we can point-out some important research gaps** which require further study & these are:

- i) Maximum studies have been carried out on various aspects **separately and partially**, which happens in urban area. **None has made any**

**study on the spatial level of urbanization, variations & changes** (district-wise study to the context of the country) on urbanization on the North-Western Region of Bangladesh for the Census Period 1991-2001.

- ii) Although, some studies have been conducted on socio-economic and environmental impacts on urbanization in urban area and **concentrated on partial aspects of urban issue but the level of urbanization, spatial patterns (inter-districts), variations & changes of urban amenities not studied**. An in depth study on the issue still to come.
- iii) No intercensal or decadal (1991 & 2001) variations & changes are studied on level of urbanization and urban amenities in any study for the study area.
- iv) No studies have been found on urbanization for the study area **separately**, i.e. North-Western Regions of Bangladesh.

From the foregoing information of the **above literature's & research gaps, it is presumed for the study that the level of urbanization** in the study area is **increasing & changing rapidly** between the census years 1991 & 2001 and **there is a wide spatial (inter-district) variations, inequalities & changes in the level of urbanization & urban amenities (urban socio-economic & infrastructural development indicators) in the study area**.

So, an in-depth study on **“Urbanization in North-Western Regions of Bangladesh”** as a step forward to the problem.

## 1.6 Scope of the Study

**Urbanization is a vast subject, not least from the international perspective & it is at present very much relevant to the developing countries. There is an ample scope to study on urbanization** because of various kinds of problems & issues are lying with urbanization (Rahman, 2004 ; Shaik, 2006). The scope of the present study confined to the **“Urbanization in North-Western Regions of Bangladesh”**. So, **the main concentration will be given to the urban people & their facilities are available** in the study area.

**While making a summary concerning different aspects of urbanization & processes** followed by the Government of Bangladesh, the following scope of the study has been found :

- 1) Characteristics of urbanization ;
- 2) Level & process of urbanization ;
- 3) Spatial pattern of urbanization ;
- 4) Spatial variations & changes of urban facilities ;
- 5) Special features of inequalities of urban development indicators/parameters etc.

## 1.7 Rationale of the Study

1. **Though Bangladesh is a very small country in the world map but at present the trend of urbanization is not least, i.e. more than 23% of the people are living in the urban areas (BBS, 2003) by creating both paralytic & parasitic effect on the other places & on the national economy of Bangladesh (Shaik, 2006).**
2. **Over, uneven, unplanned & unsystematic urbanization is creating various kinds of problems, viz. i) migration, ii) unemployment, iii) squatting, iv) absence of mass sanitary & water supply facilities, v) crowding, vi) lack of recreational facilities, vii) break-down of social order, viii) high crime rate, ix) squalor, x) inadequate housing and so on (AID, 1968), which are very much related with the socio-economic, demographic and environmental conditions and Bangladesh is not an exception to this fact (Shaik, 2006), which has created by and large a great attention to the all Governments of Bangladesh & also to the urban planners, scholars & researchers (Rahman, 2004). So, to understand the above realities, the study on the subject mentioned earlier have been chosen.**
3. **From the reviewed literature (stated in the later), it is revealed that no doubt, various studies have been conducted on urbanization, but no in-depth study was conducted earlier by focusing level of urbanization and spatial variations & changes of the level of urbanization & urban development indicators. Till, it is a neglected area of research in Bangladesh (Rahman, 2004 ; Shaik, 2006). So, it is an another vital reason for choosing the subject for the study.**
4. **It is also observed from the literature review that no study on the specific title & on that particular region was conducted earlier. So, this is one of the important reason for choosing the subject for the study.**

5. **On the other hand, the study is mainly based on Secondary data** to be collected and compiled from **Population Censuses of Bangladesh (1991 & 2001)**, which are very much available & reliable source for the study. So, this is one of the reason for selection of the subject for study.
6. **To understand the real picture on urbanization issue** by Urban Planners, Urban Scholars, Geographers especially Urban Geographers, Policy Makers, Environmental Scientists, Sociologists & Social Workers, Economists and new Researchers, **it is obviously required to generate adequate and reliable data on the concerned field**, but it is still rare (Rahman, 2004 ; Sarwar & Chowdhury, 2008). **So, to create a sound data bank on the urban field especially on the issue**, the study has been selected which is another reason.
7. To develop any urban planning module & to formulate urban policy by the Urban Planners & by the government of Bangladesh for reducing regional variations & development, **it is necessary to generate required information. So, it is assumed that this study will help to the same.**
8. **Geography is concerned with time & space. The proposed study is basically a spatial study covering the census period from 1991 to 2001 with quantitative type in nature based on urban geographical aspects. So, the study is very much related to the geography and obviously, the study is geographical**
9. **Finally, to compare the extent & magnitude of urbanization level and development facilities of the study area with that of other regions of Bangladesh, it may be said that**, the researchers & urban planners will be immensely benefited from this study in future. **Such study can not of course, determine policy but it can however, bring into view a greater knowledge of the realities, which policies must be dealt with and which may help the urban researchers in future.**

## 1.8 Limitations of the Study

**Every research has to face a number of obstacles and also the present research work is not out of the same.** Though, a great care have been applied for selecting the study subject & study site since inception of the study, but there have been some limitations also faced directly or indirectly, are systematically depicted below

- i) The study completely based on the secondary data sources, i.e. especially Population Censuses of Bangladesh, 1991 & 2001 and also Banglapedia, 2004 and some other related publications. No primary data is used in this study.
- ii) Only 16-Variables are used in this study and many variables may used in this study but due to unavailability of required data in the urban field, it was not possible to include the maximum variables.
- iii) In most cases, district-wise data are unavailable. Maximum variables are available in 1991 but not available in 2001 and for this reason, the data has been used with the help of Banglapedia, 2004.
- iv) Due to unavailability of the required secondary data sources, comparative analysis using all parameters of urbanization, development & urban amenities/facilities was not easy.
- v) The study only includes the data of Bangladesh Population Census 1991 & 2001 due to unavailability of required information.
- vi) The study has been conducted only on the urbanization of North-Western Region of Bangladesh but not on the whole of the country due to limited time, lack of financial assistance (money), physical resources (manpower/labour) and unavailability of district-wise required information.
- vii) Though Bangladesh Population Census for the year 2011 has already been conducted but seperate data on the urban field not published on the 16-Variables chosen for the study. It is one of the vital limitations of the study.
- viii) Though the industry, migration, housing status, health centres, hospital beds, post office, hat-bazar etc are the important factors for urban development & urban opportunities but due to unavailaiblity of the same are not included & discussed in the study as variables.

**In spite of the above all limitations and disfavoured environment,** the data & variables are used in the study to highlight the level of urbanization, spatial changing pattern & variations in urban amenities & development of the study area **will be able to represent the maximum real picture of the urban centres of Bangladesh.**

## **1.9 Organization of the study**

The whole study has been divided into six chapters. First two chapters are introductory. The next three chapters, i.e. from three to six chapters are the main corpus of the study while the last chapter contains summary of the main findings and recommendations of the study. In order to accomplish a meaningful representation of the present study is organized in six chapters are appended below:

### **Chapter One: Introduction to the Research.**

This chapter contains prelude to the research, the problems under study have been identified, research questions and purposes of the study, a brief review of literature in the related field and research gaps, rationale of the study, limitations of the study etc.

### **Chapter Two: Research Design and Methodological Aspects**

This chapter contains study methods and design, data base & collection procedure of the study, study area selection criteria, analytical tools and techniques of the study.

### **Chapter Three: Spatial Pattern of Urbanization of the Study Area: 1991**

A detailed discussion on the level of urbanization spatial patterns of socio-economic and demographic parameters of the study area for the census year 1991 to the context of the national data.

### **Chapter Four: Spatial Pattern of Urbanization of the Study Area: 2001**

This chapter also discussed on the level of urbanization spatial patterns of socio-economic and demographic parameters of the study area for the census year 2001 to the context of the national data.

### **Chapter Five: Spatial Changing pattern of Urbanization of the study Area, 1991-2001.**

This most important chapter focused and highlighted in discussion on the spatial changing pattern of urbanization and Urban development indicators of the study area between 1991 to 2001.

### **Chapter Six: Summary, Conclusion and Recommendation**

In the concluding chapter, summary findings of the study and conclusion has been discussed and also tried to provide some meaningful suggestions or recommendations on the basis of the study.

## 1.10 Conclusion

The characteristic of urbanization in Bangladesh is still low in terms of level, and in countrywide perspective is steadily growing; but nature of overall growth is problematic & deserves much attention in all sectors of development activities (Rana, 2007). The high rate of urban growth characterized during the period 1961-1974 and the trend evidently continuous. In 1999, the annual urban growth rate of Bangladesh was 4.5% (ESCAP, 1999). Rural-urban migration increases the urban growth dominantly (Rana, 2007). **The efforts towards understanding the nature of urbanization of Bangladesh especially North-Western Region have not been adequate.** The properly planned and efficiently manage the urbanization can be important factor in the national development. **The researcher would feel satisfied** if the issues raised in this study can provoke new thoughts to a great extent. As such, choosing of the proposed study on **“Urbanization in North-Western Region of Bangladesh”** will be more helpful & effective for the urban thinkers & planners, researchers & Government of Bangladesh, and also it may help the presentation of actual urbanization of Bangladesh if it will prove by this study. We need an honest & democratic government with much patriotic vision for the smooth development of urban sector and civil society should come forward with high vision under this development umbrella. **Although international donors & NGOs are providing remarkable support to urban development in Bangladesh (Rana, 2007), but due to some special reasons & conditions imposed by the donor agencies, inefficiency of the governments, desired goal of development has not been achieved till now. May Bangladesh be relieved from the curse of over & unplanned urbanization in right way in right direction.**

In the next chapter, methodological aspects and research design has been discussed.

  - 2.2.3 Nature & Sources of Data
  - 2.2.4 Data Collection Procedure
  - 2.2.5 Data Processing and Analysis: Tools and Techniques
  - 2.2.6 Geographical Tools
  - 2.2.7 Statistical and Mathematical Tools
  - 2.2.8 Computer Tools
- 2.3 Conclusion

# Chapter Two

## Research Design and Methodological Aspects

### 2.1 Introduction

The word “**Method**” means a way of doing something and “**Methodology**” means a set of methods used in a particular area of activities. A method involves a process or technique in which various stages or steps of collecting information are explained and the analytical tools or techniques are defined.

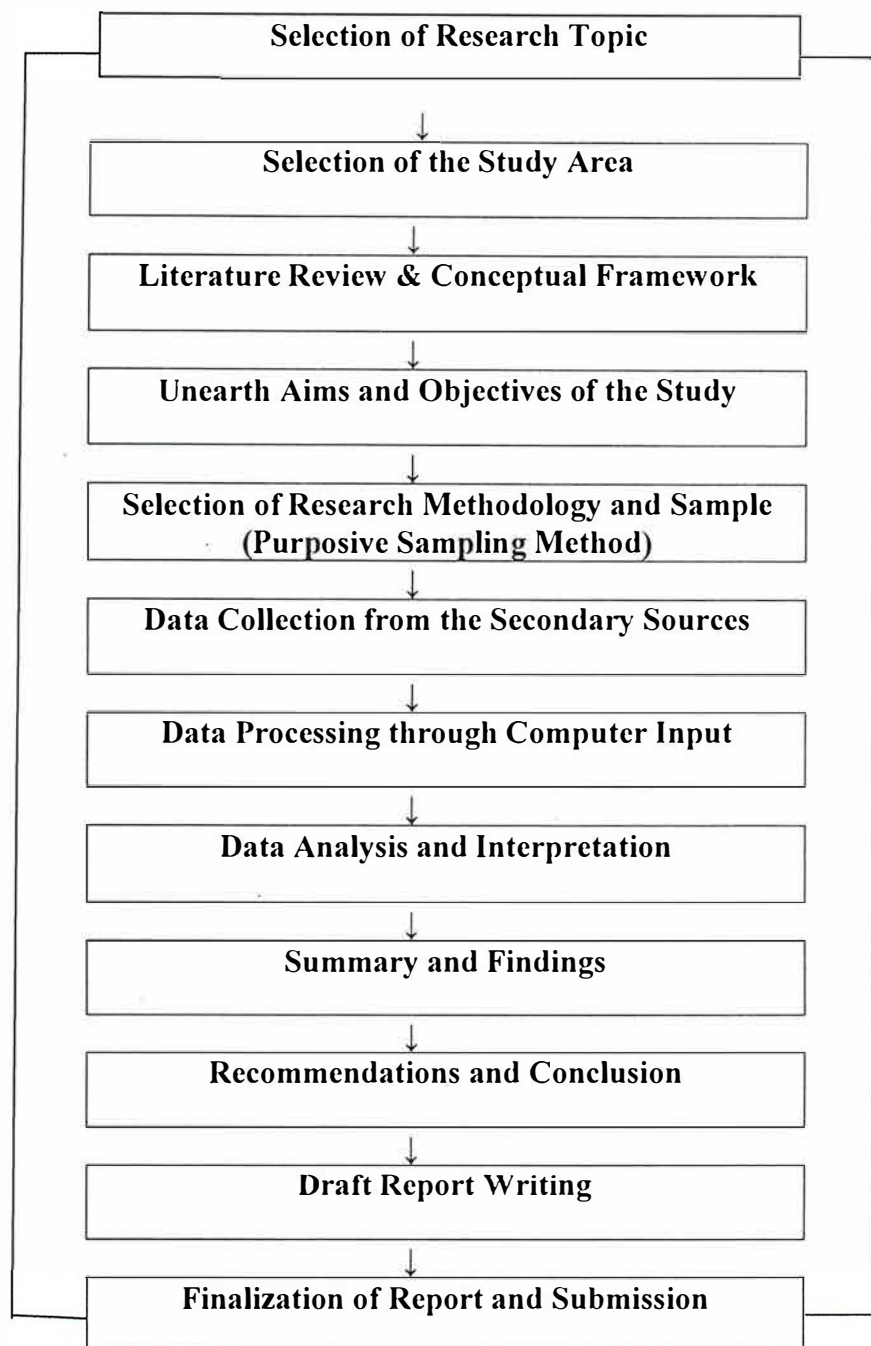

In order to the necessary information as precisely as possible, the secondary data sources has been pursued and **purposive sampling method** is used for the present study based on secondary data because of vast sampling area and availability of required data.

### 2.2 Research Design and Methodological Aspects

**It is necessary to follow some definite & scientific methods for every researcher.** For the proposed study, the following step by step methodology have been followed:

#### 2.2.1 Research Design

To complete the research work successfully and more accurately so far as possible from the researcher’s part, the following research design has been designed and followed for the whole research work as shows in the **Fig.1.**

**Fig. 2.1: Research Design**

### 2.2.2 Study Area: Selection Criteria & Description

The site for the proposed study has been selected considering the following criteria:

- i) Like other urban areas of Bangladesh, North-Western Region also bears more or less all the urban characteristics.
- ii) It is one of the representative region of the country.

- iii) The researcher is a permanent inhabitant of this region & so, it is assumed that the information are more reliable.
- iv) The data will be collected from the secondary sources especially from **Bangladesh Population Censuses**, which are available at **Rajshahi University Central Library, even in the Department of Geography & Environmental Studies**.
- v) The **Bangladesh Population Censuses** are available & for this reason, **collection of data has become easier** to the researcher.
- vi) Due to **time constraints, volume of work, physical & financial resources are available**, it is not possible to study on the whole urban areas of Bangladesh.
- vii) **No such specific study on the region** (North-Western Region of Bangladesh) has yet been conducted.
- viii) **Finally**, the site has been selected **on the basis of the research objectives**, which is very much **related with urban geography**.

So, these are the main reasons why North-Western Regions of Bangladesh has been selected as the site of the proposed study which may be considered as very much appropriate & justified.

### 2.2.3 Nature & Sources of Data

Nevertheless, **there is no strict rule to define the type of study (Chowdhury, 2006)**. The nature of study can be classified from different points of views:

- i) **on the basis of duration** (retrospective & prospective) ;
- ii) **on the basis of information type** (qualitative & quantitative) ;
- iii) **on the basis of relation of subject** (geographical, sociological, ecological etc).

The proposed study is **basically a quantitative study by nature based on urban geographical aspects**.

**Only secondary data** has been collected and used to meet & fulfillment of fundamental needs of the present study. The sources of data, which are used in this proposed study are mentioned below:

- a) Publications of Bangladesh Bureau of Statistics
  - Bangladesh Population Censuses.
  - Bangladesh Statistical Pocket Books.
- b) Publications of Asiatic Society of Bangladesh (Volumes of Banglapedia, 2004).
- c) Publications & Reports of Bangladesh Urban Studies (BUS).
- d) Publications & Reports of Bangladesh Institute of Development Studies (BIDS).
- e) Different kinds of National & International published and unpublished reports or materials including Books, Newspapers, Journals, Magazines, Research reports, Official documents, Thesis and Dissertations etc.
- f) **Internet based Websites.**

Source : Based on BBS, 2004.

## 2.2.4 Data Collection Procedure

Any scientific investigation requires one or more research methods, which enable a researcher to conduct the study systematically. The present study is exclusively used “**Documentary Method**” by compiling data from relevant documents published so far. In other word, “**Library Work Method**” is used for data collection from the secondary sources.

Considering the objectives of the study, availability of date and reviewing the related literatures, some important variables (16-variables) are considered for the study and index of them with definition are depicted below :

**Table-2.1: Selected Variables for the Study**

Level of Urbanization	Urban Amenities/Facilities		
* Municipalities	*Primary School	*Semi-Metal Road	*GDP from Agriculture
* Urban Population	* High School	*Kutch Road	*Sanitary Latrine Facilities
* Literacy Rate	* College	*Registered Rickshaw	*Sources of drinking water (Tube well)
* Urban Literacy Rate	* Metal Road	*Bank Deposit	*Electricity Connection)

**Table-2.2: Index & definition of the selected Variables for the Study**

Sl. No.	Data Index	Definition of the Variables
1	URPOPU	Percent of Urban Population, 1991 & 2001, 1991-2001.
2	SANTOI	Household having Sanitary Toilet Facilities in Percent, 1991 & 2001, 1991-2001.
3	ELECON	Electricity Connection in per Lakh Population, 1991 & 2001, 1991-2001.
4	DRIWAT	Household having Drinking Water Sources from Tube-well in Percent, 1991 & 2001, 1991-2001.
5	GDPAGR	GDP from Agricultural Sector, 1991 & 2001, 1991-2001.
6	LETERA	Literacy Rate, 1991 & 2001, 1991-2001.
7	URBLIT	Urban Literacy Rate, 1991 & 2001, 1991-2001.
8	PRISCH	Number of Primary School in Per Lakh Population, 1991 & 2001, 1991-2001.
9	SECSCH	Number of Secondary School in Per Lakh Population, 1991 & 2001, 1991-2001.
10	COLLEG	Number of College in Per Lakh Population, 1991 & 2001, 1991-2001.
11	METROA	Length of Metal Road, 1991 & 2001, 1991-2001.
12	SMETROA	Length of Semi-Metal Road, 1991 & 2001, 1991-2001.
13	KUTROA	Length of Kutch Road, 1991 & 2001, 1991-2001.
14	REGRIK	Number of Registered Rickshaws, 1991 & 2001, 1991-2001.
15	BANDEP	Bank Deposit, 1991 & 2001, 1991-2001.
16	MUNICI	Number of Municipalities, 1991 & 2001, 1991-2001.

**The definition and interpretation of the variables are selected for the study are as under:**

1. Urban Population : The population lived in the urban area is called urban population.
2. Literacy Rate : The total quantity of the population who can read and write, is called literacy rate (At least 31.2%)
3. Urban Literacy Rate : The total population of an urban area can read and write, is called urban literacy rate (At least 37.9%)
4. Sanitary Latrine : The system having clean, healthy and developed environment for stooling, is called sanitary latrine.
5. Electricity Connection : The connection supplied for electricity for power generation is called electricity connection.
6. Tube-Well : Tube-well is used to withdraw drinking water from the under ground.
7. GDP from Agriculture : The contribution from agricultural sector to the GDP is called GDP from Agriculture.
8. Primary School : The educational institution having the class one to class five is called primary education. This is the 1st level of education in Bangladesh.
9. Secondary School : The educational institution having the class six to class ten is called secondary education. This is the 2nd level of education in Bangladesh.
10. College : The educational institution where the students are taught higher secondary class to above classes is called college education. This is the 3rd level of education in Bangladesh.
11. Bank Deposit : The money deposited by the depositor or client is called Bank Deposit.
12. Registered Rickshaw : Rickshaws are one of the important & popular transportation media in Bangladesh, especially widely used in urban area than rural area.
13. Metal Road : The important roads which are built up with Concrete or Bituminous Concrete are called Metal Road or Pucca Road. It is usually found in the urban area than rural area.
14. Semi-Metal Road : The roads which are made up with Brick and Stone are called Semi-metal Road or Semi-pucca Road. This kind of roads are found in both the urban and rural area.
15. Kutcha Road : The roads which are made up with clay or soil or sand are called Kutcha Road.
16. Municipalities : The urban area which has a certain administrative boundary and which is directed by a specific law. In respect of Bangladesh, at least 5,000 people must have in this area.

## 2.2.5 Data Processing and Analysis: Tools & Techniques

### 2.2.5.1 Geographical Tools

Various **geographical tools** such as Tables, Percentage, Diagrams and also **GIS for preparing Maps** are used in this study.

### 2.2.5.2 Statistical & Mathematical Tools

Different statistical & mathematical tools, **viz. Mean, Standardized Model (Z-Score) etc.** are used for this study.

To measure level of urbanization and changing pattern of urbanization of the study area, **4 (four) Davidovich Models (1973)** are used in this study to analyze the selected variables, are as under:

#### Model-I: Quantitative Indicators of Change in Levels of Urbanization

$$U_e = \frac{100}{1 + K_r/K_u[100/U_b - 1]} \% \dots \dots \dots \text{Equation...2.1}$$

Here,

**U<sub>b</sub>** = Urbanization level at the beginning of the study period (1991)  
(Urban Population in proportion of the total in percentage)

**U<sub>e</sub>** = Urbanization level at the end of the study period (2001)  
(Urban Population in proportion of the total in percentage)

**K<sub>u</sub>** = Co-efficient of change of Urban Population (which shows by so many times the Urban Population has increased during the period under consideration)

**K<sub>r</sub>** = Co-efficient of change of Rural Population (Which show by so many Times the Rural Population has increased during the period under consideration)

#### Model-II: Increase in level at urbanization

$$I = U_e - U_b \dots \dots \dots \text{Equation 2.2}$$

Here,

**I** = Increase in level at Urbanization can be found from the above formula.

#### Model-III: Quantitative Indicators of Change in the Share of Urban Population of the District in the Total Up of the Region

$$C_e = \frac{100}{1 + K_o/K_u[100/C_b - 1]} \% \dots \dots \dots \text{Equation...2.3}$$

Here,

**C<sub>e</sub>** = The same at the end of the period (2001)

**C<sub>b</sub>** = % of the “Variables” of the districts to total “Variables” of the country at the beginning of the Period (1991)

**K<sub>u</sub>** = Growth Co-efficient of the variables of the district (1991-2001)

**K<sub>o</sub>** = Growth Co-efficient of the variables of all other district of the country (1991-2001)

#### Model-IV: Increase in Level of Urbanization in District

$$I = C_e - C_b \dots \dots \dots \text{Equation ... 2.4}$$

Table-2.4 District-wise Composite Ranking						$X_{16}$	$\sum X$	$x$	Rank
Districts	$X_1$	$X_2$	.....	.....

### 2.2.5.3 Computer Tools

Three renditions of computer, viz. i) MS Word, ii) MS Excel & iii) SPSS 16.0 Version has been used in the proposed study.

### 2.3 Conclusion

The research methodology is very important for any kinds of scientific research. This chapter highlighted the study methodology for doing a meaningful research have been followed for this research.

In the next chapter, spatial pattern of urbanization of the study area for 1991 will be discussed as a picture of the study area.

## **Chapter Three**

### **Spatial Pattern of Urbanization of the study Area: 1991**

- 3.1 Introduction
- 3.2 Spatial Pattern of Urbanization of the Study Area: 1991
  - 3.2.1 Spatial Pattern of Urban Population of the Study Area: 1991
  - 3.2.2 Spatial Pattern of Sanitary Latrine Facilities of the Study Area: 1991
  - 3.2.3 Spatial Pattern of Electricity Connection of the Study Area: 1991
  - 3.2.4 Spatial Pattern of the sources of drinking water (Tube-well) of the Study Area: 1991
  - 3.2.5 Spatial Pattern of Agricultural contribution to the GDP of the Study Area: 1991
  - 3.2.6 Spatial Pattern of literacy Rate of the Study Area: 1991
  - 3.2.7 Spatial Pattern of urban Literacy Rate of the Study Area: 1991
  - 3.2.8 Spatial Pattern of Primary School of this Study Area: 1991
  - 3.2.9 Spatial Pattern of Secondary School of the Study Area: 1991
  - 3.2.10 Spatial Pattern of Colleges of the Study Area: 1991
  - 3.2.11 Spatial Pattern of Bank Deposit of the Study Area: 1991
  - 3.2.12 Spatial Pattern of Registered Rickshaws of the Study Area: 1991
  - 3.2.13 Spatial Pattern of Metal Road of the Study Area: 1991
  - 3.2.14 Spatial Pattern of Semi-Metal Road of the Study Area: 1991
  - 3.2.15 Spatial Pattern of Kutcha Road of the Study Area: 1991
  - 3.2.16 Spatial Pattern of Municipalities of the Study Area: 1991
- 3.3 Conclusion

## **Chapter Three**

### **Spatial Pattern of Urbanization of the study Area: 1991**

#### **3.1 Introduction**

Bangladesh is one of the developing countries of the South Asia, even in the world. In the recent times, the population of Bangladesh is increasing alarmingly and this increase is very high from rural to urban areas due to rural urban migration. The people of rural area migrate to urban area due to natural increase of population, natural hazards, poverty and deficiency of various kinds of facilities.

Though the increase of urban population is very high but the level of urbanization is very low. In the present study, the spatial pattern of urbanization of the study area for 1991 to the context of the country has been discussed. 16-variables have been selected for this study which are very much related with the level of urbanization and urban facilities or amenities. This chapter, the spatial pattern of urbanization of the study area for 1991 have been focused & highlighted on the basis of the selected important 16-variables.

#### **3.2 Spatial Pattern of Urbanization of the Study Area: 1991.**

##### **3.2.1 Spatial Pattern of Urban Population of the Study Area: 1991**

The rate of the urban population is a very important indicator of urbanization in a region. The degrees of urbanization is assessed on the basis of rate of urban population. The urbanization in Bangladesh is not uniform and resultantly, except few districts of the country, very few of the total population lives in urban area. In fact, the rate of population is high in those districts where the educational and socio-economic facilities are available. The real picture of the study area in this regard has been shown below in the Table-3.2.1 and Map-3.1.

Table-3.2.1: Spatial Pattern of Urban Population of the Study Area to the context of the country based on Z- Score: 1991

Sl. No	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.02643	---(Country total 1)	-----
2.	<b>High</b>	2.83322-4.02643	-----	-----
3.	<b>Medium</b>	1.64000-2.83321	---(Country total 3)	-----
4.	<b>Low</b>	0.44678-1.63999	4 (Country total 9)	Rajshahi, Nawabgonj, Pabna, Rangpur.
5.	<b>Very Low</b>	-0.74644-0.44677	12 (Country total 51)	Kurigram, Nilphamari, Dinajpur, Natore, Sirajganj, Bogra, Joypurhat, Lalmonirhat, Thakurgaon, Panchagarh, Naogaon, Gaibandha.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.2.1 and Map-3.1, it is observed that no districts of the study area found in the very high, high and medium stages. On the other hand, 4-districts like Rajshahi, Nawabgonj, Pabna, Rangpur found in low stage out of total 9-districts found in very low stage out of the country total 51 districts.

### 3.2.2 Spatial Pattern of Sanitary Latrine Facilities of the Study Area: 1991

Sanitary Latrine facilities is very important for sound health. But being a developing country, it is very difficult to ensure sanitary latrine for all peoples of Bangladesh. Like rural area, the number of sanitary latrine in the study area is not in satisfactory level. To assess the district-wise pattern of sanitary latrine use of the study-area shown in the following Table-3.2.2 and Map-3.2.

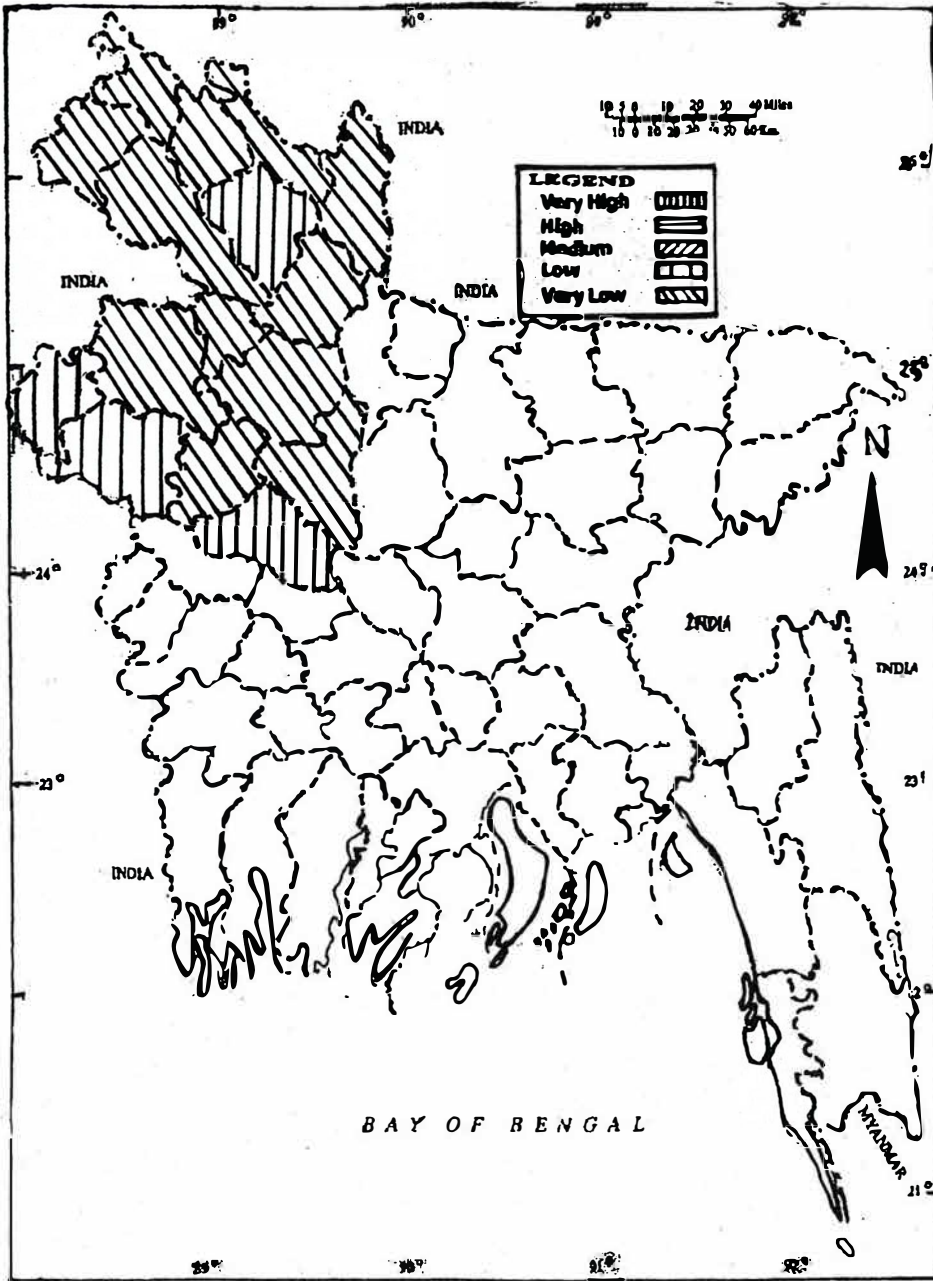

Table-3.2.2: Spatial Pattern of Sanitary Latrine of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.38492	--(Country total 1)	-----
2.	<b>High</b>	3.04126-4.38492	-----	-----
3.	<b>Medium</b>	1.69757-3.04125	---(Country total 3)	-----
4.	<b>Low</b>	0.35392-1.69758	---(Country total 9)	-----
5.	<b>Very Low</b>	-0.98975-0.35391	16 (Country total 51)	Rajshahi, Bogra, Pabna, Joypurhat, Dinajpur, Rangpur, Natore, Nilphamari, Naogaon, Nawabgonj, Thakurgaon, Sirajganj, Panchagarh, Kurigram, Lalmonirhat, Gaibandha.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

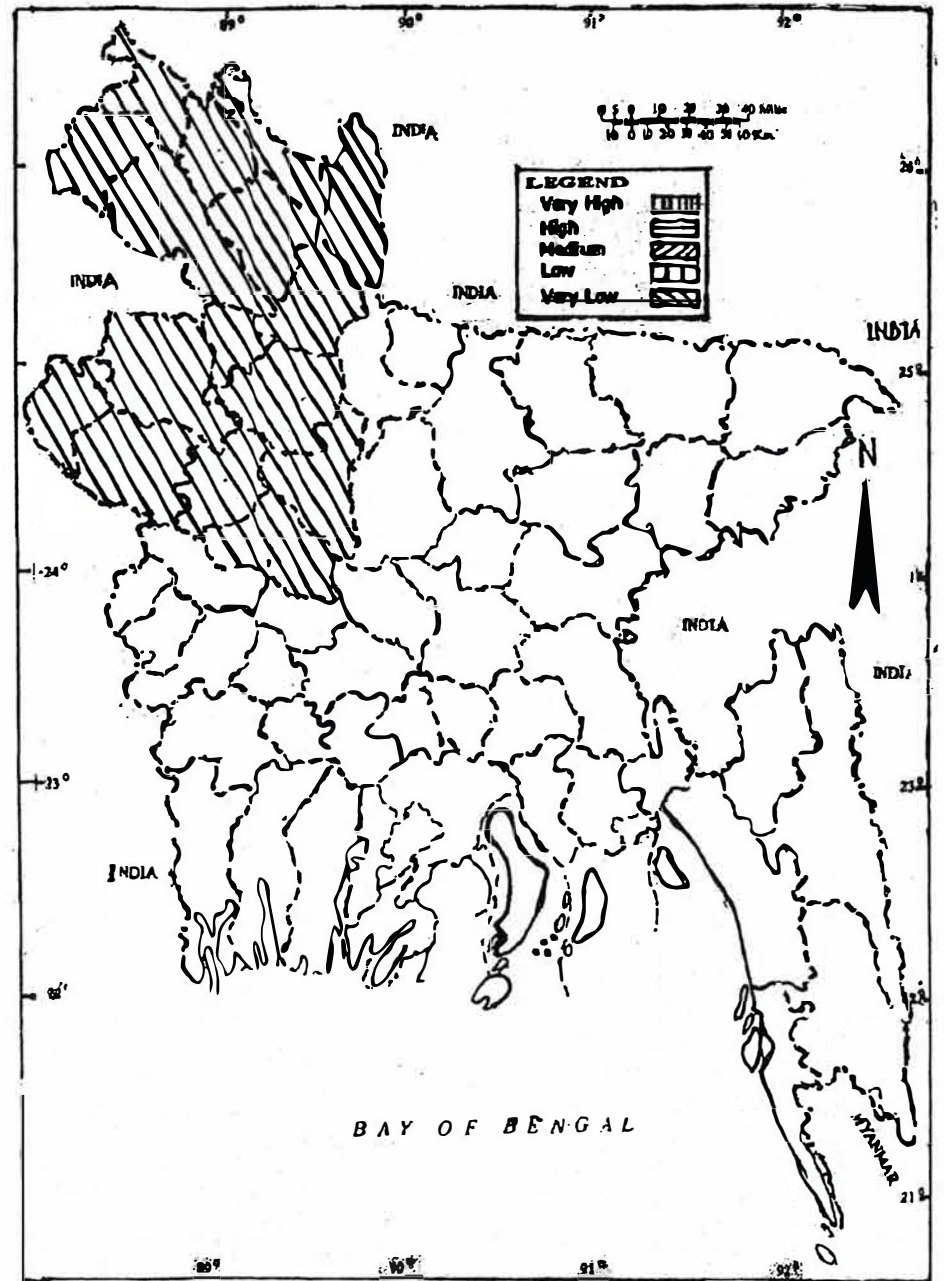

3.1: Spatial Pattern of Urban Population of the Study Area: 1991

23

Source: Table-3.2.1.

3.2: Spatial Pattern of Sanitary Latrine of the Study Area: 1991

Source: Table-3.2.2.

From the Table-3.2.2 and Map-3.2 it is revealed that 16-districts (Rajshahi, Bogra, Pabna, Joypurhat, Dinajpur, Rangpur, Natore, Nilphamari, Naogaon, Nawabganj, Thakurgaon, Sirajganj, Panchagarh, Kurigram, Lalmonirhat, Gaibandha.) of the study area in the very low stage in respect of sanitary latrine use where in country total 51 districts.

### 3.2.3 Spatial Pattern of Electricity Connection of the Study Area: 1991

Electricity connection is one of the most important indicator of urbanization and development. Electricity connection in similar scale found in the rural area of Bangladesh. This facility is available in the urban area of Bangladesh but not ensured for all. The production of electricity is low in quantity but demand is high. One the other hand, the required supply system is absent and for this reason, many people of urban area deprived from the electricity connections. The information regarding electricity connection facility of the study area has been shown in the following Table-3.2.3 and Map-3.3.

Table-3.2.3: Spatial Pattern of Electricity Connection of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.10921	---(Country total 1)	-----
2.	<b>High</b>	2.06926-3.10921	---(Country total 2)	-----
3.	<b>Medium</b>	1.01669-2.06295	---(Country total 5)	-----
4.	<b>Low</b>	-0.02958-1.01668	8 (Country total 20)	Pabna, Bogra, Rajshahi, Natore, Rangpur, Dinajpur, Joypurhat, Thakurgaon.
5.	<b>Very Low</b>	-1.07584- -0.02957	8 (Country total 36)	Sirajganj, Nilphamari, Nawabganj, Naogaon, Lalmonirhat, Gaibandha, Panchagarh, Kurigram.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

The Table-3.2.3 and Map-3.3 reveals that 8-districts like Pabna, Bogra, Rajshahi, Natore, Rangpur, Dinajpur, Joypurhat, Thakurgaon of the study area are in the low stage and 8-districts like Sirajganj, Nilphamari, Nawabganj, Naogaon, Lalmonirhat, Gaibandha, Panchagarh, Kurigram of the study area are in the very low stage out of country total 20-districts and 36-districts respectively.

### 3.2.4 Spatial Pattern of the Sources of Drinking Water (Tube-well) of the Study Area: 1991

As a source of drinking water, water supply connection in very urban house by the urban authority is very desired matter but it is not sufficient in the urban area of Bangladesh. So, tube-well is the main source of drinking water in the urban area of Bangladesh and the number of tube-well is high in the urban area. The district-wise (inter-district) pattern of tube-well use as a source of drinking water of the study area shown below in the Table--3.2.4 and Map--3.4 on the basis of Z-Score value.

Table-3.2.4: Spatial Pattern of Sources of Drinking Water (Tube-Well) of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.22108	12 (Country total 35)	Joypurhat, Natore, Bogra, Dinajpur, Sirajganj, Kurigram, Naogaon, Pabna, Gaibandha, Thakurgaon, Rajshahi, Nawabganj.
2.	<b>High</b>	-0.74077-0.22108	2 (Country total 16)	Rangpur, Lalmonirhat.
3.	<b>Medium</b>	-1.70261-0.74077	1 (Country total 3)	Nilphamari.
4.	<b>Low</b>	-2.66445- -1.70260	1 (Country total 8)	Panchagarh.
5.	<b>Very Low</b>	-3.62628- -2.6644	---(Country total 2)	
		<b>Total</b>	<b>16</b> (Country total 64)	-----

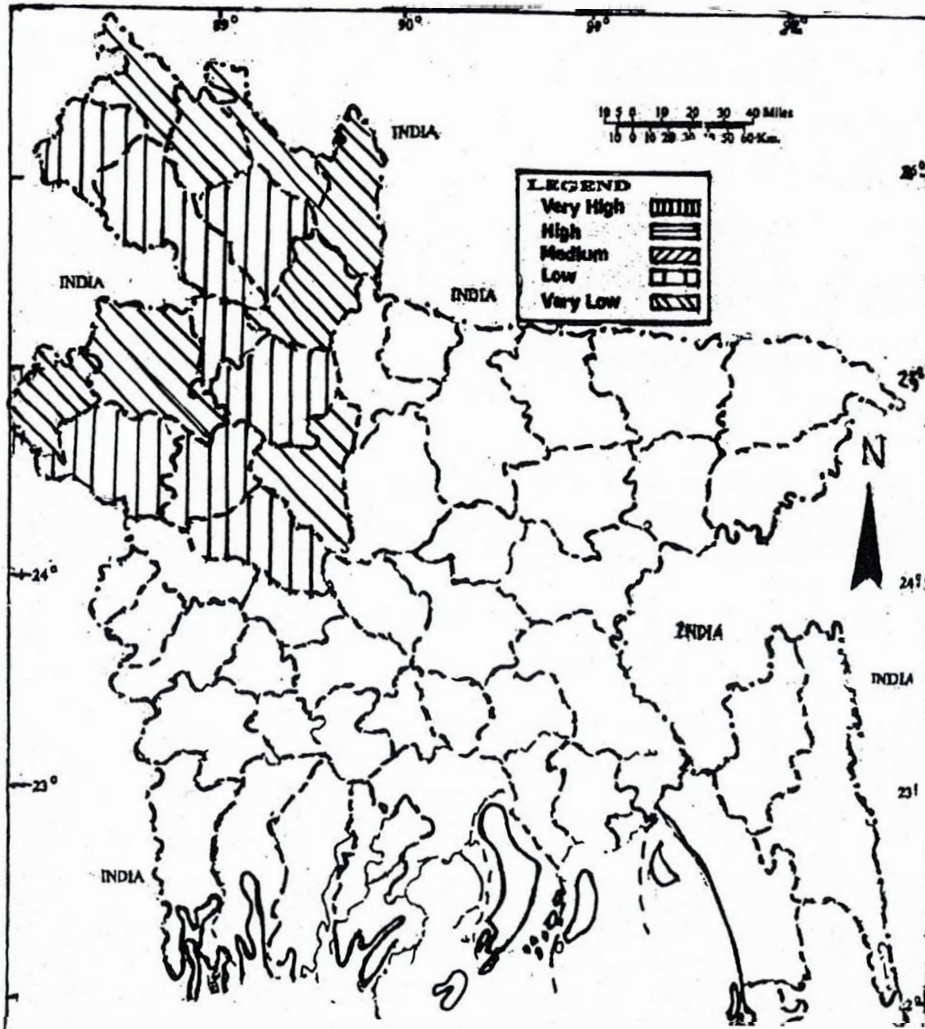

Source: Based on Appendix-3.

From the Table-3.2.4 and Map-3.4 it is found that 12-district like Sirajganj, Nilphamari, Nawabganj, Naogaon, Lalmonirhat, Gaibandha, Panchagarh, Kurigram of the study area are in the very high stage in respect of tube-well as a main sources of drinking water out of the country total 12-districts (same) and only 2-districts like Rangpur, Lalmonirhat are in the high stage out of country total 16-districts, only 1-district Niphamari in the medium stage and also only 1-district Panchagarh is in the very low stage out of country total 8-districts. So, the condition of the study area is satisfactory in respect of tube-well use as a source of drinking water.

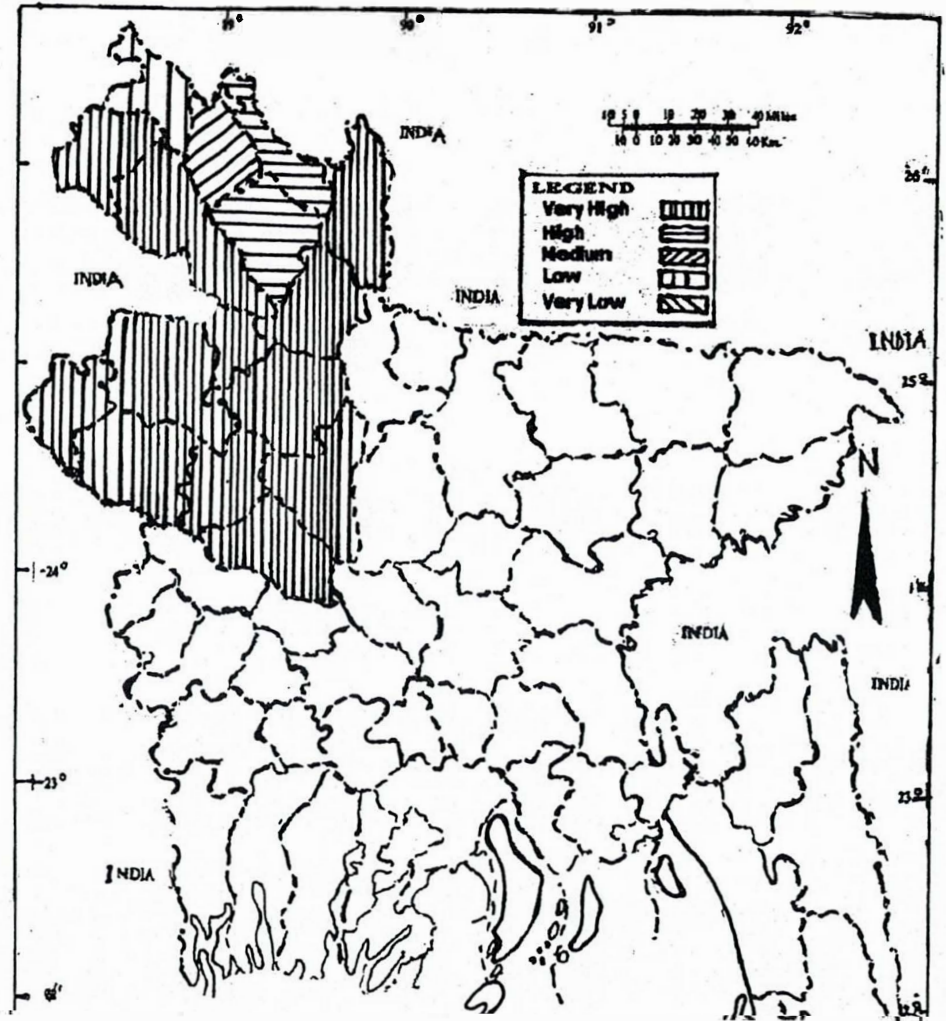

3.3: Spatial Pattern of Electricity Connection of the Study Area: 1991

26

BAY OF BENGAL

3.4: Spatial Pattern of Sources of Drinking Water (Tube-Well) of the Study Area: 1991

BAY OF BENGAL

### 3.2.5 Spatial Pattern of Agricultural Contribution to the GDP of the Study Area: 1991

The contribution of the agro-Based districts to the economy of Bangladesh is remarkable agriculture is considered a primary type of economic activity and agricultural activities in small scale found in the urban area. Secondary activities and economic activities are mostly found in the urban area. The districts whose area contributing much to the agri-sector are called comparatively least urbanized area. The district-wise picture of the study area of the same has shown bellow in the Table-3.2.5 and Map-3.5.

Table-3.2.5: Spatial Pattern of Agricultural Contribution to the GDP of the Study Area to the context of the Country based on Z- Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.12702	---(Country total 1)	-----
2.	<b>High</b>	1.14737-2.12702	3 (Country total 5)	Naogaon, Dinajpur, Bogra.
3.	<b>Medium</b>	0.16771-1.14736	5 (Country total 22)	Rangpur, Gaibandha, Kurigram, Natore, Pabna.
4.	<b>Low</b>	-0.81194-1.16770	7 (Country total 24)	Rajshahi, Sirajganj, Nilphamari, Thakurgaon, Nawabganj, Lalmonirhat, Joypurhat.
5.	<b>Very Low</b>	-1.7916- -0.81193	1 (Country total 13)	Panchagarh.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

The Table-3.2.5 and Map-3.5 reveals that 03-districts like Naogaon, Dinajpur, Bogra of the study area are in the high category out of country total 5-districts, 5-districts like Rangpur, Gaibandha, Kurigram, Natore, Pabna are in the medium category out of country total 22-districts, 7-districts like Rajshahi, Sirajganj, Nilphamari, Thakurgaon, Nawabganj, Lalmonirhat, Joypurhat are in the low category out of country total 24-districts and only 1-district like Panchagarh is in the very low category out of country total 13-districts in respect of Agricultural contribution to the GDP of the country indicates the poor level of urbanization of the study area.

### 3.2.6 Spatial Pattern of Literacy Rate of the Study Area: 1991

Education is one of the basic demand of the people. Development and education is very much related. Balanced development in literacy rate and the educational condition of Bangladesh is not satisfactory till now and major portion of the people deprived from the light of education. The spatial pattern of literacy rate has shown in the Table-3.2.6 and Map-3.6.

Table-3.2.6: Spatial Pattern of Literacy Rate of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.08888	---(Country total 3)	-----
2.	<b>High</b>	1.19399-2.08888	---(Country total 5)	-----
3.	<b>Medium</b>	0.29911-1.93980	---(Country total 13)	-----
4.	<b>Low</b>	-0.55957-0.29910	<b>11</b> (Country total 21)	Panchagarh, Rajshahi, Joypurhat, Dinajpur, Bogra, Naogaon, Thakurgaon, Sirajganj, Natore, Pabna, Rangpur.
5.	<b>Very Low</b>	-1.49068- -0.55956	<b>5</b> (Country total 23)	Nilphamari, Gaibandha, Nawabganj, Lalmonirhat, Kurigram.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.2.6 and Map-3.6, it is observed that 11-districts like Panchagarh, Rajshahi, Joypurhat, Dinajpur, Bogra, Naogaon, Thakurgaon, Sirajganj, Natore, Pabna, Rangpur are in the low stage out of country total 21-districts and 5-districts like Nilphamari, Gaibandha, Nawabganj, Lalmonirhat, Kurigram are in the very low stage out of country total 23-districts and no districts of the study area found in the very high, high and medium stage, indicates the lower condition of the study area in respect of literacy rate.

3.5: Spatial Pattern of Agricultural Contribution to the GDP of the Study Area: 1991

29

Source: Table-3.2.5.

3.6: Spatial Pattern of Literacy Rate of the Study Area: 1991

Source: Table-3.2.6

### 3.2.7 Spatial Pattern of Urban Literacy Rate of the Study Area: 1991

Generally the educational and environmental facilities are available in the urban area than that of the rural area due to infrastructural development. The urban literary rate is higher than rural literary rate and the literacy rate found high in the developed districts.

The district-wise urban literacy rate of the study area has shown in the following Table-3.2.7 and Map-3.7.

Table-3.2.7: Spatial Pattern of Urban Literacy Rate of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.34255	---(Country total 5)	-----
2.	<b>High</b>	0.46640-1.34255	2 (Country total 19)	Bogra, Panchagarh.
3.	<b>Medium</b>	-0.40977-0.46639	9 (Country total 20)	Dinajpur, Joypurhat, Pabna, Naogaon, Nilphamari, Natore, Rajshahi, Rangpur, Thakurgaon.
4.	<b>Low</b>	-1.28591- -0.40976	2 (Country total 12)	Gaibandha, Sirajganj.
5.	<b>Very Low</b>	-2.16208- -1.28590	3 (Country total 8)	Nawabganj, Lalmonirhat, Kurigram.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the above Table-3.2.7 and Map-3.7, it is formed that only 02-districts like Bogra and Phachagarh are in the high stage out of country total 19-districts, 9-districts like Dinajpur, Joypurhat, Pabna, Naogaon, Nilphamari, Natore, Rajshahi, Rangpur, Thakurgaon in medium stage out of country total 20-districts, 2-districts like Gaibandha, Sirajgonj are in the low stage out of the country total 12-districts, 3-districts like Nawabganj, Lalmonirhat, Kurigram are in the very low stage out of country total 18-districts, indicates for literacy rate of the study area.

### 3.2.8 Spatial Pattern of Primary School of this Study Area: 1991

To the expansion of education, Primary schools are in the 1st level. For the introduction of primary education for al in Bangladesh, the villagers have been started to establish Primary School. Educational condition of a region can be realized by calculation of number of Primary schools in per lak population. The information regarding primary schools of the study area shown below.

Table-3.2.8: Spatial Pattern of Primary School of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.33400	---(Country total 3)	-----
2.	<b>High</b>	1.18127-2.33400	---(Country total 1)	-----
3.	<b>Medium</b>	0.02817-0.18126	3 (Country total 16)	Panchagarh, Thakurgaon, Dinajpur.
4.	<b>Low</b>	-1.12491- -0.02816	4 (Country total 11)	Sirajganj, Bogra, Nilphamari, Gaibandha.
5.	<b>Very Low</b>	-2.27803- -1.12490	9 (Country total 33)	Rangpur, Nawabganj, Rajshahi, Lalmonirhat, Pabna, Naogaon, Kurigram, Joypurhat, Natore.
	<b>Total</b>		<b>16</b> (Country total 64)	

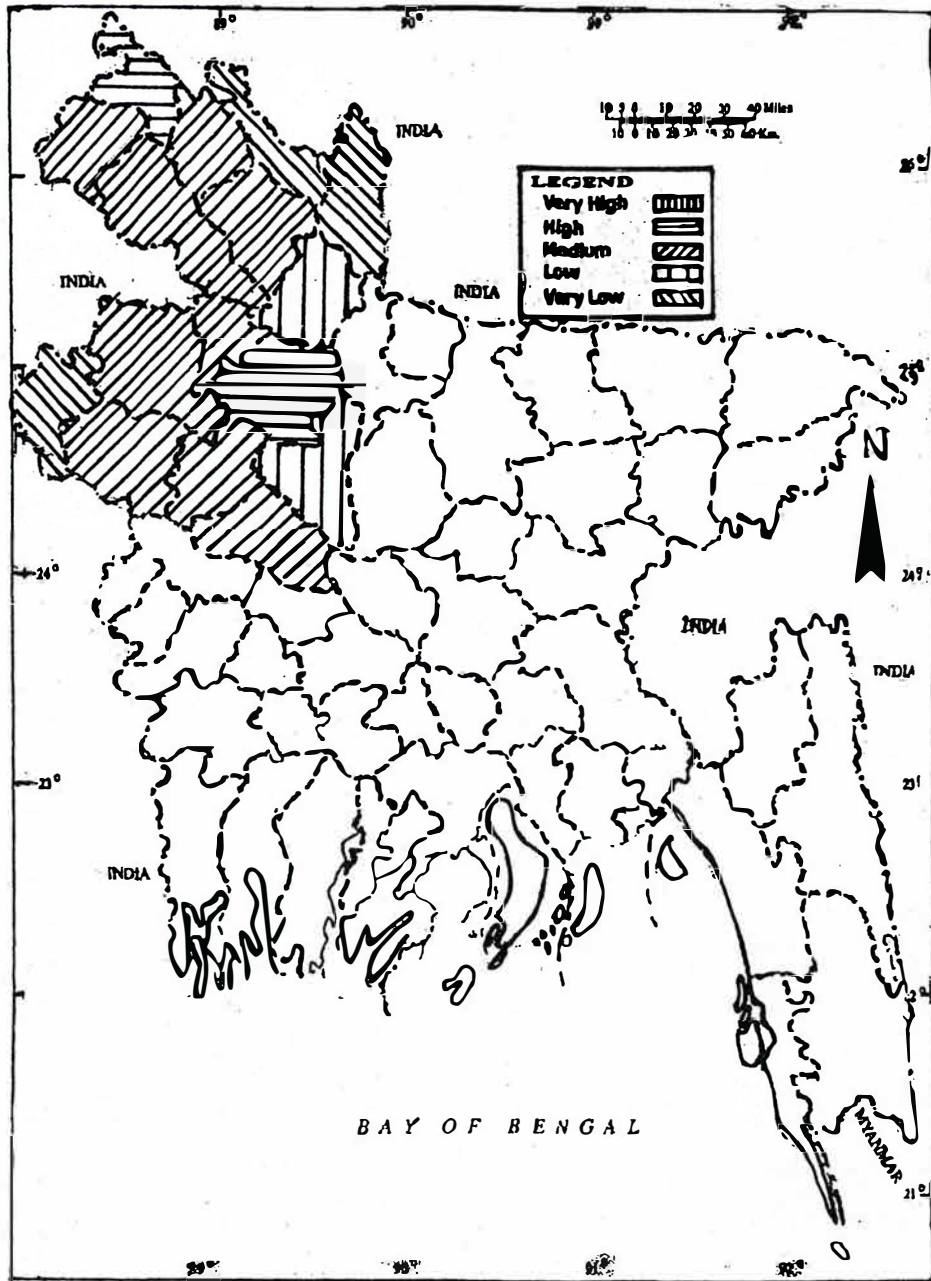

Source: Based on Appendix-3.

From the Table-3.2.8 and Map-3.8 found that only 3-districts like Panchagarh, Thakurgaon, Dinajpur of the study area are in the medium stage out of country total 16-districts, 4-districts like Sirajganj, Bogra, Nilphamari, Gaibandha are in the low stage out of country total 11-districts and 9-districts like Rangpur, Nawabganj, Rajshahi, Lalmonirhat, Pabna, Naogaon, Kurigram, Joypurhat, Natore are in the very low stage out of country total 33-districts and no district of the study area found in the very high and high stage in reject of number of Primary schools.

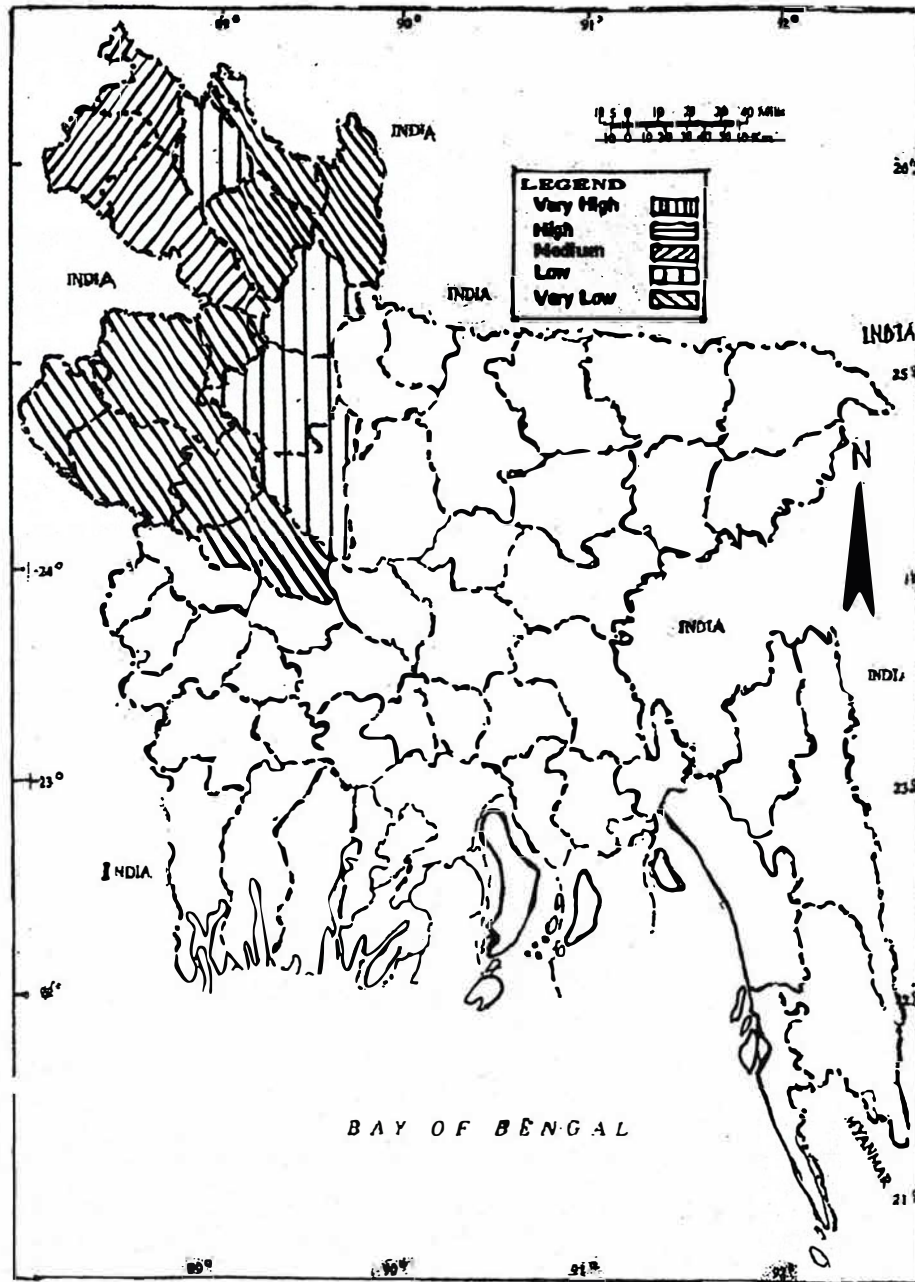

32

Source: Table - 3.2.7.

3.8: Spatial Pattern of Primary School of the Study Area: 1991

Source: Table - 3.2.8.

### 3.2.9 Spatial Pattern of Secondary School of the Study Area: 1991

The secondary school are in the 2nd level of education in Bangladesh. The number of Secondary Schools are less than Primary schools. The numbers of Secondary Schools are not satisfactory in all districts of the country, which is shown below in the Table- 3.29 and Map- 3.9.

Table-3.2.9: Spatial Pattern of Secondary School of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.23579	---(Country total 1)	Panchagarh. Dinajpur, Nawabganj, Rajshahi, Naogaon, Thakurgaon, Joypurhat, Bogra, Gaibandha. Rangpur, Natore, Lalmonirhat, Nilphamari, Sirajganj, Kurigram, Pabna.
2.	<b>High</b>	1.09302-2.23579	1 (Country total 7)	
3.	<b>Medium</b>	-0.04978- -1.09301	8 (Country total 21)	
4.	<b>Low</b>	-1.19256- -0.04977	7 (Country total 31)	
5.	<b>Very Low</b>	-2.33534- -1.19255	---(Country total 3)	
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.29 and Map-3.9 found that only 1-district like Panchagarh of the study area is in the high stage out of the country total 7-districts, 8-districts like Dinajpur, Nawabganj, Rajshahi, Naogaon, Thakurgaon, Joypurhat, Bogra, Gaibandha are in the medium stage out of country total 21-districts and 7-districts like Rangpur, Natore, Lalmonirhat, Nilphamari, Sirajganj, Kurigram, Pabna are in the low stage out of country total 31-districts and no districts of the study area have been found in the very high (satisfactory) stage.

### 3.2.10 Spatial Pattern of Colleges of the Study Area: 1991

According to the demand of higher education of the country, very few institutions are have been found & established. The number of colleges shown in the Table-3.2.10 and Map-3.10.

Table-3.2.10: Spatial Pattern of Colleges of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 5.98132	---(Country total 1)	Rajshahi, Natore, Dinajpur, Panchagarh, Nawabganj, Thakurgaon, Rangpur, Bogra, Joypurhat, Kurigram, Pabna, Nilphamari, Lalmonirhat, Gaibandha, Sirajganj, Naogaon.
2.	<b>High</b>	4.38608-5.98132		
3.	<b>Medium</b>	2.79082-4.38607		
4.	<b>Low</b>	1.19557-2.79081		
5.	<b>Very Low</b>	-0.39969-1.19556	16 (Country total 63)	
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

3.9: Spatial Pattern of Secondary School of the Study Area: 1991

Source: Table-3.2.9

3.10: Spatial Pattern of Colleges of the Study Area: 1991

Source: Table-3.2.10

From the Table-3.2.10 and Map-3.10 found that no district of the study area is in the very high, high, medium, low stage and 16-districts like Rajshahi, Natore, Dinajpur, Panchagarh, Nawabganj, Thakurgaon, Rangpur, Bogra, Joypurhat, Kurigram, Pabna, Nilphamari, Lalmonirhat, Gaibandha, Sirajganj, Naogaon of the study area are in the very low stage out of country total 63-districts which indicates that number of colleges in the study area are very little.

### 3.2.11 Spatial Pattern of Bank Deposit of the Study Area: 1991

Deposit status of Bangladesh is not satisfactory. The impact of savings to build up capital is significant. District-wise Bank Deposit pattern of the study area has shown in the following Table- 3.2.11 and Map- 3.11.

Table-3.2.11: Spatial Pattern of Bank Deposit of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z- Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 5.96863	---(Country total 1)	-----
2.	<b>High</b>	4.41516-5.596863	-----	-----
3.	<b>Medium</b>	2.86169-4.41515	---(Country total 1)	-----
4.	<b>Low</b>	1.30821-2.86168	-----	-----
5.	<b>Very Low</b>	-0.24527-1.30820	16 (Country total 62)	Rajshahi, Bogra, Pabna, Rangpur, Dinajpur, Sirajganj, Nawabganj, Natore, Naogaon, Nilphamari, Gaibandha, Thakurgaon, Joypurhat, Kurigram, Panchagarh, Lalmonirhat.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix- 3.

From the Table-3.2.11 and Map-3.11 found that 16-districts of like Rajshahi, Bogra, Pabna, Rangpur, Dinajpur, Sirajganj, Nawabganj, Natore, Naogaon, Nilphamari, Gaibandha, Thakurgaon, Joypurhat, Kurigram, Panchagarh, Lalmonirhat of the study area are in the very low stage in respect of Bank deposits out of country total 62-districts.

### 3.2.12 Spatial Pattern of Registered Rickshaws of the Study Area: 1991

Rickshaws are the main transportation media of the people of Bangladesh. It is used much in the country to go to the near district area and the record of Bangladesh is high in the world. Majority Rickshaws are used in the urban area which has created the employment

opportunities to the urban area. The spatial pattern of registered rickshaws has shown in the following Table-3.2.12 and Map-3.12.

Table-3.2.12: Spatial Pattern of Registered Rickshaws of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.48221	---(Country total 1)	-----
2.	<b>High</b>	3.36293-4.84221	-----	-----
3.	<b>Medium</b>	1.88243-3.36232	---(Country total 1)	-----
4.	<b>Low</b>	0.40254-1.88242	4 (Country total 7)	Rangpur, Bogra, Rajshahi, Nilphamari.
5.	<b>Very Low</b>	-1.07736-0.40253	12 (Country total 55)	Gaibandha, Pabna, Natore, Dinajpur, Joypurhat, Sirajganj, Thakurgaon, Lalmonirhat, Nawabganj, Kurigram, Panchagarh.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

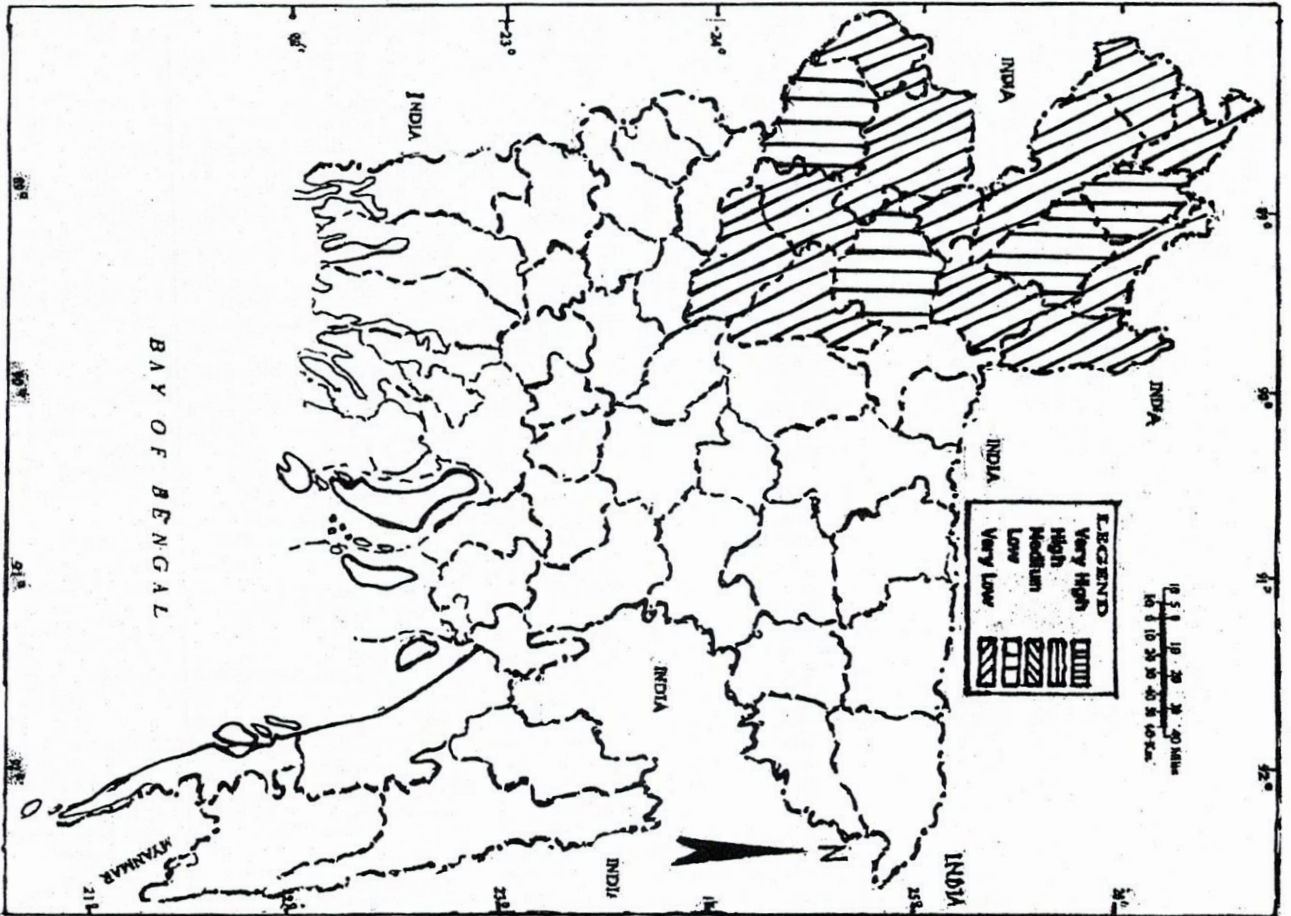

From the Table-3.2.12 and Map-3.12 found that only 4-districts like Rangpur, Bogra, Rajshahi, Nilphamari are in the low stage in respect of number of registered rickshaws out of the country total 7-districts and rest 12-districts of the study area Gaibandha, Pabna, Natore, Dinajpur, Joypurhat, Sirajganj, Thakurgaon, Lalmonirhat, Nawabganj, Kurigram, Panchagarh are in the very low stage out of country total 55-districts and no districts of the study area found in the very high, high & medium stage.

3.11: Spatial Pattern of Bank Deposit of the Study Area: 1991

Source: Table-3.2.11

3.12: Spatial Pattern of Registered Richshaws of the Study Area: 1991

Source: Table-3.2.12

### 3.2.13 Spatial Pattern of Metal Road of the Study Area: 1991

Road is the principal communication system of Bangladesh. Metal Road, Semi-Metal Road and Kutcha Road are the communication system of Bangladesh. District-wise pattern of Metal Road shown in the following Table-3.2.13 and Map-3.13.

Table-3.2.13: Spatial Pattern of Metal Road of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.41954	<b>1</b> (Country total 2)	Rajshahi.
2.	<b>High</b>	2.30937-3.41954	---(Country total 1)	-----
3.	<b>Medium</b>	1.199157-2.30936	---(Country total 1)	-----
4.	<b>Low</b>	0.08901-1.99186	<b>4</b> (Country total 10)	Dinajpur. Pabna. Rangpur. Kurigram.
5.	<b>Very Low</b>	-1.02117-0.08900	<b>11</b> (Country total 51)	Bogra. Naogaon. Thakurgaon. Natore. Nilphamari. Sirajganj. Panchagarh. Gaibandha. Nawabganj. Lalmonirhat. Joypurhat.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.2.13 and Map-3.13 it is observed that the status of Rajshahi district in respect of length of Metal Road is in the very stage (1st stage) out of country total 2-districts, 4-districts of in low stage out of country total 10-districts, 11-districts in the very low stage out of country total 51-districts.

### 3.2.14 Spatial Pattern of Semi-Metal Road of the Study Area: 1991

Semi-Metal Road is the connecting road and it has the great impact for connecting the rural area to the urban area. Semi-metal Road transformed into the metal Road after a period of time. The district-wise pattern of Semi-metal Road of the study area shown in the Table-3.2.14 and Map-3.14.

Table-3.2.14: Spatial Pattern of Semi-Metal Road of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.61972	---(Country total 1)	
2.	<b>High</b>	3.25588-4.61972	-----	
3.	<b>Medium</b>	1.89203-3.25587	---(Country total 1)	
4.	<b>Low</b>	0.52816-1.89202	<b>1</b> (Country total 9)	Rajshahi.
5.	<b>Very Low</b>	-0.83568-0.52815	<b>15</b> (Country total 53)	Bogra. Pabna. Rangpur. Sirajganj. Naogaon. Gaibandha. Kurigram. Joypurhat. Natore. Nilphamari. Dinajpur. Lalmonirhat. Nawabganj. Thakurgaon. Panchagarh.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

Source: Table-3.2.13

Source: Table-3.2.14

From the Table- 3.2.14 and Map- 3.14 found that only Rajshahi district in the low stage (4th stage) in respect of semi-metal Road out of country total 19-districts and the rest 15-districts of like Bogra, Pabna, Rangpur, Sirajganj, Naogaon, Gaibandha, Kurigram, Joypurhat, Natore, Nilphamari, Dinajpur, Lalmonirhat, Nawabganj, Thakurgaon, Panchagarh of the study area are in the last stage (very low) out of country total 53-districts.

### 3.2.15 Spatial pattern of Kutcha Road of the Study Area : 1991

Kutcha Road is the main communication system of the rural people. It takes time to convert into Metal & Semi-Metal Road. The district-wise pattern of Kutcha Road shown in the following Table-3.2.15 and Map-3.15.

Table-3.2.15: Spatial Pattern of Kutcha Road of the Study Area to the context of the Country based on Z-Score: 1991

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.55361	1 (Country total 1)	Rajshahi.
2.	<b>High</b>	2.38070-3.55361	---(Country total 1)	-----
3.	<b>Medium</b>	1.20778-2.38069	1 (Country total 5)	Dinajpur.
4.	<b>Low</b>	0.03486-1.20777	7(Country total 16)	Rangpur, Naogaon, Bogra, Kurigram, Thakurgaon, Pabna, Lalmonirhat.
5.	<b>Very Low</b>	-1.13806-0.03485	7 (Country total 41)	Gaibandha, Nilphamari, Sirajganj, Natore, Panchagarh, Nawabganj, Joypurhat.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.2.15 and Map-3.15 found that only 1-district namely Rajshahi is in the very high stage (1st stage) out of country total 1-district, only 1-district namely Dinajpur in the medium stage out of the country total 5-districts, 7-districts like Rangpur, Naogaon, Bogra, Kurigram, Thakurgaon, Pabna, Lalmonirhat are in the low stage out of country total 16-districts and 7-districts like Gaibandha, Nilphamari, Sirajganj, Natore, Panchagarh, Nawabganj, Joypurhat are in the very low stage (last stage) in respect of Kutcha Road.

### 3.2.16 Spatial Pattern of Municipalities of the Study Area : 1991

In the urbanization of Bangladesh, some unions have been improved into the Poursava in addition to the existing districts. The district-wise pattern of Municipalities of the Study area shown in the following Table-3.2.16 and Map- 3.16.

Table-3.2.16: Spatial Pattern of Municipalities of the Study Area to the context of the Country based on Z-Score: 1991

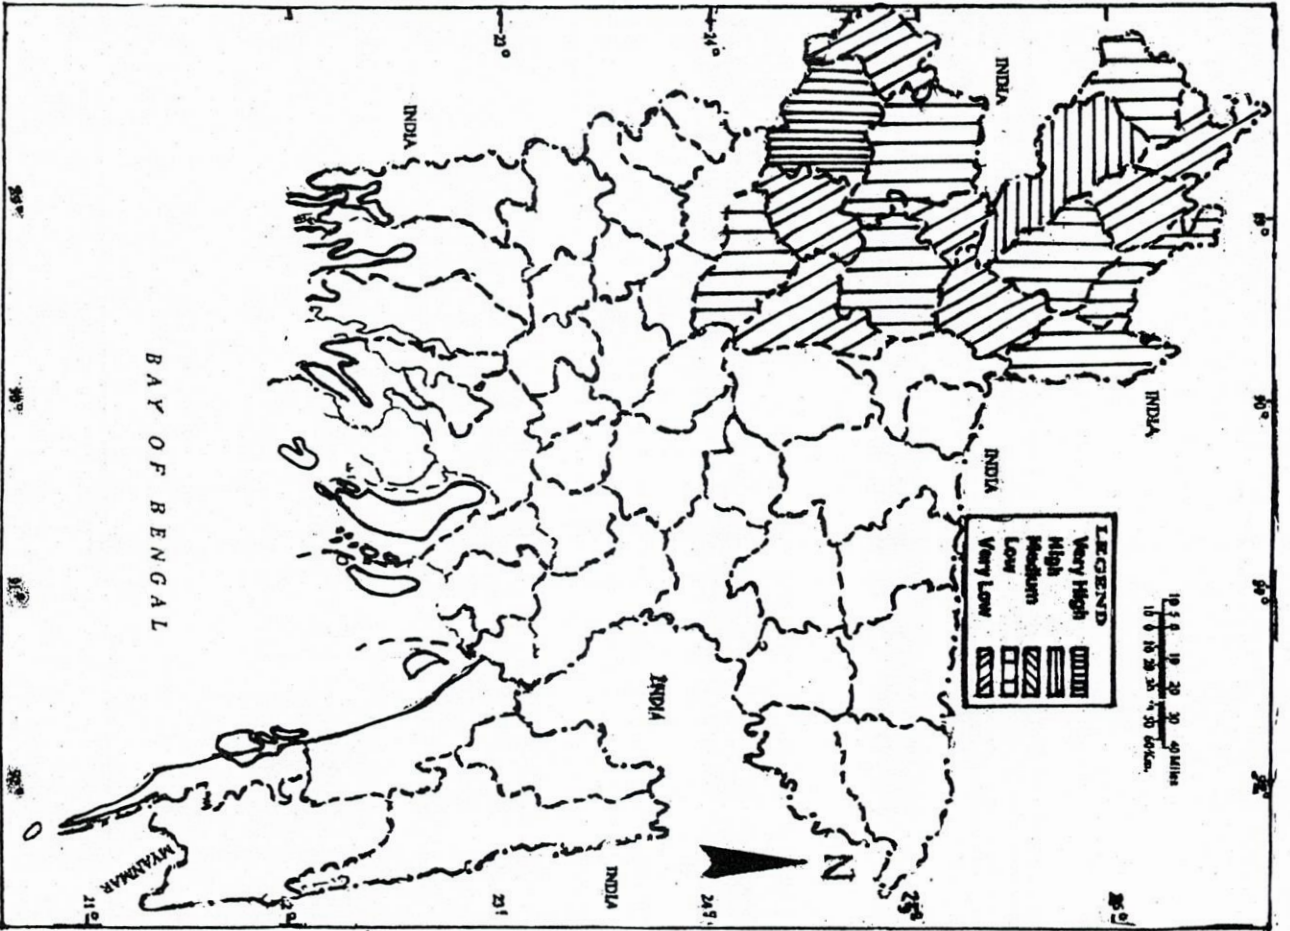

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.5417	---(Country total 1)	-----
2.	<b>High</b>	1.64918-2.54174	---(Country total 1)	-----
3.	<b>Medium</b>	0.75660-1.64917	5 (Country total 14)	Bogra, Dinajpur, Pabna, Sirajganj, Nawabganj.
4.	<b>Low</b>	-0.13598-0.75659	5 (Country total 24)	Thakurgaon, Rajshahi, Natore, Rangpur, Nilphamari.
5.	<b>Very Low</b>	-1.02855- -0.13597	6 (Country total 24)	Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-3.

From the Table-3.2.16 and Map-3.16 observed that 5-districts like Bogra, Dinajpur, Pabna, Sirajganj, Nawabganj of the study area are in the 3rd stage (medium category) out country total 14-districts, 5-districts like Thakurgaon, Rajshahi, Natore, Rangpur, Nilphamari are in the 4th stage (low category) out of the country total 24-districts and the rest 6-districts like Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat are in the last stage (very low category) out of country total 24-districts.

Source: Table-3.2.15

3.16: Spatial Pattern of Municipalities of the Study Area: 1991

Source: Table-3.2.16

### **3.3 Conclusion**

Selected variables of the study has been discussed on the basis of spatial aspect and have been found that the urbanization pattern of the study area is not uniform. Some new municipalities or panchayats has been increased day by day but this picture is not even or uniform in urban development. This chapter highlighted the spatial feature of urbanization in 1991.

In the following chapter, spatial pattern of urbanization of the study area for 2001 has been discussed.

## **Chapter Four**

### **Spatial Pattern of Urbanization of the Study Area: 2001**

- 4.1 Introduction
- 4.2 Spatial Pattern of Urbanization of the Study Area: 2001
  - 4.2.1 Spatial Pattern of Urban Population of the Study Area: 2001
  - 4.2.2 Spatial Pattern of Sanitary Latrine Facilities of the Study Area: 2001
  - 4.2.3 Spatial Pattern of Electricity Connection of the Study Area: 2001
  - 4.2.4 Spatial Pattern of the Sources of Drinking Water (Tube-well) of the Study Area: 2001
  - 4.2.5 Spatial Pattern of Agricultural Contribution to the GDP of the Study Area: 2001
  - 4.2.6 Spatial Pattern of Literacy Rate of the Study Area: 2001.
  - 4.2.7 Spatial Pattern of Urban Literacy Rate of the Study Area: 2001
  - 4.2.8 Spatial Pattern of Primary School of this Study Area: 2001
  - 4.2.9 Spatial Pattern of Secondary School of the Study Area: 2001
  - 4.2.10 Spatial Pattern of Colleges of the Study Area: 2001
  - 4.2.11 Spatial Pattern of Bank Deposit of the Study Area: 2001
  - 4.2.12 Spatial Pattern of Registered Rickshaws of the Study Area: 2001
  - 4.2.13 Spatial Pattern of Metal Road of the Study Area: 2001
  - 4.2.14 Spatial Pattern of Semi-Metal Road of the Study Area: 2001
  - 4.2.15 Spatial Pattern of Kutcha Road of the Study Area: 2001
  - 4.2.16 Spatial Pattern of Municipalities of the Study Area: 2001
- 4.3 Conclusion

## Chapter Four

### Spatial Pattern of Urbanization of the study Area: 2001

#### 4.1 Introduction

Bangladesh is the 8th country of the world in respect of population in size. According to the Bangladesh census report 2001. 23.39% (BBS, 2001) peoples lives in the urban area, where as 19.68% was in 1991 and the annual urban population growth rate was 3.80% between 1991 to 2001. Despite of high rate of urban population growth, the level of urbanization is very low. To show spatial pattern of urbanization of the study area in 2001, the variables which are related with the urbanization discussed in this chapter.

From the reviewing of urbanization patter of the study area, it is found that factors which are related with urbanization has been changed from time to time. The spatial pattern of variables of the study area are depicted below:

#### 4.2 Spatial Pattern of Urbanization of the Study Area: 2001

Spatial features of the urbanization of the study area in 2001 on the basis of selected variables are highlighted below:

##### 4.2.1 Spatial Pattern of Urban population the Study Area: 2001.

Urban population are the prime indicator to measure urbanization. The rate of urban population in 2001 in percentage of the study are shown in the following Table- 4.2.1 and Map- 4.1.

Table-4.2.1: Spatial Pattern of Urban Population of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.99070	--- (Country total 1)	-----
2.	<b>High</b>	2.80786-3.99070	-----	-----
3.	<b>Medium</b>	1.62501-2.80785	--- (Country total 4)	-----
4.	<b>Low</b>	0.44216-1.62500	<b>1</b> (Country total 5)	Rajshahi.
5.	<b>Very Low</b>	-0.74069-0.44215	<b>15</b> (Country total 54)	Nawabganj, Pabna, Rangpur, Kurigram, Natore, Dinajpur, Bogra, Lalmonirhat, Nilphamari, Sirajganj, Panchagarh, Joypurhat, Gaibandha, Naogaon, Thakurgaon.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.1 and Map-4.1. observed that only 1-district like Rajshahi is in the low (4th) stage out of country total 5-districts and 15-districts like Nawabganj, Pabna, Rangpur, Kurigram, Natore, Dinajpur, Bogra, Lalmonirhat, Nilphamari, Sirajganj, Panchagarh, Joypurhat, Gaibandha,.Naogaon, Thakurgaon of the study area in the very low (last) stage out of country total 52-districts in respect of urban population rate. The overall situation of the study area is very low (poor), in respect of the rate of living of urban population.

#### 4.2.2 Spatial Pattern of Sanitary Latrine of the Study Area: 2001

Sanitary Latrine using pattern indicates the standard of living on an area. District-wise sanitary latrine use pattern of the study area in 2001 based on Z-score has shown in the following Table- 4.2.2 and Map- 4.2.

Table-4.2.2: Spatial Pattern of Sanitary Latrines of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.87666	--- (Country total 10)	-----
2.	<b>High</b>	0.08897-0.87666	-----	-----
3.	<b>Medium</b>	-0.69875-0.08896	2 (Country total 24)	Bogra, Panchagarh.
4.	<b>Low</b>	-1.48645- -0.69874	14 (Country total 28)	Nilphamari, Thakurgaon, Rajshahi, Natore, Rangpur, Dinajpur, Pabna, Sirajganj, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Nawabganj.
5.	<b>Very Low</b>	-2.27414- -1.48644	--- (Country total 2)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

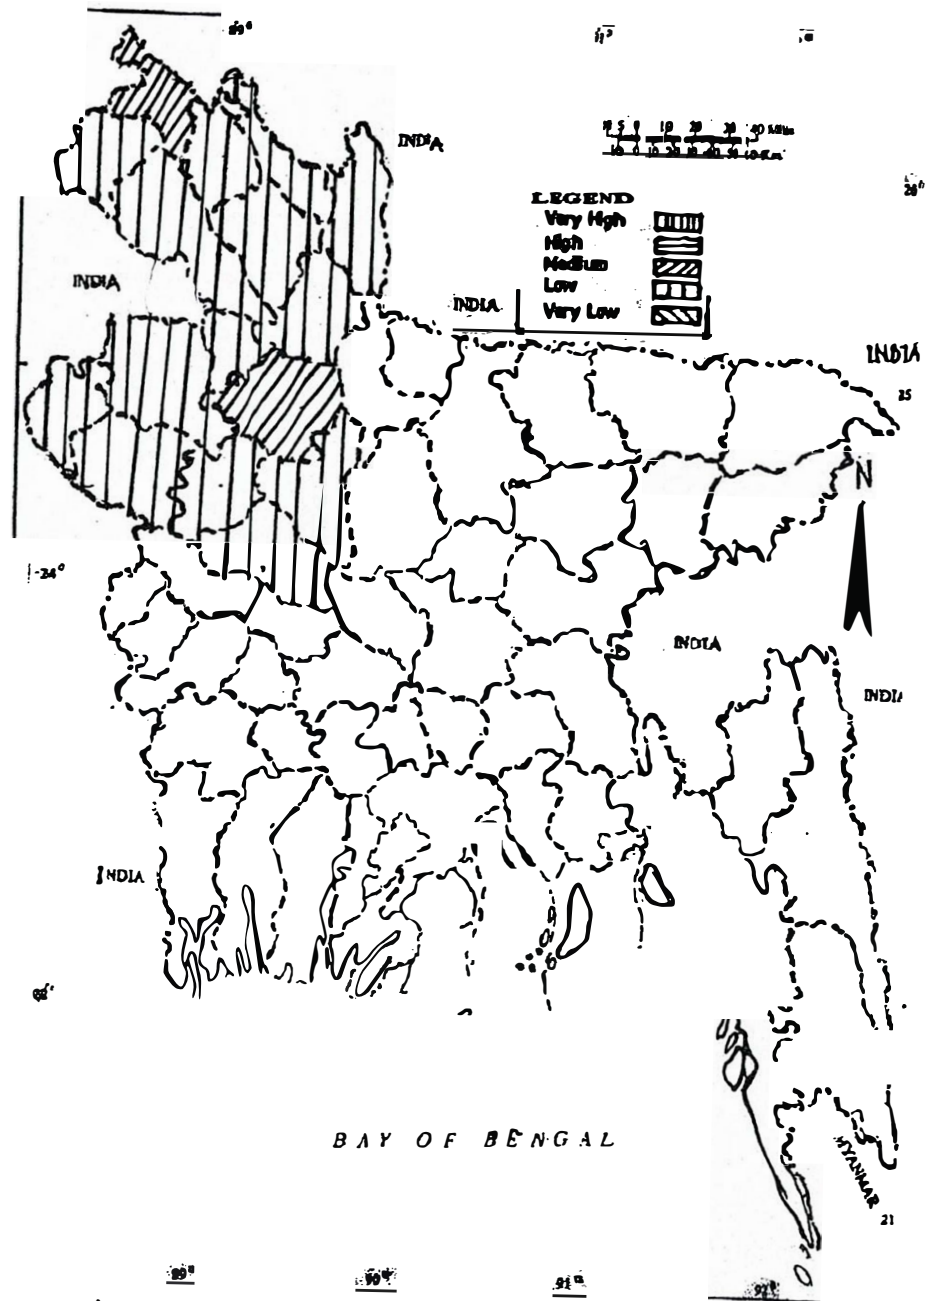

From the Table-4.2.2 and Map-4.2 found that only 2-districts like Bogra & Panchagarh of the study area out of country total 24-districts are in the medium (3rd) stage in respect of sanitary latrine use and the rest 14-districts like Nilphamari, Thakurgaon, Rajshahi, Natore, Rangpur, Dinajpur, Pabna, Sirajganj, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Nawabganj of the study area out of country total 28-districts are in the low (4th) stage.

4.1: Spatial Pattern of Urban Population of the Study Area: 2001

Source: Table - 4.2.1.

4.2: Spatial Pattern of Sanitary Latrines of the Study Area: 2001

Source: Table - 4.2.2.

### 4.2.3 Spatial Pattern of Electricity Connection Facilities of the Study Area: 2001

Electricity is the key driver of the modern life. Electricity connection is most important for the developed or urban areas. Household having electricity connection of the study area in 2001 are shown below based on z-score in the Table - 4.2.3 and Map-4.3.

Table-4.2.3: Spatial Pattern of Electricity Connection of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.15015	--- (Country total 2)	-----
2.	<b>High</b>	2.98925-4.15015	-----	-----
3.	<b>Medium</b>	1.82834-2.98924	--- (Country total 1)	-----
4.	<b>Low</b>	0.66743-1.82833	--- (Country total 1)	-----
5.	<b>Very Low</b>	-0.49349-0.66743	<b>16</b> (Country total 60)	Rajshahi, Bogra, Dinajpur, Pabna, Sirajganj, Nawabganj, Thakurgaon, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the above Table-4.2.3 and Map-4.3 found that the entire 16-districts like Rajshahi, Bogra, Dinajpur, Pabna, Sirajganj, Nawabganj, Thakurgaon, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat of the study area are in the very low (last) stage in respect of electricity connection facilities out of country total 60-districts and the overall status of the study area in electricity connection bears very poor level.

### 4.2.4 Spatial Pattern of Sources of Drinking Water (Tube-well) the Study Area: 2001

The use of Tube-well as a source of drinking water is good for health. Due to the availability of ground water based on level of the use of tube-well as a main source of drinking water is very high in Bangladesh but Taps are largely used in the urban area than tube-well. The following Table-4.24 and Map- 4.4 shows the pattern of tube-well use in the study area in 2001.

Table-4.2.4: Spatial Pattern of Source of Drinking Water (Tube-Well) of the Study Area to the context of the Country based on Z-Score: 2001

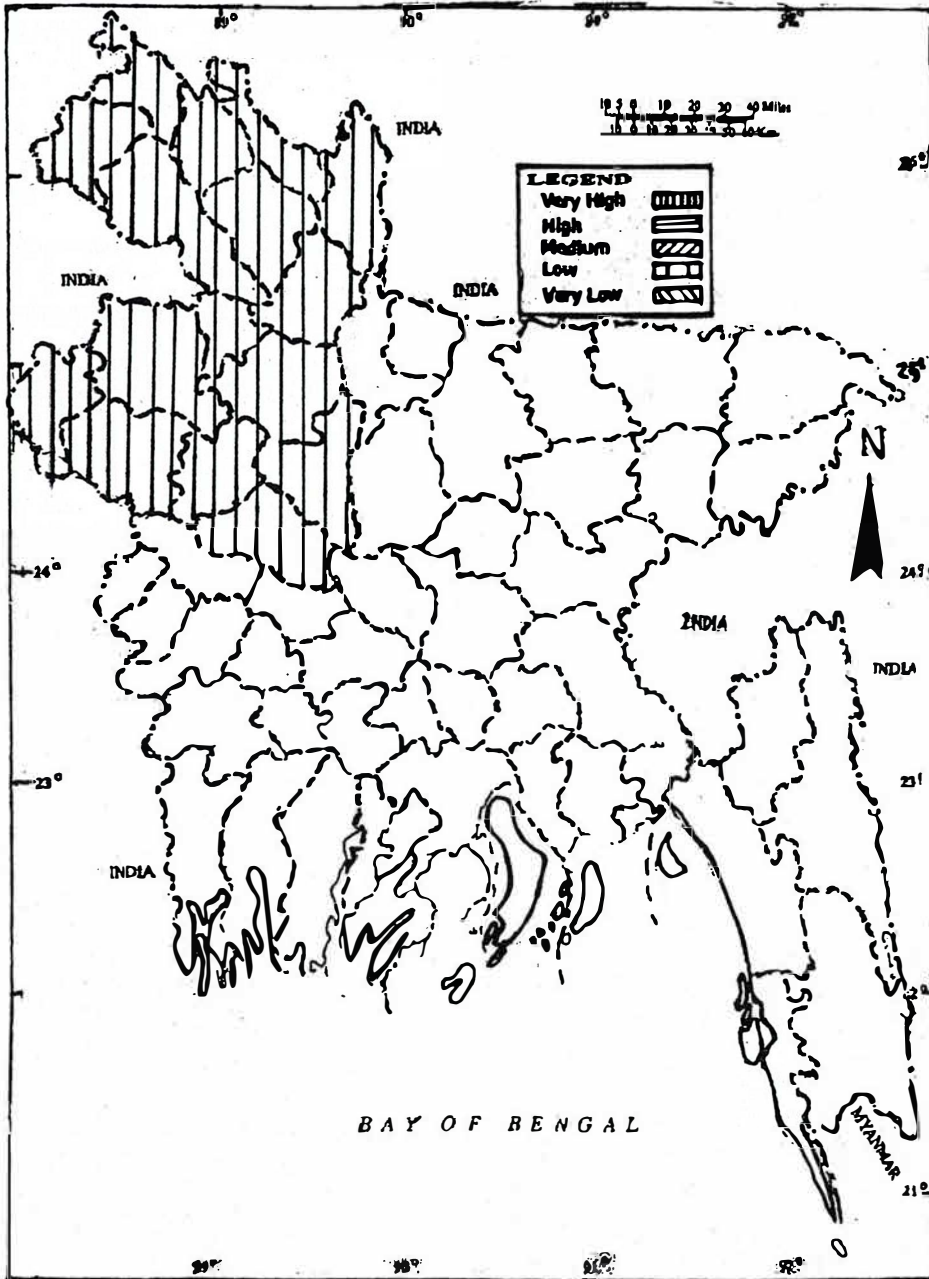

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.28932	<b>15</b> (Country total 34)	Pabna, Bogra, Dinajpur, Sirajganj, Nawabganj, Thakurgaon, Rajshahi, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Kurigram, Lalmonirhat, Gaibandha.
2.	<b>High</b>	-0.41756-0.28932	<b>1</b> (Country total 14)	Naogaon.
3.	<b>Medium</b>	-1.12443- -0.41755	--- (Country total 6)	-----
4.	<b>Low</b>	-1.83131- -1.14420	--- (Country total 2)	-----
5.	<b>Very Low</b>	-2.53818- -1.83130	--- (Country total 8)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.4 and Map-4.4 reveals that the use of tube-well as a source of drinking water in 2001 found among the 15-districts like Pabna, Bogra, Dinajpur, Sirajganj, Nawabganj, Thakurgaon, Rajshahi, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Kurigram, Lalmonirhat, Gaibandha of the study area out of country total 34-districts, i.e. the study area is in the very high stage (1st stage) in respect of tube-well use as a source of drinking water.

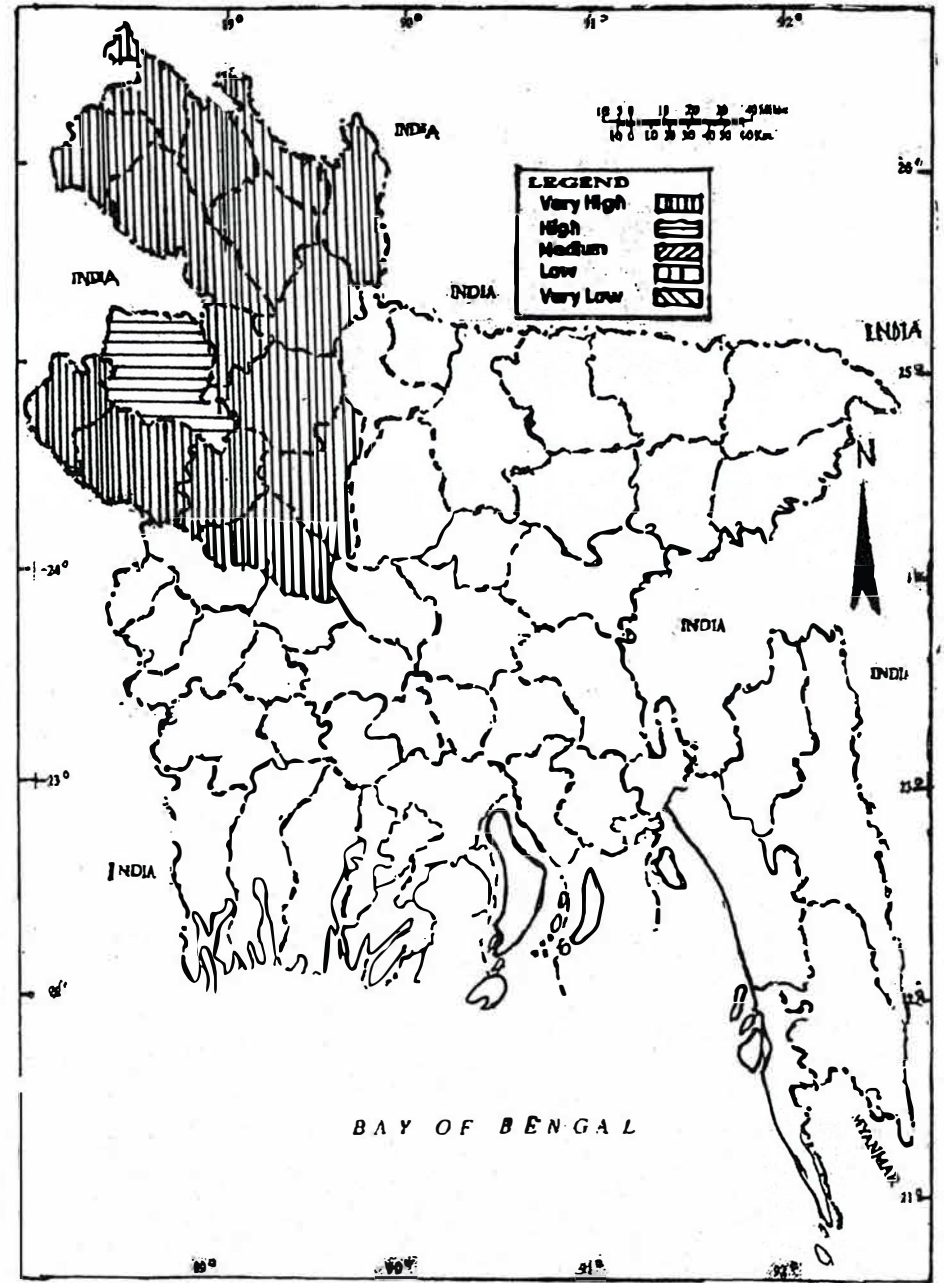

4.3: Spatial Pattern of Electricity Connection of the Study Area: 2001

49

Source: Table - 4.2.3 .

4.4: Spatial Pattern of Source of Drinking Water (Tube-Well) of the Study Area: 2001

Source: Table - 4.2.4 .

#### 4.2.5 Spatial Pattern of Agricultural Contribution to the GDP of the Study Area: 2001

Bangladesh is an agro-based country and agro-based districts area are contributing much in the GDP as well as in the overall economy of Bangladesh. In the following Table- 4.2.5 and Map- 4.5, the district-wise contribution pattern of agri-sector in the GDP of Bangladesh are shown.

Table-4.2.5: Spatial Pattern of Agricultural Contribution to the GDP of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.38153	--- (Country total 1)	
2.	<b>High</b>	2.20633-3.38153	--- (Country total 1)	
3.	<b>Medium</b>	1.03112-2.20632	3 (Country total 5)	Naogaon, Bogra, Dinajpur.
4.	<b>Low</b>	-0.14409-1.03111	7 (Country total 25)	Rangpur, Gaibandha, Kurigram, Pabna, Rajshahi, Natore, Sirajganj.
5.	<b>Very Low</b>	-1.31930- -0.14408	6 (Country total 32)	Nilphamari, Thakurgaon, Joypurhat, Lalmonirhat, Nawabganj, Panchagarh.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.5 and Map-4.5 found that only 03-districts like Naogaon, Bogra, Dinajpur of the Study area are in the medium (3rd), stage, 7-districts like Rangpur, Gaibandha, Kurigram, Pabna, Rajshahi, Natore, Sirajganj are in the low (4th) stage and the rest 6-districts like Nilphamari, Thakurgaon, Joypurhat, Lalmonirhat, Nawabganj, Panchagarh are in the very low (last) stage out of country total 5-districts, 25-districts and 32-districts respectively. So, the overall contribution of the agri-sector to the GDP of the study area to the nation is in the low stage.

#### 4.2.6 Spatial Pattern of Literacy Rate of the Study Area: 2001

Education is the basic need of people and it is said that education is the backbone of a nation. An idea can be generate easily on the basis of rate literacy rate. Generally, very literate areas are have been found developed and urbanized. So education can be identified as the main indicator of urbanization, Inter-district Pattern of literacy rate of the-study area for the census year 2001 of Bangladesh shown in the Table-4.2.6 and Map-4.6

Table-4.2.6: Spatial Pattern of Literacy Rate of the Study Area to the context of the Country based on Z-Score: 2001

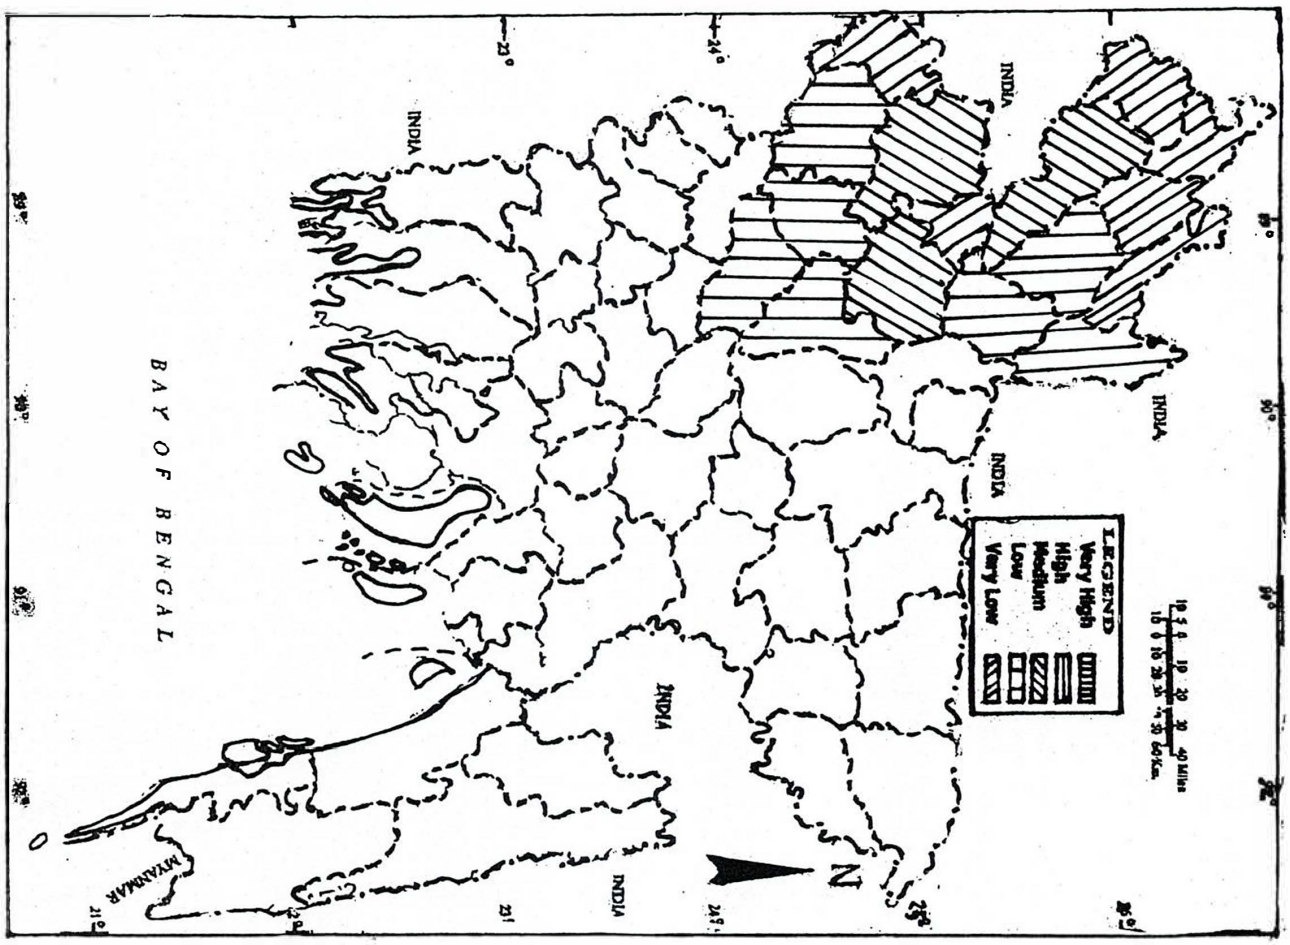

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.59718	--- (Country total 4)	
2.	<b>High</b>	0.73077-1.59718	--- (Country total 11)	
3.	<b>Medium</b>	-0.13567-0.73076	5 (Country total 14)	Joypurhat, Rajshahi, Dinajpur, Naogaon, Panchagarh.
4.	<b>Low</b>	-1.00209—0.13566	8 (Country total 27)	Thakurgaon, Bogra, Pabna, Lalmonirhat, Natore, Rangpur, Sirajganj, Nilphamari.
5.	<b>Very Low</b>	-1.8685- -1.00208	3 (Country total 8)	Nawabganj, Gaibandha, Kurigram.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.6 and Map-4.6 found that only 05-districts of the study area like Joypurhat, Rajshahi, Dinajpur, Naogaon, Panchagarh are in the medium (3rd) stage, 08-districts like Thakurgaon, Bogra, Pabna, Lalmonirhat, Natore, Rangpur, Sirajganj, Nilphamari are in the medium (4th) stage, and the rest 03-districts like Nawabganj, Gaibandha, Kurigram are in the very low (last) stage in respect of literacy rate out of country total 14-districts, 27-districts and 8-districts respectively.

4.5: Spatial Pattern of Agricultural Contribution to the GDP of the Study Area: 2001

Source: Table-4.2.5.

4.6: Spatial Pattern of Literacy Rate of the Study Area: 2001

Source: Table-4.2.6.

#### 4.2.7 Spatial Pattern of Urban Literacy Rate of the Study Area: 2001

Due to available facilities for the education in the urban area than rural area, the urban literacy rate becomes higher than rural area and the student migrates to the urban area from the rural area. The inter-district pattern of urban literacy rate shown in the Table- 4.2.7 & Map- 4.7.

Table-4.2.7: Spatial Pattern of Urban Literacy Rate of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.03069	<b>1</b> (Country total 10)	Bogra.
2.	<b>High</b>	0.20598-1.03069	<b>3</b> (Country total 18)	Gaibandha, Pabna, Thakurgaon.
3.	<b>Medium</b>	-0.61875-0.20599	<b>4</b> (Country total 18)	Rangpur, Dinajpur, Natore, Panchagarh.
4.	<b>Low</b>	-1.44347—0.61874	<b>5</b> (Country total 13)	Joypurhat, Rajshahi, Naogaon, Sirajganj, Lalmonirhat.
5.	<b>Very Low</b>	-2.26819- -1.44346	<b>3</b> (Country total 5)	Nilphamari, Nawabganj, Kurigram.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.7 and Map-4.7 found that only 01-district of the study are like Bogra is in the very high (1st stage) stage, 03-districts like Gaibandha, Pabna, Thakurgaon are in the high (2nd) stage, 4-districts like Rangpur, Dinajpur, Natore, Panchagarh are in the medium (3rd) stage, 05-districts like Joypurhat, Rajshahi, Naogaon, Sirajganj, Lalmonirhat are in the low (4th) stage and the rest 03-districts like Nilphamari, Nawabganj, Kurigram are in the very low (last) stage out of country total 10-districts, 18-districts, 13-districts, 05-districts respectively. So, the condition is medium.

#### 4.2.8 Spatial Pattern of Primary Schools of the Study Area: 2001

The primary school is the first stage or level of education of Bangladesh. Primary education is mandatory for all. District-wise pattern of Primary school of the study area for the census year 2001 to the context of the country shown in the following Table- 4.2.8 and Map-4.8.

Table-4.2.8: Spatial Pattern of Primary Schools of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.33156	--- (Country total 2)	-----
2.	<b>High</b>	1.12430-2.33156	--- (Country total 5)	-----
3.	<b>Medium</b>	0.0830-1.12429	<b>10</b> (Country total 23)	Panchagarh, Thakurgaon, Pabna, Kurigram, Gaibandha, Dinajpur, Rangpur, Naogaon, Nilphamari, Lalmonirhat.
4.	<b>Low</b>	-1.29025—0.0829	<b>6</b> (Country total 31)	Sirajganj, Bogra, Nawabganj, Rajshahi, Natore, Joypurhat.
5.	<b>Very Low</b>	-2.49751- -1.29024	--- (Country total 3)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

Forth the Table-4.2.8 and Map-4.8 focused that 10-districts like Panchagarh, Thakurgaon, Pabna, Kurigram, Gaibandha, Dinajpur, Rangpur, Naogaon, Nilphamari, Lalmonirhat of the study area are in the medium (3<sup>rd</sup>) stage 6 districts like Sirajganj, Bogra, Nawabganj, Rajshahi, Natore, Joypurhat are in the low (4<sup>th</sup>) stage our of the country total 23-Districts and 31- Districts respectively.

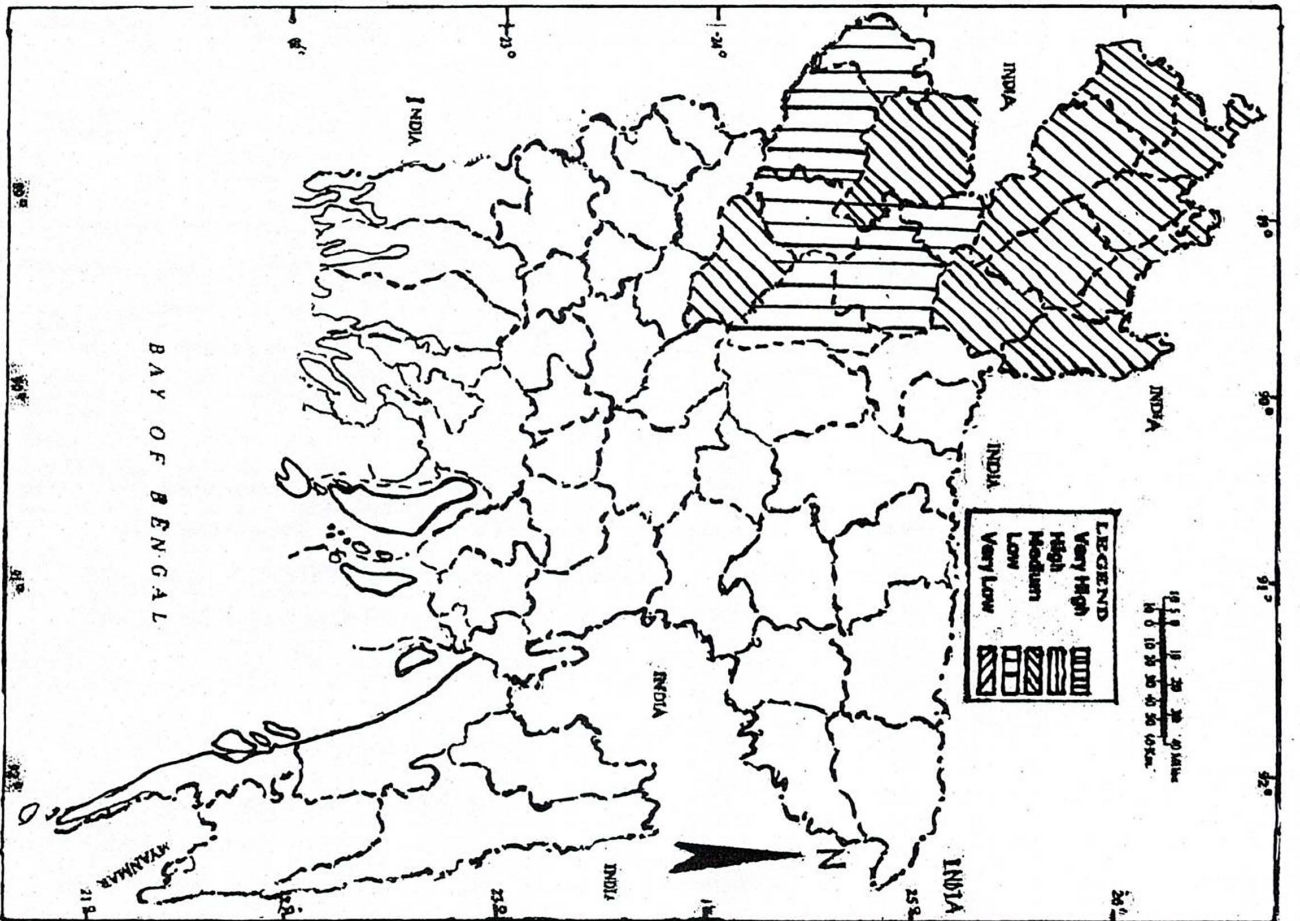

4.7: Spatial Pattern of Urban Literacy Rate of the Study Area: 2001

Source: Table - 4.2.7.

4.8: Spatial Pattern of Primary Schools of the Study Area: 2001

Source: Table-4.2.8.

#### 4.2.9 Spatial Pattern of Secondary Schools of the Study Area: 2001

The 2<sup>nd</sup> stage of education is the Secondary level education and the District-wise pattern of Secondary Schools of the study area show in the following Table-4.29 and Map- 4.2.

Table-4.2.9: Spatial Pattern of Secondary Schools of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.57674	1 (Country total 2)	Panchagarh.
2.	<b>High</b>	1.42216-2.57674	2 (Country total 2)	Thakurgaon, Rajshahi.
3.	<b>Medium</b>	0.26756-1.42215	6 (Country total 19)	Dinajpur, Natore, Gaibandha, Naogaon, Nawabganj, Nilshamari.
4.	<b>Low</b>	-0.88704-0.26755	7 (Country total 28)	Rangpur, Bogra, Pabna, Joypurhat, Kurigram, Lalmonirhat, Sirajganj.
5.	<b>Very Low</b>	-2.04162- -0.88703	--- (Country total 3)	
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.9 and Map-4.9 found that only 1-district like Panchagarh of the study area is in the first Category (very high), 2-districts like Thakurgaon, Rajshahi are in the 2<sup>nd</sup> Category (medium), 7-districts like Rangpur, Bogra, Pabna, Joypurhat, Kurigram, Lalmonirhat, Sirajganj are in the 4<sup>th</sup> Category (low) in respect of number of Secondary schools out of country total 2-districts, 2-districts, 19-districts & 28-districts respectively.

#### 4.2.10 Spatial Pattern of Colleges of the Study Area: 2001

College is the 3<sup>rd</sup> level of education in Bangladesh. District-wise numbers of colleges in percentage of the study based on z-score for the census year 2001 shown in the following Table-4.2.10 and Map-4.10.

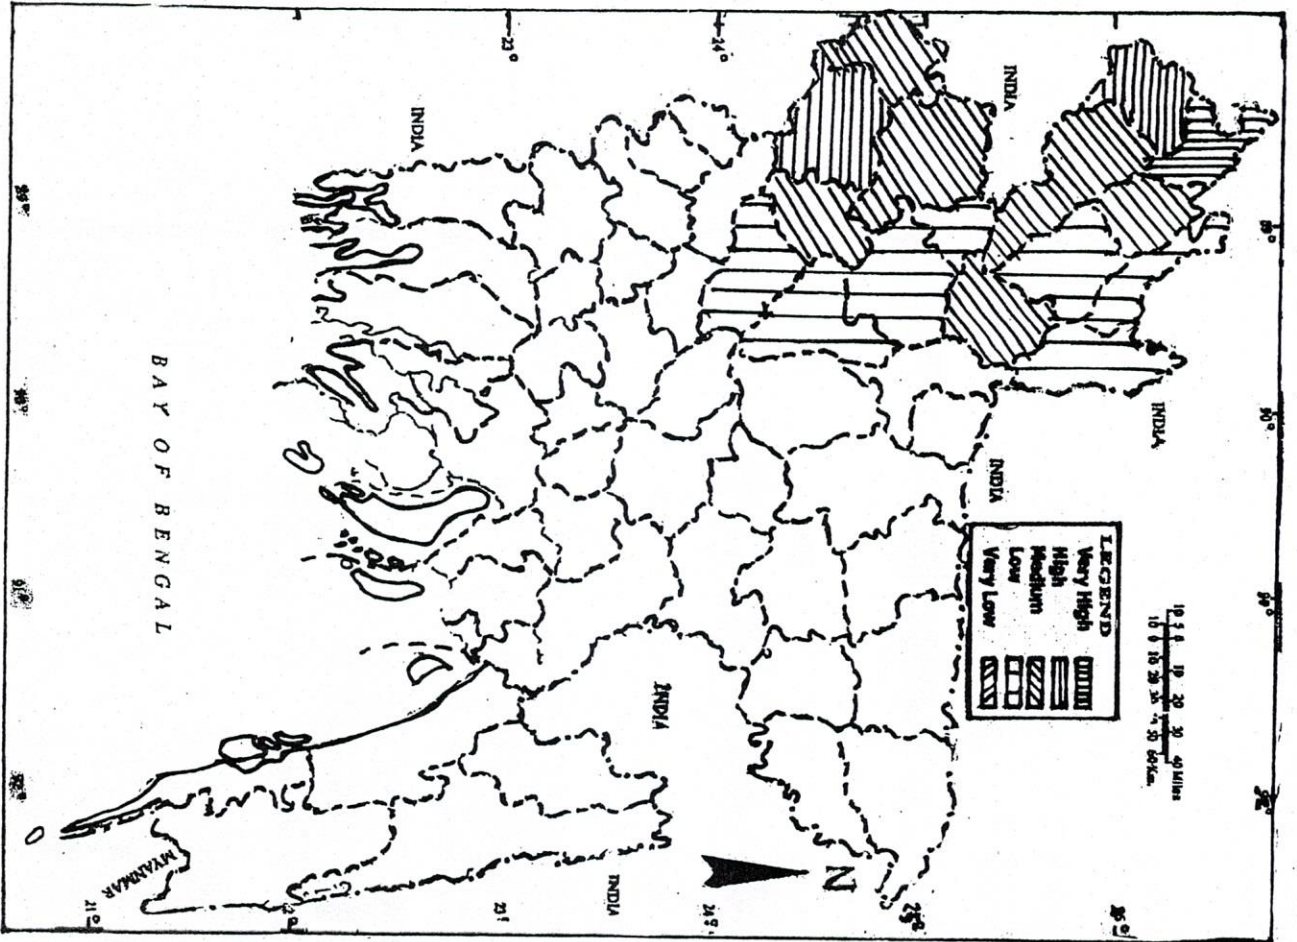

Table-4.2.10: Spatial Pattern of Colleges of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 4.57378	--- (Country total 1)	
2.	<b>High</b>	3.07392-4.57378		
3.	<b>Medium</b>	1.57409-3.07392	1 (Country total 1)	Rajshahi.
4.	<b>Low</b>	0.07426-1.57408	9 (Country total 20)	Dinajpur, Nawabganj, Sirajganj, Panchagarh, Rangpur, Thakurgaon, Gaibandha, Joypurhat, Naogaon.
5.	<b>Very Low</b>	-1.4258-0.07425	6 (Country total 42)	Lalmonirhat, Kurigram, Bogra, Pabna, Nilshamari, Natore.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

Source: Table-4.2.9.

4.10: Spatial Pattern of Colleges of the Study Area: 2001

Source: Table-4.2.10.

From the Table-4.2.10 and Map-4.10 found that only 1-district like Rajshahi is in the medium level (3<sup>rd</sup> category), 9-districts like Dinajpur, Nawabganj, Sirajganj, Panchagarh, Rangpur, Thakurgaon, Gaibandha, Joypurhat, Naogaon are in the low level (4<sup>th</sup> category), 6-districts like Lalmonirhat, Kurigram, Bogra, Pabna, Nilphamari, Natore are in the very low level (5<sup>th</sup> category) of the study area in respect of number of college based on Z-score out of country total 1- district, 20- districts, 42-districts and 6-districts respectively.

#### 4.2.11 Spatial Pattern of Metal Road of the Study Area: 2001

Metal Road indicates the developed system of communication. The length of Metal Road in Bangladesh is not in satisfactory level. Generally, the metal Roads are found in the city or urban area of Bangladesh. Districts-wise statistics of Metal Road in length of the study area shown in the following Table- 4.2.11 and Map- 4.11.

Table-4.2.11: Spatial Pattern of Metal Road of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.30067	---(Country total 2)	
2.	<b>High</b>	1.46354-2.30067	1 (Country total 5)	Rajshahi.
3.	<b>Medium</b>	0.62641-1.46353	3 (Country total 8)	Pabna, Dinajpur, Rangpur.
4.	<b>Low</b>	-0.21074-0.62640	3 (Country total 12)	Nilphamari, Naogaon, Gaibandha.
5.	<b>Very Low</b>	-1.04787- -0.21073	9 (Country total 37)	Bogra, Sirajganj, Joypurhat, Panchagarh, Kurigram, Lalmonirhat, Natore, Nawabganj, Thakurgaon.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.11 and Map-4.11 found that only 1-district like Rajshahi is in the 2nd Category (high level), 3-districts like Nilphamari, Naogaon, Gaibandha are in the 4th category (low level) and 9-districts like Bogra, Sirajganj, Joypurhat, Panchagarh, Kurigram, Lalmonirhat, Natore, Nawabganj, Thakurgaon are in the 5th category (very low level) in respect of length of Metal Road out of country total 5-districts, 8-districts, 12-districts and 37-districts respectively.

#### 4.2.12 Spatial Pattern of Semi-Metal Road of the Study Area: 2001

Semi-Metal Road is very important for the communication system of Bangladesh. Semi-Metal Roads are found in rural area in line with urban area. District-wise statistics of Semi-Metal road of study area shown in the following Table-- 4.2.12 and Map- 4.12.

Table-4.2.12: Spatial Pattern of Semi-Metal Road of the Study Area to the context of the Country based on Z-Score: 2001

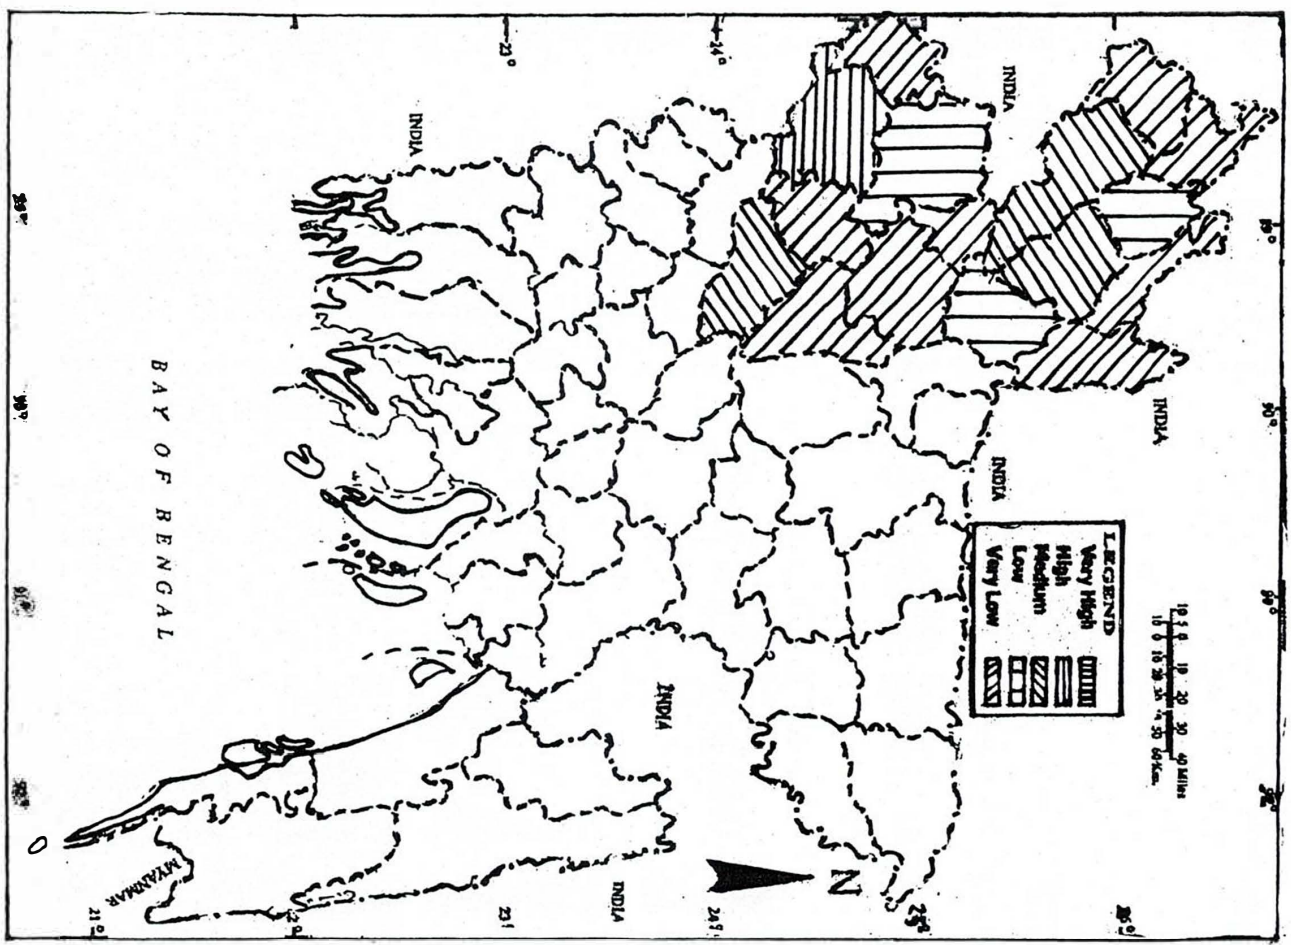

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.85835	---(Country total 2)	-----
2.	<b>High</b>	1.89410-2.85835	<b>1</b> (Country total 1)	Rajshahi.
3.	<b>Medium</b>	0.92983-1.89409	---(Country total 6)	-----
4.	<b>Low</b>	-0.03444-0.92982	<b>3</b> (Country total 21)	Bogra, Nawabganj, Dinajpur.
5.	<b>Very Low</b>	-0.99870- -0.03443	<b>12</b> (Country total 34)	Rangpur, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Rajshahi, Natore, Nilphamari, Pabna, Sirajganj, Panchagarh.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.12 and Map-4.12 found that only 1-district like Rajshahi of the study area is in the high level (2nd category), 3-districts like Bogra, Nawabganj, Dinajpur are in the low level (4th category) and 12-districts like Rangpur, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Rajshahi, Natore, Nilphamari, Pabna, Sirajganj, Panchagarh are in the very low level (5th or last category) out of country total 1-district, 21-district & 34-district respectively.

4.11: Spatial Pattern of Metal Road of the Study Area: 2001

Source: Table-4.2.11.

4.12: Spatial Pattern of Semi-Metal Road of the Study Area: 2001

Source: Table-4.2.12.

#### 4.2.13 Spatial Pattern of Kutcha Road of the Study Area: 2001

Kutcha Road are generally found in the rural areas. Generally, there is no alternative of Kutcha Road in the rural area. District-wise statistics of the study area based on Z-score value shown in the Table-4.2.134 and Map-4.13.

Table-4.2.13: Spatial Pattern of Kutcha Road of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.94597	--- (Country total 3)	-----
2.	<b>High</b>	1.07261-1.94597	2 (Country total 5)	Rajshahi, Kurigram.
3.	<b>Medium</b>	0.19925-1.07260	7 (Country total 19)	Bogra, Rangpur, Gaibandha, Naogaon, Dinajpur, Nilphamari, Pabna.
4.	<b>Low</b>	-0.67413-1.09924	7 (Country total 22)	Panchagarh, Sirajganj, Thakurgaon, Nilphamari, Nawabganj, Joypurhat, Naogaon, Lalmonirhat, Natore.
5.	<b>Very Low</b>	-1.54749- -0.67412	--- (Country total 15)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-4.

From the Table- 4.2.13 and Map-4.13 focused that only 2-districts like Rajshahi, Kurigram are in the high category (2nd level), 7-districts like Bogra, Rangpur, Gaibandha, Naogaon, Dinajpur, Nilphamari, Pabna are in the medium category (3rd level), 7-districts like Panchagarh, Sirajganj, Thakurgaon, Nilphamari, Nawabganj, Joypurhat, Naogaon, Lalmonirhat, Natore are in the low category (4th level) of the study area in respect of Kutcha Road out of the country total 5-districts, 19-districts & 22 districts respectively.

#### 4.2.14 Spatial Pattern of Bank Deposit of the Study Area: 2001

Banks are one of the service oriented financial institution of Bangladesh. Bank deposition indicates the economic status & development of a particular area or a region. District-wise statistics of Bank deposits of the study area for the census year-2001 is shown in the following Table-4.2.14 and Map- 4.14.

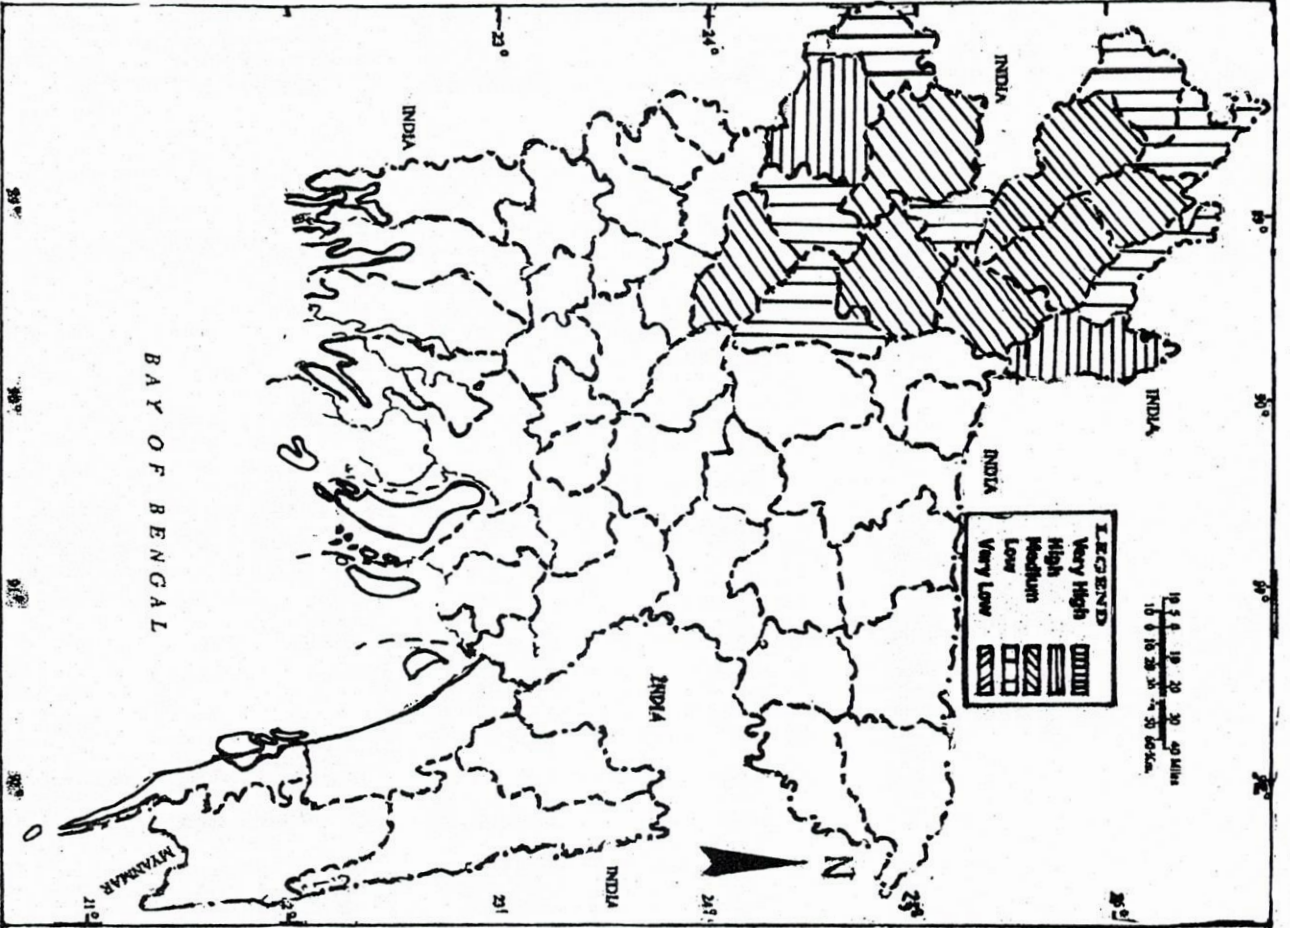

Table-4.2.14: Spatial Pattern of Bank Deposit of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 5.99270	---	(Country total 1)
2.	<b>High</b>	4.43399-5.99270	---	(Country total 1)
3.	<b>Medium</b>	2.87528-4.43398	---	(Country total 1)
4.	<b>Low</b>	1.31656-2.87527	---	(Country total 1)
5.	<b>Very Low</b>	-0.24216-1.31655	<b>16</b>	(Country total 62) Rajshahi, Bogra, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Dinajpur, Pabna, Sirajganj, Nawabganj, Thakurgaon, Natore, Rangpur, Nilphamari, Panchagarh.
<b>Total</b>			<b>16</b>	(Country total 64)

Source: Based on Appendix-4.

From the Table-4.2.14 and Map-4.14 found that all districts of North-western regions of Bangladesh are in the very low category (5th level) out of country total 62-districts in respect of Bank deposits and it also indicates that the economic condition of this region (north-western) is not satisfactory.

4.13: Spatial Pattern of Kuricha Road of the Study Area: 2001

Source: Table-4.2.13.

4.14: Spatial Pattern of Bank Deposit of the Study Area: 2001

Source: Table-4.2.14.

#### 4.2.15 Spatial Pattern of Registered Rickshaws of the Study Area: 2001

Rickshaws are the main transportation media or system of Bangladesh. But the rickshaws are mostly shown in the urban area. District-wise statistics of Registered Rickshaws of the study area are shown in the following Table- 2.15 and Map- 4.15.

Table-4.2.15: Spatial Pattern of Registered Rickshaws of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area	
1.	<b>Very High</b>	+ 5.59625	---	(Country total 1)	
2.	<b>High</b>	4.08957-5.59625			
3.	<b>Medium</b>	2.58288-4.08956	---	(Country total 1)	
4.	<b>Low</b>	1.07619-2.58287			
5.	<b>Very Low</b>	-0.43351-1.07618	<b>16</b>	(Country total 62)	Rajshahi, Bogra, Joypurhat, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Dinajpur, Pabna, Sirajganj, Nawabganj, Thakurgaon, Natore, Rangpur, Nilphamari, Panchagarh.
		<b>Total</b>	<b>16</b>	(Country total 64)	

Source: Based on Appendix-4.

From the Table-4.2.15 and Map-4.15 found that all districts of the study area are in the very low category (last level) out of country total 62-districts in respect of Rickshaws Registration and it also indicates that the Rickshaw puller of this region (North-western Region of Bangladesh) are not respecting the law and order of the country properly.

#### 4.2.16 Spatial Pattern of Municipalities of the Study Area: 2001

As a part of urbanization, the important places of Bangladesh are transformed into the Municipality. District-wise pattern of Municipalities in number of the study area are shown in the Table- 4.2.16 and Map- 4.16

Table-4.2.16: Spatial Pattern of Municipalities of the Study Area to the context of the Country based on Z-Score: 2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area	
1.	<b>Very High</b>	+ 1.73123	<b>2</b>	(Country total 5)	Pabna, Rajshahi.
2.	<b>High</b>	0.94939-1.73123	<b>1</b>	(Country total 3)	Dinajpur.
3.	<b>Medium</b>	0.16754-0.94938	<b>1</b>	(Country total 7)	Bogra.
4.	<b>Low</b>	-0.61432-0.16753	<b>2</b>	(Country total 14)	Sirajganj, Natore.
5.	<b>Very Low</b>	-1.39616-0.94937	<b>10</b>	(Country total 35)	Joypurhat, Nawabganj, Rangpur, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Nilphamari, Panchagarh.
		<b>Total</b>	<b>16</b>	(Country total 64)	

Source: Based on Appendix-4.

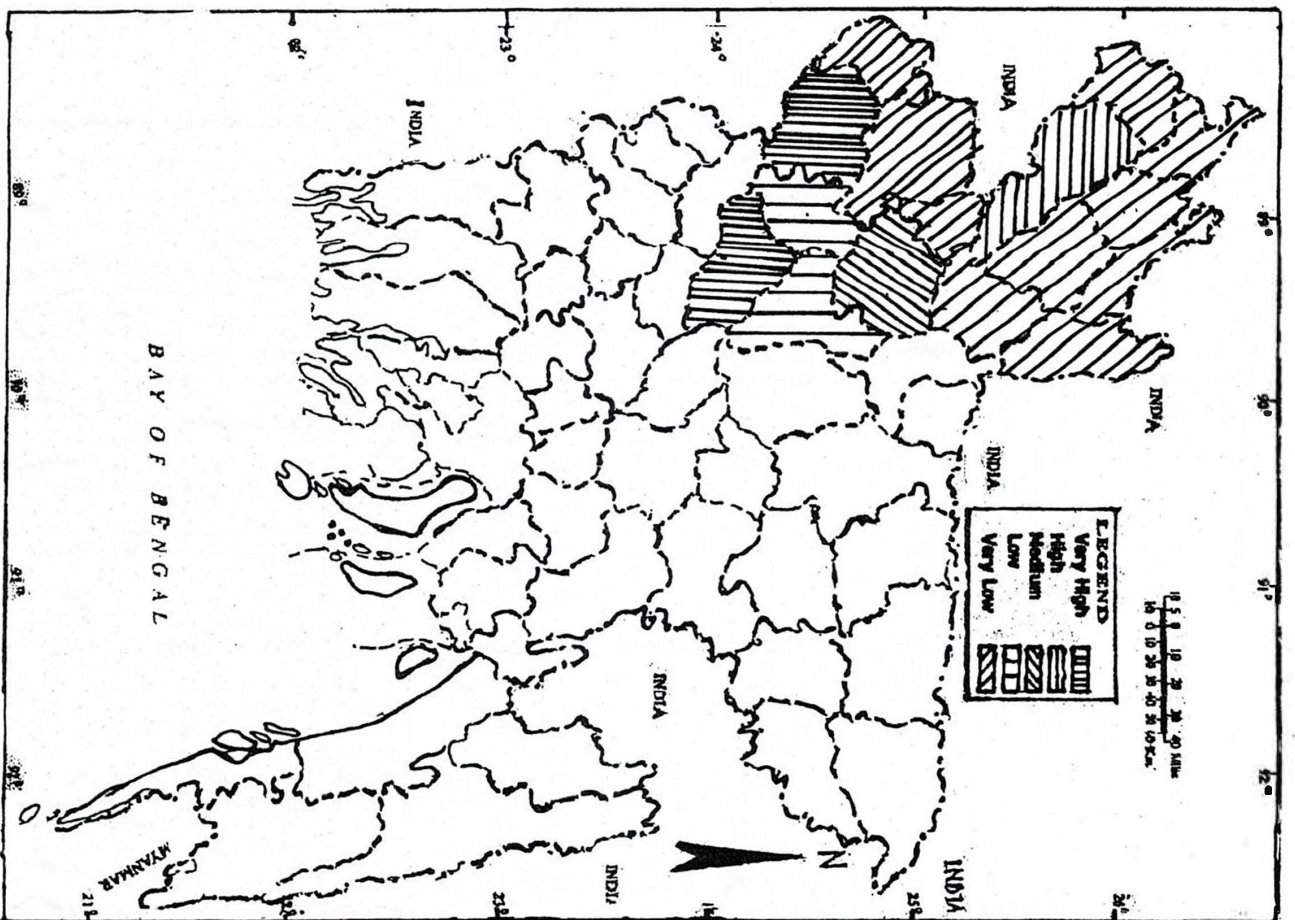

4.15: Spatial Pattern of Registered Rickshaws of the Study Area: 2001

Source: Table - 4.2.15

4.16: Spatial Pattern of Municipalities of the Study Area: 2001

Source: Table - 4.2.16

From the Table- 4.2.16 and Map- 4.16 observed only 2-districts like Pabna, Rajshahi are in the very high category (1st level), only 1-district like Dinajpur is in the high category (2nd level), only 1-district like Bogra is in the medium category (3rd level), 2-districts like Sirajgonj, Natore are in the low category (4th level) and 10-district like Joypurhat, Nawabganj, Rangpur, Naogaon, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Nilphamari, Panchagarh are in the very low category (last level) of the study area in respect of number of Municipalities out of country total 5-districts, 3-districts, 7-districts, 14-districts and 10-districts respective. All these indicates that the study area is in the very low stage in respect of having minimum municipalities.

### **4.3 Conclusion**

This chapter contains the spatial pattern of urbanization of the study area to the context of the country (national data) for the census year 1991.

In the next chapter five, spatial changing pattern of urbanization of the study area on the basis of Bangladesh Population Census data for the year 1991 & 2001.

# Chapter Five

## **Spatial Changing Pattern of Urbanization of the Study Area: 1991-2001**

- 5.1 Introduction
- 5.2 Spatial Changing Pattern of Urbanization of the Study Area: 1991-2001
  - 5.2.1 Spatial Change in Levels in Urbanization of the Study Area: 1991-2001
  - 5.2.2 Spatial Change of Urban Population of the Study Area: 1991-2001
  - 5.2.3 Spatial Changing Pattern of Sanitary Latrine Facilities of the Study Area: 1991-2001
  - 5.2.4 Spatial Changing Pattern of Electricity Connection of the Study Area: 1991-2001
  - 5.2.5 Spatial Changing Pattern of Sources of Drinking Water (Tub-well) of the Study Area: 1991-2001
  - 5.2.6 Spatial Changing Pattern of Literacy Rate of the Study Area: 1991-2001
  - 5.2.7 Spatial Changing Pattern of Urban Literacy Rate of the Study Area: 1991-2001
  - 5.2.8 Spatial Changing Pattern of Primary Schools of the Study Area: 1991-2001
  - 5.2.9 Spatial Changing Pattern of Secondary Schools of the Study Area: 1991-2001
  - 5.2.10 Spatial Changing Pattern of Colleges of the Study Area: 1991-2001
  - 5.2.11 Spatial Changing Pattern of Metal Road of the Study Area: 1991-2001
  - 5.2.12 Spatial Changing Pattern of Semi-Metal Road of the Study Area: 1991-2001
  - 5.2.13 Spatial Changing Pattern of Kutcha Road of the Study Area: 1991-2001

  - 5.2.15 Spatial Change of Registered Rickshaws of the Study Area: 1991-2001
  - 5.2.16 Spatial Changing Pattern of Municipalities of the Study Area: 1991-2001
  - 5.2.17 Spatial Changing Pattern of GDP from Agricultural Sector of the Study Area: 1991-2001
  - 5.2.18 Ranking in Spatial Changes in Levels of Urbanization of the Study Area: 1991-2001
- 5.3 Conclusion

## **Chapter Five**

### **Spatial Changing Pattern of Urbanization of the Study Area: 1991-2001**

#### **5.1 Introduction**

The concept of urbanization is vast, not least. Urbanization is a process by which vigorous changes have been made on an area or a region. Basically, urbanization is a process of population centralization. The level of urbanization has been increased since 60th century. From the liberation to 1991, the rate of urbanization was very high than that of any period.

In this study, the pattern & changes of urbanization in North-Western Regions of Bangladesh from 1991 to 2001 have been examined. To examine, analysis and interpretation of the pattern and changes of urbanization in North-Western Regions of Bangladesh, 16-variables have been used. An overall idea of the country may be generated & also possible by meaning the changing rate of urbanization in North-Western Regions of Bangladesh. The ranking has been made on the basis of degrees of the changing of the variables. This ranking indicates the level of urbanization of a district.

To measure the spatial change in levels of urbanization of the study area, variable analysis model 1 & 2 and to measure changing pattern of the related variables, variable analysis mode 3 & 4 are used.

#### **5.2 Spatial Changing Pattern of Urbanization of the Study Area: 1991-2001**

##### **5.2.1 Spatial Change in Levels of Urbanization of the Study Area: 1991-2001**

Urbanization in Bangladesh is a weak geographical process. Though the rate of urbanization of Bangladesh increased in like with the increase of population, but this increasing trend of urbanization is very low compared to the other country of the world, even in the south Asia. From the study, it is observed that the changing rate in levels of urbanization is not satisfactory & not in the desired level. The spatial (Inter-district) change in levels of urbanization of the study area to the context of the country based on the census years data 1991 and 2001 has shown in the following Table- 5.2.1, Map- 5.1 and also in the Appendix-5.

Table-5.2.1: Spatial Change in Levels of Urbanization of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.54	--- (Country total 1)	
2.	<b>High</b>	1.17-1.54	--- (Country total 1)	
3.	<b>Medium</b>	0.81-1.17	--- (Country total 2)	
4.	<b>Low</b>	0.44-0.80	8 (Country total 20)	Bogra, Sirajganj, Dinajpur, Rangpur, Naogaon, Rajshahi, Pabna, Gaibandha.
5.	<b>Very Low</b>	0.06-0.43	8 (Country total 39)	Kurigram, Natore, Nilphamari, Thakurgaon, Lalmonirhat, Nawabganj, Joypurhat, Panchagarh.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-5.

From the Table- 5.2.1 and Map- 5.1, it is observed that the changing levels in urbanization of the study area is in the low category (08-districts like Bogra, Sirajganj, Dinajpur, Rangpur, Naogaon, Rajshahi, Pabna, Gaibandha of the study area out of country total 20-districts) and also in the very low category (08-districts of the study area like Kurigram, Natore, Nilphamari, Thakurgaon, Lalmonirhat, Nawabganj, Joypurhat, Panchagarh out of country total 39-districts) which indicates the poor changing levels in urbanization of the study area, i.e the changing rate in levels of urbanization was very low.

## 5.2.2 Spatial Change of Urban Population of the Study Area: 1991-2001

Urban population is the best way to represent the real picture of urbanization. The urban population of Bangladesh was 19.63% & 23.39% in 1991 & 2001 respectively. The spatial pattern & change of urban population of the study area to the context of the country shown in the following Table- 5.2.2 and Map- 5.2.

Table-5.2.2: Spatial Change of Urban Population of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.39344	--- (Country total 1)	
2.	<b>High</b>	0.29609-0.39344	--- (Country total 1)	
3.	<b>Medium</b>	0.19873-0.29608		
4.	<b>Low</b>	0.10137-0.19872	5 (Country total 13)	Sirajganj, Rajshahi, Rangpur, Dinajpur, Bogra.
5.	<b>Very Low</b>	0.004-0.10136	11 (Country total 49)	Nawabganj, Naogaon, Pabna, Nilphamari, Panchagarh, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Natore, Joypurhat.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.1.

5.1: Spatial Change in Levels of Urbanization of the Study Area: 1991-2001

Source: Table-5.2.1.

5.2: Spatial Change of Urbanization Population of the Study Area: 1991-2001

Source: Table-5.2.2.

From the Table-5.2.2. and Map-5.2 reveals that only 5-districts like Sirajganj, Rajshahi, Rangpur, Dinajpur, Bogra of the study area are in the low level (4<sup>th</sup> Category) in respect of the changing rate of urban population from the census year 1991 to 2001 and the rest 11- districts like Nawabganj, Naogaon, Pabna, Nilphamari, Panchagarh, Gaibandha, Kurigram, Lalmonirhat. Thakurgaon, Natore, Joypurhat of the study area in the very low level (last category) out of country total 13- districts and 49- districts respectively. So, the data reveals that the status of the study area in respect of urban population changing is not I the expected level compared to the country.

### 5.2.3 Spatial Changing Pattern of Sanitary Latrine Facilities of the Study Area: 1991-2001

Sanitary Latrine or Toilet facility is one of the important mediator of living standard. The spatial changing pattern of sanitary latrine facilities in each households of the study area from 1991 to 2001 shown below in the Table-5.2.3 and Map-5.3 to the context of the country.

Table-5.2.3: Spatial Change of Sanitary Latrine Facilities of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.6252	--- (Country total 1)	-----
2.	<b>High</b>	1.977-2.6252	-----	-----
3.	<b>Medium</b>	1.3309-1.976	--- (Country total 3)	-----
4.	<b>Low</b>	0.6836-1.3308	<b>1</b> (Country total 14)	Bogra.
5.	<b>Very Low</b>		<b>15</b> (Country total 46)	Dinajpur, Naogaon, Sirajganj, Pabna, Rajshahi, Natore, Rangpur, Nilphamari, Panchagarh, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Joypurhat, Nawabganj.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.2.

From the Table-5.2.3 and Map-5.3 observe that only 1-district like Bogra is in the low category (4<sup>th</sup> level) of the study area and the rest 15- districts like Dinajpur, Naogaon, Sirajganj, Pabna, Rajshahi, Natore, Rangpur, Nilphamari, Panchagarh, Gaibandha, Kurigram, Lalmonirhat, Thakurgaon, Joypurhat, Nawabganj area the very low category total 14-

districts and 46- districts respectively. These indicates that the changing level of sanitary latrine use is very low.

### 5.2.4 Spatial Changing Pattern of Electricity Connection of the Study Area: 1991

Electricity is the key driver of modern life and one of the most powerful indicator of urban development. The electricity connection is increasing day by day in urban area of Bangladesh due to changing the level of urbanization but this changes are not uniform in districts. District-wise changing pattern of electricity connection of the study area shown in the Table- 5.2.4 and Map- 5.4 to the context of the country statistics.

Table-5.2.4: Spatial Change of Electricity Connection of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.70809	--- (Country total 1)	
2.	<b>High</b>	0.52523-0.70809		
3.	<b>Medium</b>	0.34469-0.52522		
4.	<b>Low</b>	0.16415-0.34468	--- (Country total 1)	
5.	<b>Very Low</b>	-0.0164-0.16414	<b>16</b> (Country total 62)	Rajshahi, Pabna, Sirajganj, Nawabganj, Bogra, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat Thakurgaon, Dinajpur.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-6.3.

From the Table-5.2.4 and Map-5.4 found that all districts of the study area (16- districts like Rajshahi, Pabna, Sirajganj, Nawabganj, Bogra, Natore, Rangpur, Nilphamari, Joypurhat, Panchagarh, Naogaon, Gaibandha, Kurigram, Lalmonirhat Thakurgaon, Dinajpur) are in the very low category in respect of changing of electricity connection from 1991 to 2001 out of country total 46- districts i.e. no remarkable changes have been found in the study area in respect of electricity connection from 1991 to 2001 and the changing status in very low.

5.3: Spatial Change of Sanitary Latrine Facilities of the Study Area: 1991-2001

Source: Table-5.2.3.

5.4: Spatial Change of Electricity Connection of the Study Area: 1991-2001

Source: Table-5.2.4.

### 5.2.5 Spatial Changing Pattern of Sources of Drinking Water (Tubewell) of the Study Area: 1991-2001

The main source of pure drinking water is tube-well in Bangladesh. Though the use of tube-well is limited in the urban area, but it is widely used in the rural area in Bangladesh. District-wise use and changing pattern of tube-well use by household in the study area Map- 5.6 to the context of the country for better understanding on the issue.

Table-5.2.5: Spatial Change of Tube-Well use of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 1.02042	--- (Country total 1)	-----
2.	<b>High</b>	0.72045-1.02042	-----	-----
3.	<b>Medium</b>	0.42047-0.72044	-----	-----
4.	<b>Low</b>	0.12049-0.42046	--- (Country total 1)	-----
5.	<b>Very Low</b>	-0.1795-1.20480	<b>16</b> (Country total 62)	Sirajganj, Rajshahi, Rangpur, Naogaon, Nawabganj, Pabna, Bogra, Dinajpur, Joypurhat, Gaibandha, Natore, Kurigram, Thakurgaon, Lalmonirhat, Panchagarh, Nilphamari.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.4.

From the Table-5.2.5 and Map-5.5 observed that all the districts of the study area (16-districts like Sirajganj, Rajshahi, Rangpur, Naogaon, Nawabganj, Pabna, Bogra, Dinajpur, Joypurhat, Gaibandha, Natore, Kurigram, Thakurgaon, Lalmonirhat, Panchagarh, Nilphamari) are in the very low level in respect of tube-well use changing from 1991 to 2001 out of country total 62-districts. This statistics also indicates that the overall tube-well use changing pattern of the urban area of Bangladesh is stable & duties avoidable from 1991 to 2001 and taps are taken place instead of Tube-well use.

### 5.2.6 Spatial Changing Pattern of Literacy Rate of the Study Area: 1991-2001

Education is one of the basic need of the people. In live with the urbanization, the changing pattern of literacy rate has been changed. District-wise changing literacy rate of the study area from 1991 to 2001 as shown in the following Table- 5.2.6 and Map- 5.6 to the context of the country.

Table-5.2.6: Spatial Change of Literacy Rate of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

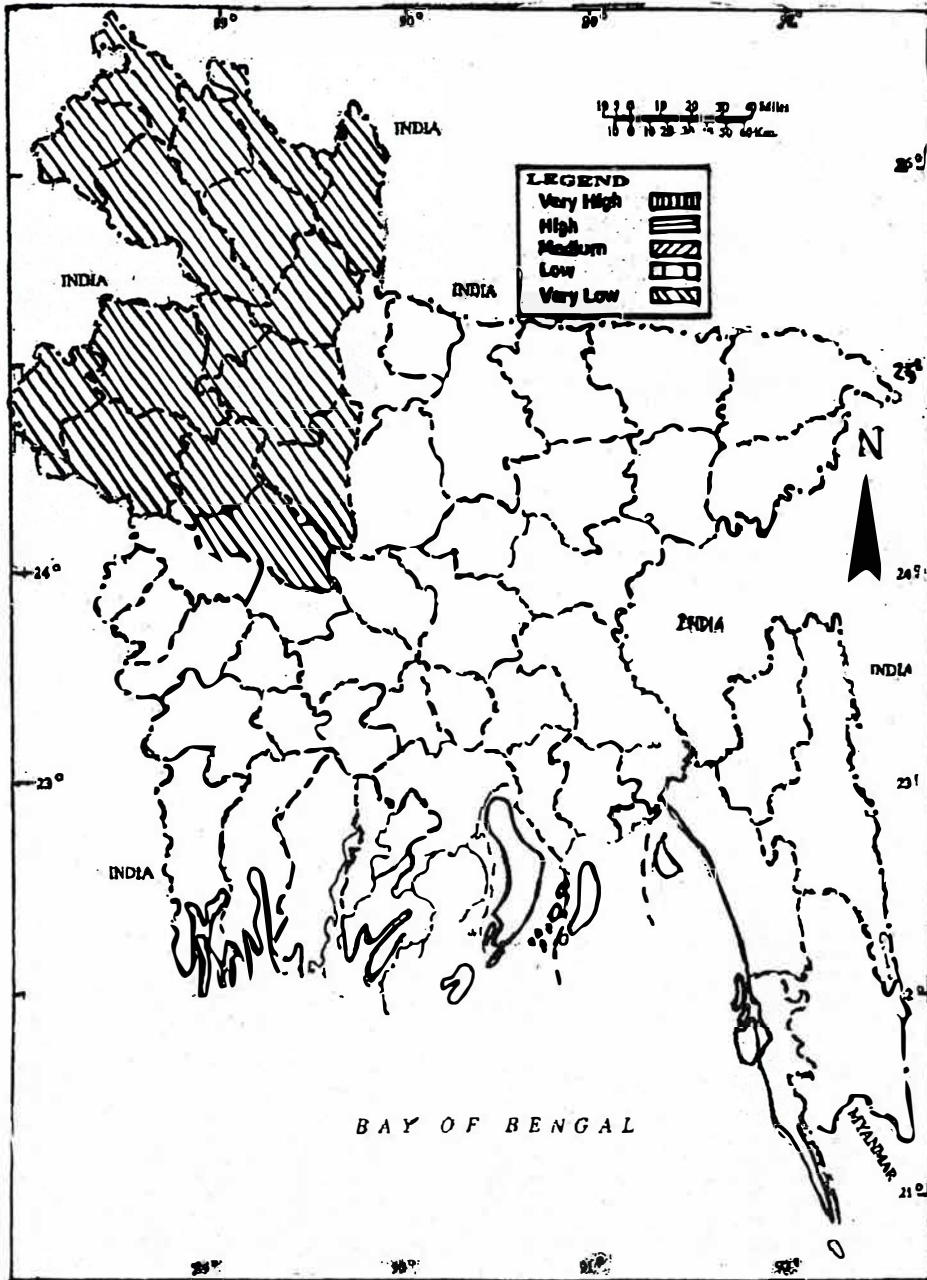

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.71228	--- (Country total 1)	
2.	<b>High</b>	0.53687-0.71228		
3.	<b>Medium</b>	0.36145-0.53688	--- (Country total 1)	
4.	<b>Low</b>	0.18603-0.36146	7 (Country total 12)	Bogra, Rangpur, Sirajganj, Dinajpur, Naogaon, Rajshahi, Gaibandha.
5.	<b>Very Low</b>	0.01060-0.18602	9 (Country total 49)	Pabna, Kurigram, Natore, Nilphamari, Nawabganj, Thakurgaon, Lalmonirhat, Joypurhat, Panchagarh.
<b>Total</b>			<b>16</b> (Country total 64)	

Source: Based on Appendix-6.5.

From the Table-5.2.6 and Map-5.6 found that only 7-districts like Bogra, Rangpur, Sirajganj, Dinajpur, Naogaon, Rajshahi, Gaibandha of the study area are in the low category (4th level) and the rest 9-districts like Pabna, Kurigram, Natore, Nilphamari, Nawabganj, Thakurgaon, Lalmonirhat, Joypurhat, Panchagarh are in the very low category (last level) in respect of changing of literacy rate from 1991 to 2001 out of country total 12-districts and 49-districts respectively. This statistics indicates that very minimum changes have been made in the study area, even in the country.

5.5: Spatial Change of Tube-Well use of the Study Area: 1991-2001

75

Source: Table-5.2.5.

5.6: Spatial Change of Literacy Rate of the Study Area: 1991-2001

Source: Table-5.2.6.

### 5.2.7 Spatial Changing Pattern of Urban Literacy Rate of the Study Area: 1991-2001

Urbanization is measured on the basis of urban literacy rate. Urban literacy rate is higher than rural literacy rate of Bangladesh. District-wise changing pattern of urban literacy rate form 1991 to 2001 are mentioned below in the Table-5.2.7 and Map-5.7 to the context of the country.

Table-5.2.7: Spatial Change of Urban Literacy Rate of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
	<b>Very High</b>	+ 0.71228	--- (Country total 1)	
	<b>High</b>	0.53687-0.71228	--- (Country total 3)	
	<b>Medium</b>	0.36145-0.53688	--- (Country total 2)	
	<b>Low</b>	0.18603-0.36146	3 (Country total 23)	Bogra, Gaibandha, Rangpur.
5.	<b>Very Low</b>	0.01060-0.18602	13 (Country total 36)	Sirajganj, Pabna, Dinajpur, Thakurgaon, Rajshahi, Nawabganj, Natore, Naogaon, Kurigram, Lalmonirhat, Panchagarh, Joypurhat, Nilphamari.
	<b>Total</b>		<b>16</b> (Country total 64)	

Source: Based on Appendix-6.6.

From the Table-5.2.7 and Map-5.7 observed that only 3-districts like Bogra, Gaibanda, Rangpur of the Study area are in the low category (4th level) in respect of changing of urban literacy rate and the rest 13-districts like Sirajganj, Pabna, Dinajpur, Thakurgaon, Rajshahi, Nawabganj, Natore, Naogaon, Kurigram, Lalmonirhat, Panchagarh, Joypurhat, Nilphamari are in the very low category (last level) out of country total 23-districts and 36-districts respectively. This statistics indicates that the level or urban literacy rate of the study area has been changed very little from 1991 to 2001, even in the country.

### 5.2.8 Spatial Changing Pattern of Primary Schools of the Study Area: 1991-2001

Primary education is the first level of education in Bangladesh. The number of primary schools are increasing in line with the increase of population of the country. District-wise statistics of the changing pattern

of the primary schools of the study area from 1991 to 2001 are shown in the following Table-5.2.8 and Map-5.8.

Table-5.2.8: Spatial Change of Primary Schools of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Stud Area	Name of the Districts of the Stud Area
1.	<b>Very High</b>	+ 0.332	--- (Country total 1)	
2.	<b>High</b>	-0.027-0.332	<b>2</b> (Country total 2)	Pabna, Kurigram.
3.	<b>Medium</b>	-0.385- -0.026	<b>4</b> (Country total 10)	Naogaon, Rangpur, Lalmonirhat, Gaibandha.
4.	<b>Low</b>	-0.743- -0.386	<b>5</b> (Country total 28)	Nilphamari, Natore, Nawabganj, Rajshahi, Panchagarh.
5.	<b>Very Low</b>	-1.100- -0.742	<b>5</b> (Country total 24)	Sirajganj, Joypurhat, Thakurgaon, Dinajpur, Bogra.
		<b>Total</b>	<b>16</b> (Country total 64)	

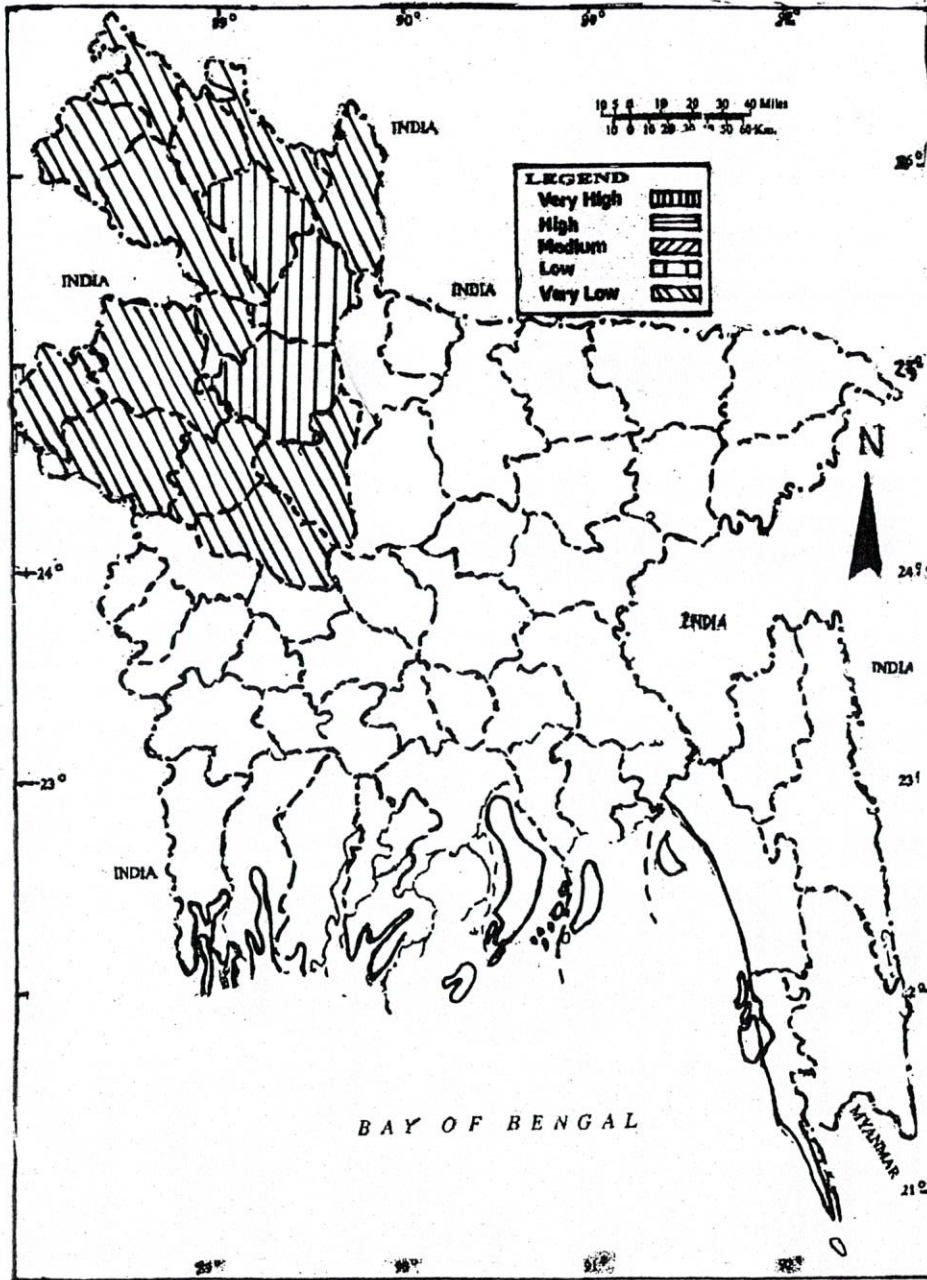

Source: Based on Appendix-6.7.

From the Table-5.2.8 and Map-5.8 observed that only 2-districts like pabna, Kurigram are in the high category (2nd level), 4-districts like Naogaon, Rangpur, Lalmonirhat, Gaibandha are in the medium category (3rd level), 5-districts like Nilphamari, Natore, Nawabganj, Rajshahi, Panchagarh are in the low category (4th level) and the rest 5-districts like Sirajganj, Joypurhat, Thakurgaon, Dinajpur, Bogra of the study area are in the very low category (last level) in respect of changing in number of primary school out of country total 2-districts, 10-districts, 28-districts and 24-districts respectively from 1991 to 2001. This statistics indicates that a number of primary schools increased from 1991 to 2001 in the study area, even in the country.

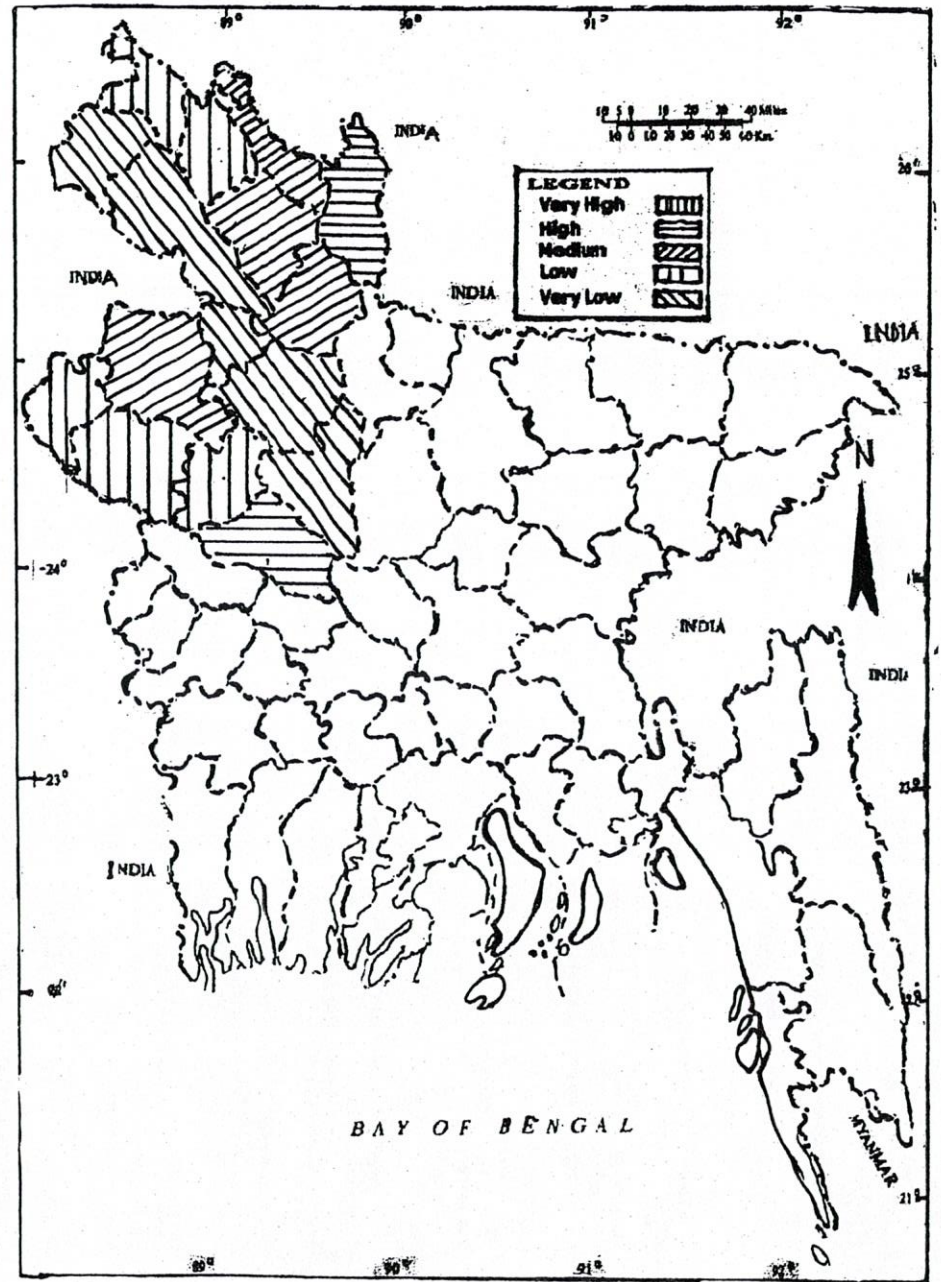

5.7: Spatial Change of Urban Literacy Rate of the Study Area: 1991-2001

78

Source: Table-5.2.7.

5.8: Spatial Change of Primary Schools of the Study Area: 1991-2001

Source: Table-5.2.8.

### 5.2.9 Spatial Changing Pattern of Secondary Schools of the Study Area: 1991-2001

Secondary education is in the 2nd level of education in Bangladesh. District-wise statistics regarding changing pattern of secondary school of the study area from 1991 to 2001 are shown in the Table- 5.2.9 and Map-5.9 to the context of the country.

Table-5.2.9: Spatial Change of Secondary Schools of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.09142	<b>2</b> (Country total 3)	Rajshahi, Panchagarh.
2.	<b>High</b>	0.01585-0.09142	<b>10</b> (Country total 24)	Thakurgaon, Gaibandha, Natore, Nilphamari, Dinajpur, Rangpur, Pabna, Sirajganj, Kurigram, Naogaon.
3.	<b>Medium</b>	-0.05975-0.01584	<b>4</b> (Country total 35)	Nawabganj, Lalmonirhat, Bogra, Joypurhat.
4.	<b>Low</b>	-0.13533- -0.05974	-----	-----
5.	<b>Very Low</b>	-0.2109- -0.13532	--- (Country total 2)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.8.

From the Table-5.2.9 and Map-5.9 found that only 2-districts like Rajshahi, Panchagarh of the study area are in the very high category (1st level), 10-districts like Thakurgaon, Gaibandha, Natore, Nilphamari, Dinajpur, Rangpur, Pabna, Sirajganj, Kurigram, Naogaon are in the high category (2nd level) and the rest 4-districts like Nawabganj, Lalmonirhat, Bogra, Joypurhat are in the medium category (3rd level) of the study area in respect of changing in number of secondary schools from 1991 to 2001 out of country total 3-districts, 24-districts and 35-districts respectively. This statistics proves that the changing rate in number of secondary schools of the study area has remarkably changed, even in the country, i.e. number of secondary school has increased from 1991 to 2001 in a considerable rate but not uniformly.

### 5.2.10 Spatial Changing Pattern of Colleges of the Study Area: 1991-2001

College is the 3rd level of education in Bangladesh. District-wise statistics of changing in number of colleges from 1991 to 2001 of the study area are mentioned below in the Table-5.2.10 and Map-5.10 to the context of the country.

Table-5.2.10: Spatial Change of Colleges of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

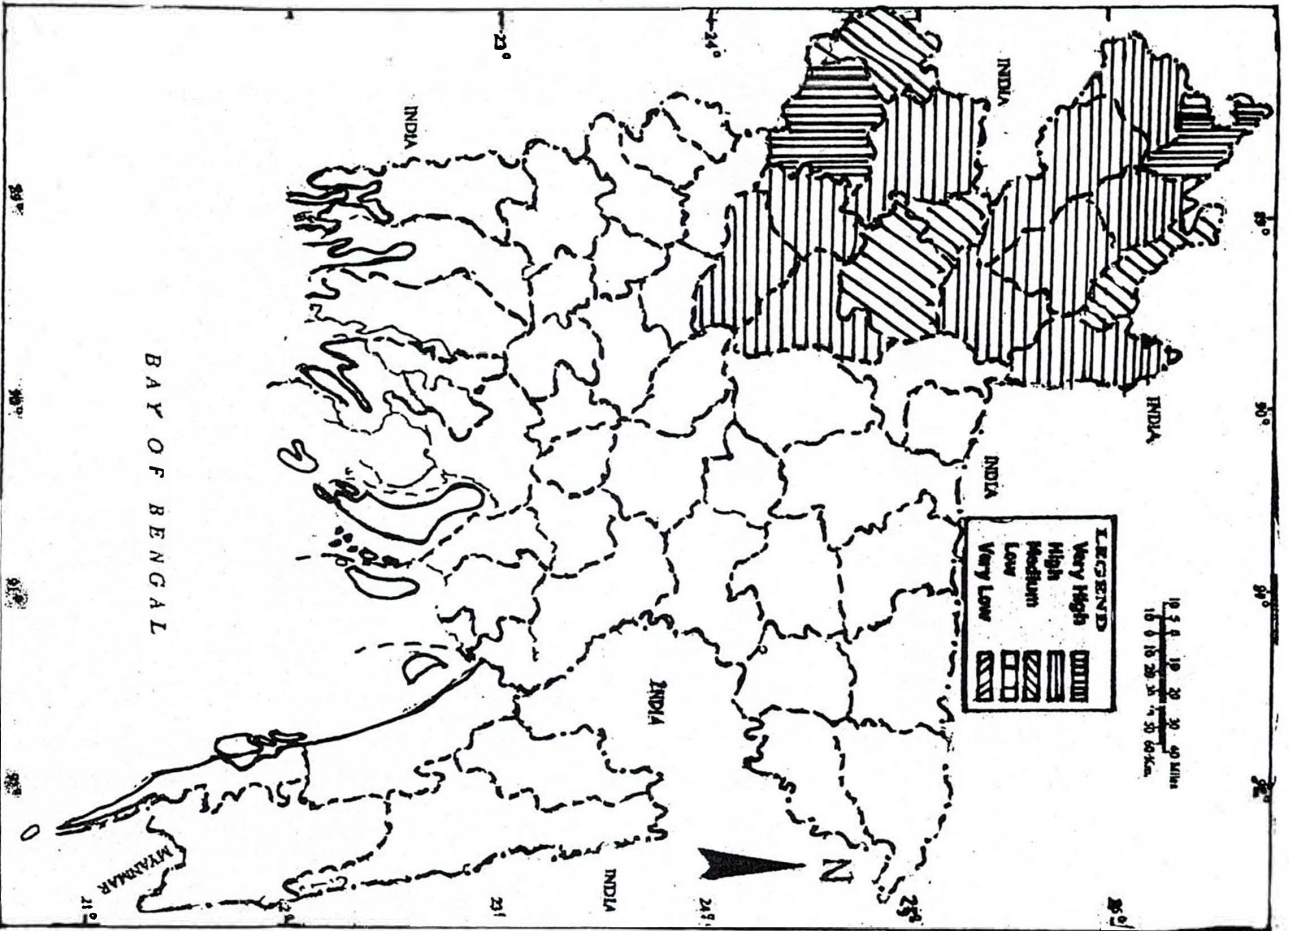

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.96360	--- (Country total 1)	-----
2.	<b>High</b>	0.02713-0.96360	<b>2</b> (Country total 2)	Sirajganj, Rajshahi.
3.	<b>Medium</b>	-0.04213-0.02712	<b>14</b> (Country total 60)	Naogaon, Rangpur, Gaibandha, Dinajpur, Nawabganj, Lalmonirhat, Nilphamari, Panchagarh, Kurigram, Thakurgaon, Joypurhat, Pabna, Bogra, Natore.
4.	<b>Low</b>	-0.11137- -0.04213	-----	-----
5.	<b>Very Low</b>	-0.18060- -0.11136	--- (Country total 1)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	-----

Source: Based on Appendix-6.9.

From the Table-5.2.10 and Map-5.10 found that 14-districts like Naogaon, Rangpur, Gaibandha, Dinajpur, Nawabganj, Lalmonirhat, Nilphamari, Panchagarh, Kurigram, Thakurgaon, Joypurhat, Pabna, Bogra, Natore are in the medium category (3rd level) and only 1-district like Rajshahi is in the very low category (last level) of the study area in respect of changing in number of colleges out of country total 28-districts, 22-districts and 4-districts respectively. This statistics indicates that the rate of increasing in number of colleges is slow-form 1991 to 2001 in the study area and Rajshahi district having divisional town has more or less zero level increase in the number of colleges from 1991 to 2001 is questionable to the urbanization.

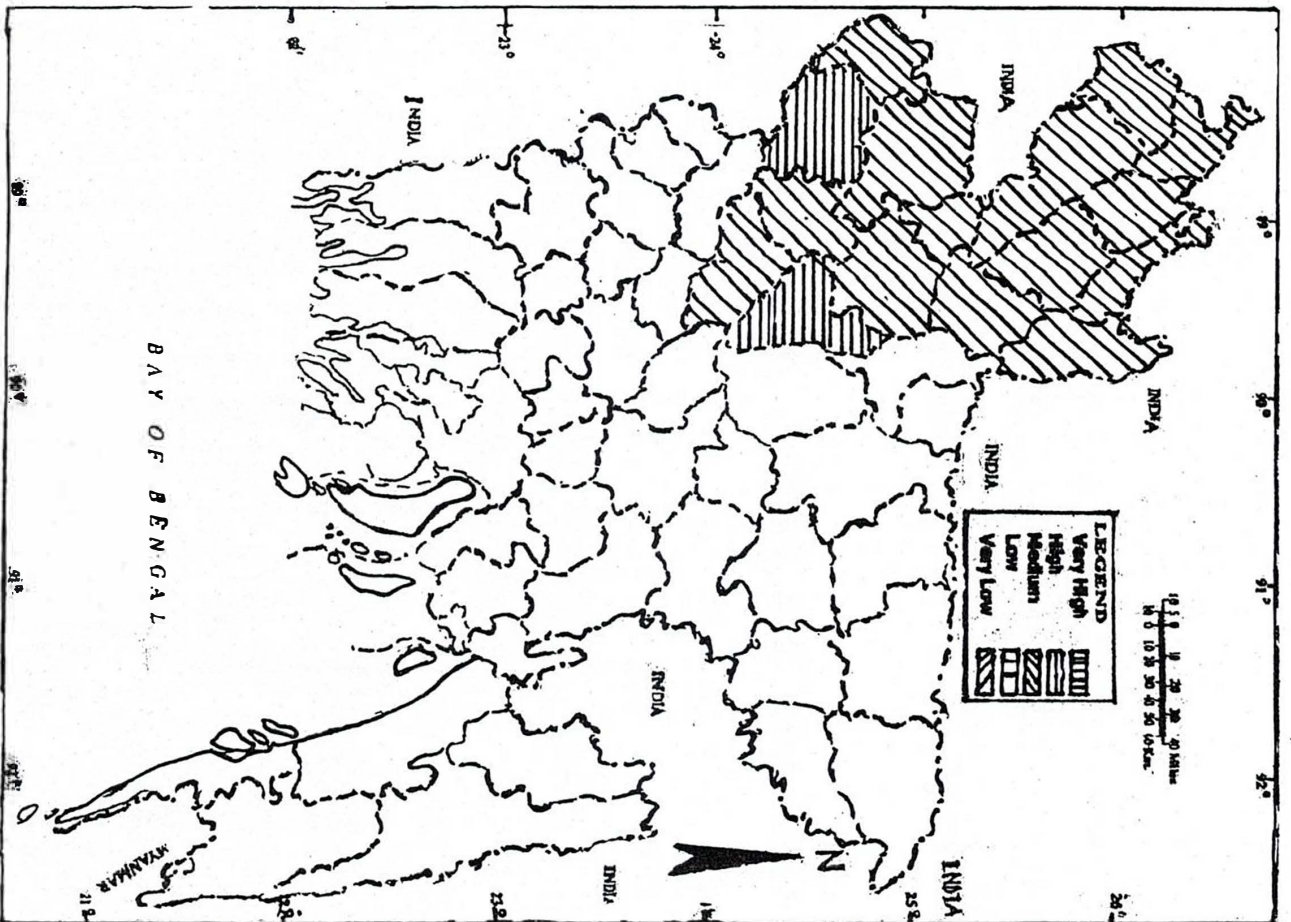

5.9: Spatial Change of Secondary Schools of the Study Area: 1991-2001

Source: Table-5.2.9.

5.10: Spatial Change of Colleges of the Study Area: 1991-2001

### 5.2.11 Spatial Changing Pattern of Metal Road of the Study Area: 1991-2001

The good communication system is the pre-condition of economic development. The contribution of Road way is important for the communication system of Bangladesh. District-wise change pattern of Metal Road from 1991 to 2001 of the study area to the context of the country has shown in the following Table- 5.2.11 and Map- 5.11.

Table-5.2.11: Spatial Change of Metal Road of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 2.7254	--- (Country total 2)	-----
2.	<b>High</b>	1.5525-2.7254	--- (Country total 8)	-----
3.	<b>Medium</b>	0.3797-0.5524	<b>9</b> (Country total 28)	Rangpur, Gaibandha, Pabna, Nilphamari, Joypurhat, Nawabganj, Sirajganj, Panchagarh, Naogaon.
4.	<b>Low</b>	-0.7934-0.3796	<b>6</b> (Country total 22)	Lalmonirhat, Bogra, Natore, Dinajpur, Kurigram, Thakurgaon.
5.	<b>Very Low</b>	-1.9662- -0.7933	<b>1</b> (Country total 4)	Rajshahi.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.10.

From the Table- 5.2.11 and Map- 5.11 found that 9-districts like Rangpur, Gaibandha, Pabna, Nilphamari, Joypurhat, Nawabganj, Sirajganj, Panchagarh, Naogaon of the study area has been increased Metal Road from 1991 to 2001 in the medium category, 6-districts like Lalmonirhat, Bogra, Natore, Dinajpur, Kurigram, Thakurgaon has been increased Metal Road from 1991 to 2001 in the low category (minimum rate) and only 1-district like Rajshahi has been increased Metal Road form 1991 to 2001 in the very low category (very minimum rate) out of country total 28-districts, 22-districts and 4-districts respectively.

### 5.2.12 Spatial Changing Pattern of Semi-Metal Road of the Study Area: 1991-2001

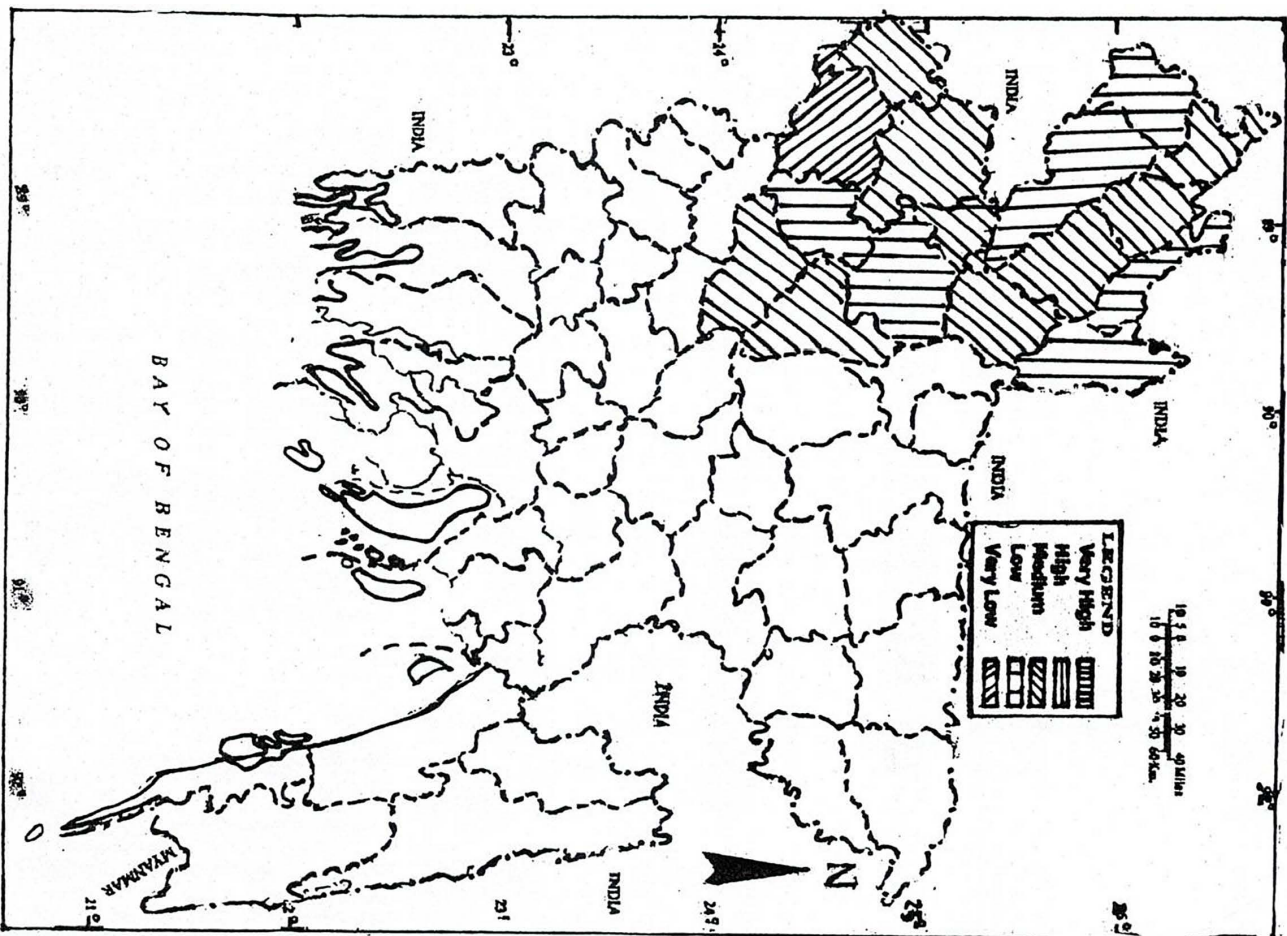

The importance of Semi-Metal Road in Bangladesh is unlimited. District-wise statistics of the changing in the length of semi-Metal Road of the study area from 1991 to 2001 to the context of the country are shown in the Table- 5.2.12 and Map-5.12.

Table-5.2.12: Spatial Change of Semi-Metal Road of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

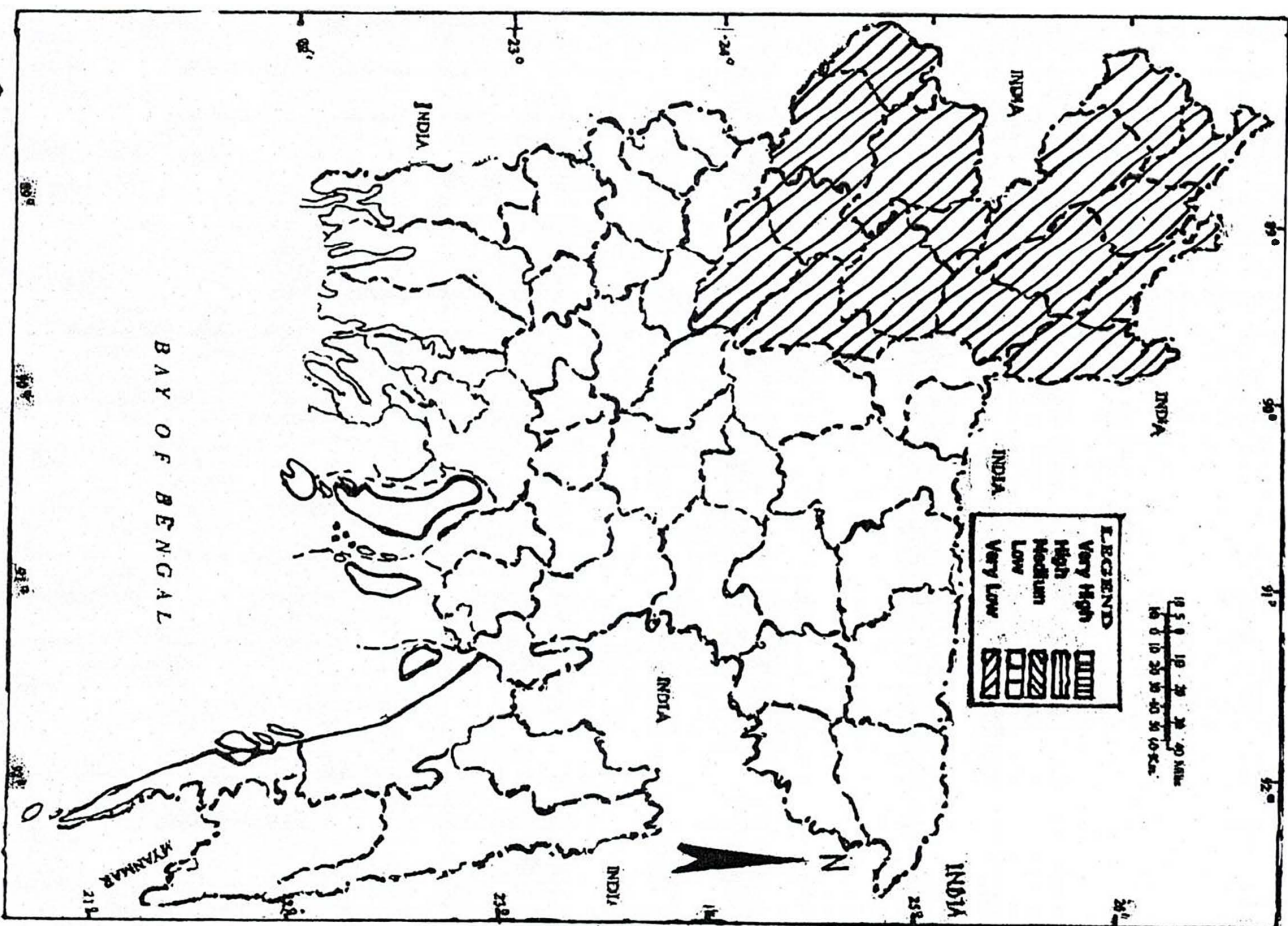

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 17.46678	--- (Country total 2)	-----
2.	<b>High</b>	13.11377-17.46678	-----	-----
3.	<b>Medium</b>	8.76075-13.11376	--- (Country total 2)	-----
4.	<b>Low</b>	4.40773-8.76074	--- (Country total 3)	-----
5.	<b>Very Low</b>	0.05470-4.40772	<b>16</b> (Country total 57)	Rajshahi, Natore, Pabna, Naogaon, Kurigram, Nilphamari, Joypurhat, Sirajganj, Gaibandha, Bogra, Rangpur, Dinajpur, Lalmonirhat, Nawabganj, Panchagarh, Thakurgaon.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.11.

From the Table-5.2.12 and Map-5.12 found that all districts (16- districts like Rajshahi, Natore, Pabna, Naogaon, Kurigram, Nilphamari, Joypurhat, Sirajganj, Gaibandha, Bogra, Rangpur, Dinajpur, Lalmonirhat, Nawabganj, Panchagarh, Thakurgaon) of the study area has been changed very minimum and changing pattern is in the very low category in respect of length of semi-Metal Road from 1991 to 2001 out of country total 57-districts.

Source: Table-5.2.11.

Source: Table-5.2.12.

### 5.2.13 Spatial Changing Pattern of Kutcha Road of the Study Area: 1991-2001

Kutcha road (made by only soil) is very important in rural area of Bangladesh but in the urban area, the length of Kutcha road is less than rural area. District-wise changing pattern of Kutcha Road of the study area from 1991 to 2001 to the context of the country is shown below in the Table- 5.2.13 and Map- 5.13.

Table-5.2.13: Spatial Change of Kutcha Road of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.38794	--- (Country total 1)	-----
2.	<b>High</b>	0.15719-0.38794	--- (Country total 2)	-----
3.	<b>Medium</b>	-0.07359-0.15718	13 (Country total 51)	Kurigram, Gaibandha, Lalmonirhat, Nawabganj, Joypurhat, Thakurgaon, Sirajganj, Panchagarh, Natore, Naogaon, Dinajpur, Pabna, Bogra.
4.	<b>Low</b>	-0.30434- -0.07358	3 (Country total 6)	Nilphamari, Rajshahi, Rangpur.
5.	<b>Very Low</b>	-0.53510- -0.30433	--- (Country total 2)	-----
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.12.

From the Table-5.2.13 and Map-5.13. found that the increase of Kutcha road of only 1-district like Rajshahi is very low due to transform into semi-Metal Road and into Metal Road, indicates the negative change out of country 2-districts and 13-districts like Kurigram, Gaibandha, Lalmonirhat, Nawabganj, Joypurhat, Thakurgaon, Sirajganj, Panchagarh, Natore, Naogaon, Dinajpur, Pabna Bogra of the study area are in the low category out of country total 57- districts.

### 5.2.14 Spatial Changing Pattern of Bank Deposit of the Study Area: 1991-2001

Bank is an important phenomenon of the economy. How much money is deposited to the Bank in the specific period of time of an year under the surroundings of the Bank is measured the picture of the area. District-wise picture of Bank deposit changing pattern from 1991 to 2001 of the study area to the context of the country is shown in the Table- 5.2.14 and Map- 5.14.

Table-5.2.14: Spatial Change of Bank Deposits of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.38794	--- (Country total 1)	-----
2.	<b>High</b>	0.15719-0.38794	--- (Country total 2)	-----
3.	<b>Medium</b>	-0.07359-0.15718	--- (Country total 3)	
4.	<b>Low</b>	-0.30434- -0.07358	<b>15</b> (Country total 56)	Kurigram, Gaibandha, Lalmonirhat, Nawabganj, Joypurhat, Thakurgaon, Sirajganj, Panchagarh, Natore, Naogaon, Dinajpur, Pabna, Bogra, Nilphamari, Rangpur.
5.	<b>Very Low</b>	-0.53510- -0.30433	--- (Country total 2)	Rajshahi
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.13.

From the Table- 5.2.14 and Map- 5.14 found that the Bank deposit of the 15-districts like Kurigram, Gaibandha, Lalmonirhat, Nawabganj, Joypurhat, Thakurgaon, Sirajganj, Panchagarh, Natore, Naogaon, Dinajpur, Pabna, Bogra, Nilphamari, Rangpur of the study area has increased in medium category (3rd level) and Bank deposit of only 3-districts like Nilphamari, Rajshahi, Rangpur of the study area increased in low category or rate (4th level) out of country total 51- districts and 6-districts respectively from 1991 to 2001, i.e. no remarkable increases have been found in the study area from 1991 to 2001.

### 5.2.15: Spatial Change of Registered Rickshaws of the Study Area: 1991-2001

Rickshaw in one of the important transportation system of Bangladesh. The importance of Rickshaw in the urban area is higher than rural area. Districts-wise changing pattern of Register Rickshaws of the study area from 1991 to 2001 to the context of the country are shown in the Table-5.2.15 and Map- 5.15.

Table-5.2.15: Spatial Change of Registered Rickshaws of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.00582	--- (Country total 1)	-----
2.	<b>High</b>	0.00425-0.00582	-----	-----
3.	<b>Medium</b>	0.00267-0.00424	-----	-----
4.	<b>Low</b>	0.00109-0.00266	3 (Country total 25)	Bogra, Pabna, Natore.
5.	<b>Very Low</b>	-0.0005-0.00109	13 (Country total 38)	Rajshahi, Nawabganj, Rangpur, Gaibandha, Lalmonirhat, Dinajpur, Thakurgaon, Naogaon, Joypurhat, Kurigram, Nilphamari, Sirajganj, Panchagarh.
		<b>Total</b>	16 (Country total 64)	

Source: Based on Appendix-6.14.

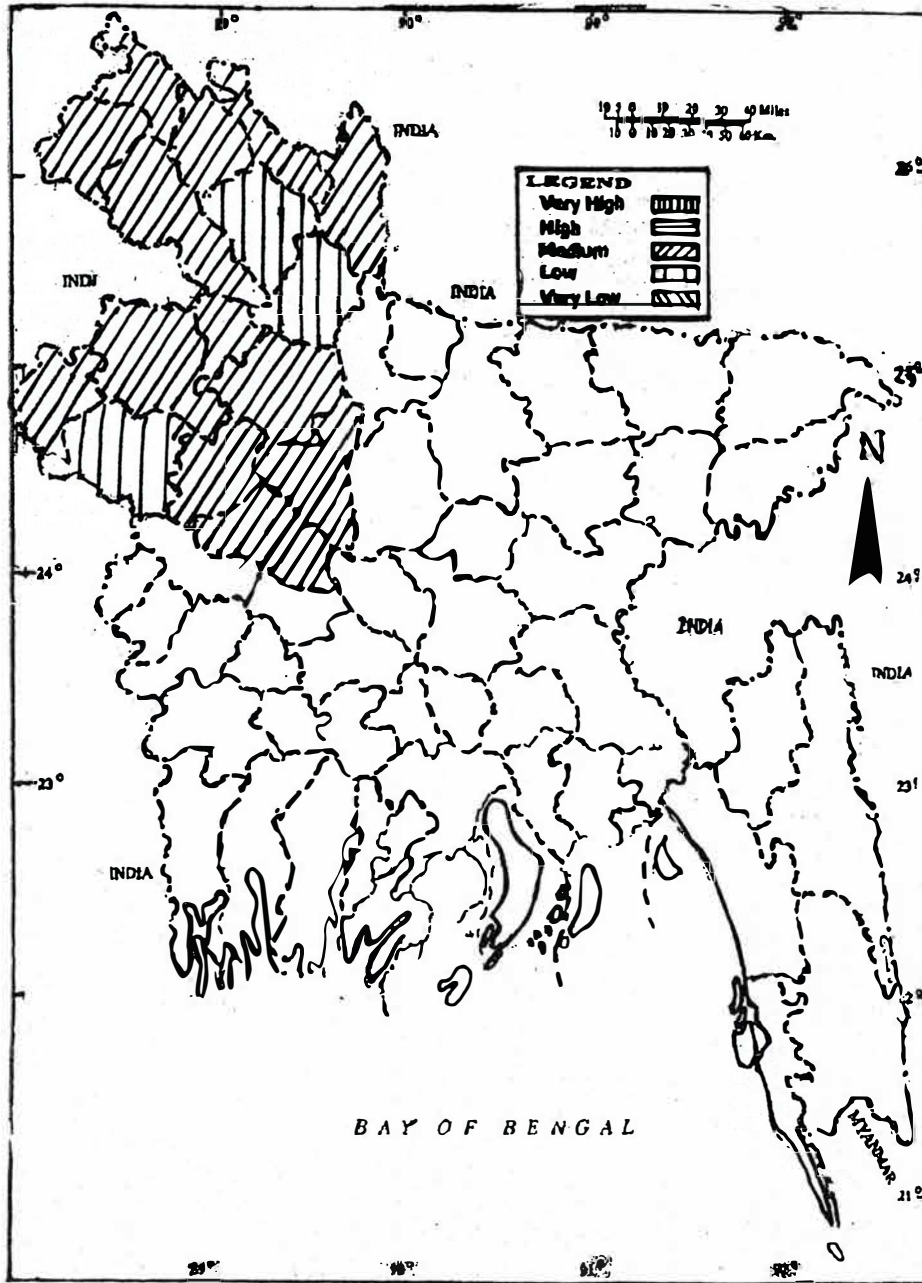

From the Table-5.2.15 and Map-5.15 found that the registered rickshaws has been increased of 3-districts like Bogra, Pabna, Natore of the study are in low rate out country total 25-districts and also the registered rickshaws has been increased in a very minimum (low) rate of the 13-districts like Rajshahi, Nawabganj, Rangpur, Gaibandha, Lalmonirhat, Dinajpur, Thakurgaon, Naogaon, Joypurhat, Kurigram, Nilphamari, Sirajganj, Panchagarh of the study area out of country total 38- districts from 1991 to 2001.

### 5.2.16 Spatial Changing Pattern of Municipalities of the Study Area: 1991-2001

Counting of District Sadar other important areas of Bangladesh, the number of Municipalities has been increased remarkably, District-wise changing pattern of Municipalities in number of the study area has been shown in the Table-5.2.16 and Map-5.16 to the context of the country from 1991 to 2001.

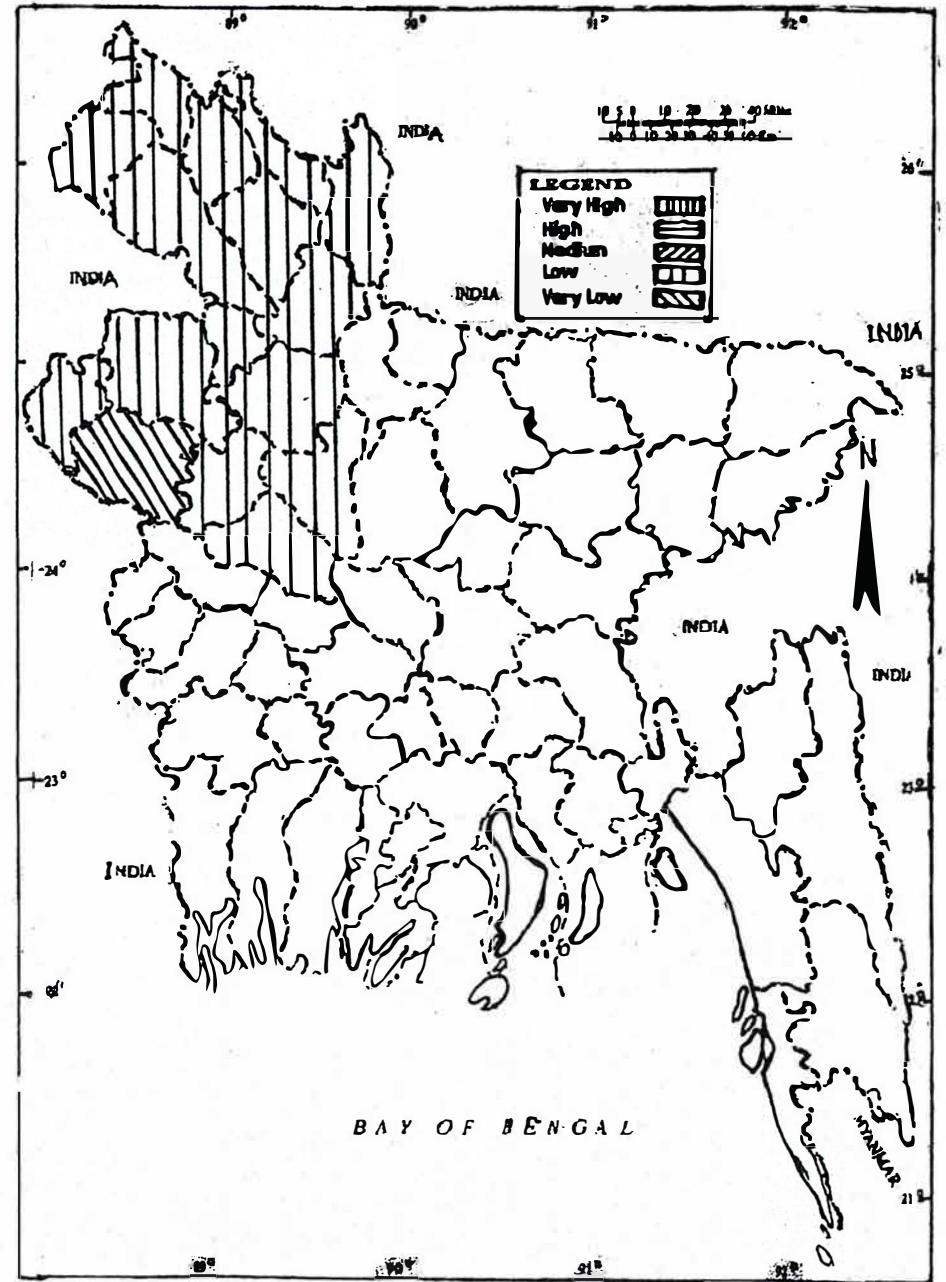

5.13: Spatial Change of Kutchha Road of the Study Area: 1991-2001

Table-5.2.16: Spatial Change of Municipalities of the Study Area to the context of the Country based on Davidovich Model (1973) 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 0.83262	<b>2</b> (Country total 14)	Rajshahi, Pabna.
2.	<b>High</b>	0.16625-0.83262	<b>3</b> (Country total 6)	Joypurhat, Gaibandha, Dinajpur.
3.	<b>Medium</b>	-0.50014-0.16624	<b>4</b> (Country total 9)	Natore, Naogaon, Kurigram, Lalmonirhat.
4.	<b>Low</b>	-1.18824- -0.50013	<b>4</b> (Country total 18)	Bogra, Rangpur, Nilphamari, Panchagarh.
5.	<b>Very Low</b>	-1.8329- -1.16651	<b>3</b> (Country total 17)	Sirajganj, Thakurgaon, Nawabganj.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.15.

From the Table-5.2.16 and Map-5.16, it is evident that the number of Municipalities of 2-districts like Rajshahi, Pabna of the study area has been changed remarkably from 1991 to 2001, i.e. the changing rate is very high out of country total 14-districts. It is also found that 3-districts of like Joypurhat, Gaibandha, Dinajpur of the study area are in the high category out of country total 6-districts, 4-districts like Natore, Naogaon, Kurigram, Lalmonirhat of the study area are in the medium category out of country total 9-districts, 4-districts like Bogra, Rangpur, Nilphamari, Panchagarh of the study area are the low category out of country total 18-districts and 3-districts like Sirajganj, Thakurgaon, Nawabganj of the study area are in the very low out of country total 17-districts. So, the changing rate of Municipalities in number is high which indicates the improvement of situation of the study area.

### 5.2.17 Spatial Changing Pattern of GDP from Agricultural Sector of the Study Area: 1991-2001

The lion share of contribution to the economy of Bangladesh is the Agricultural-Sector. The economy of Bangladesh is basically based on Agriculture. District-wise changing pattern of contribution of Agricultural sector to the GDP of the Study area to the context of the country from 1991 to 2001 are shown in the following Table- 5.2.17 and Map-5.17.

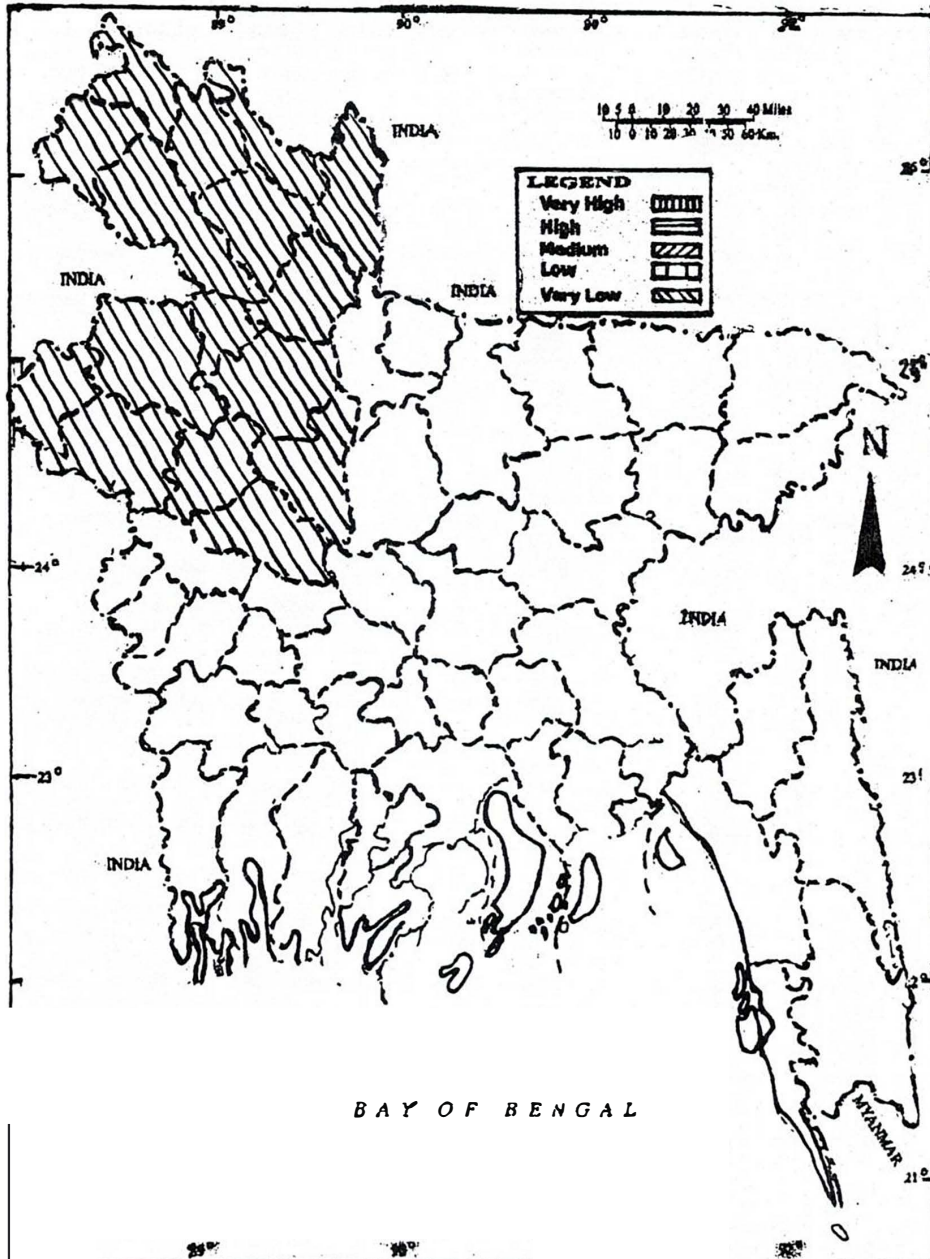

Table-5.2.17: Spatial Change of GDP from Agricultural Sector of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Z-Score Category	Z-Score Range	No. of Districts of the Study Area	Name of the Districts of the Study Area
1.	<b>Very High</b>	+ 3.7542	--- (Country total 1)	-----
2.	<b>High</b>	2.7143-3.7542	-----	-----
3.	<b>Medium</b>	1.6743-2.7144	-----	-----
4.	<b>Low</b>	0.6343-1.6742	-----	-----
5.	<b>Very Low</b>	-0.4056-0.6342	<b>16</b> (Country total 63)	Rajshahi, Pabna, Sirajganj, Kurigram, Nawabganj, Naogaon, Lalmonirhat, Joypurhat, Panchagarh, Bogra, Thakurgaon, Natore, Nilphamari, Dinajpur, Gaibandha, Rangpur.
		<b>Total</b>	<b>16</b> (Country total 64)	

Source: Based on Appendix-6.16.

From the Table-5.2.17 and Map-5.17 found that agricultural contribution to the GDP from 1991 to 2001 of the study area (16-districts like Rajshahi, Pabna, Sirajganj, Kurigram, Nawabganj, Naogaon, Lalmonirhat, Joypurhat, Panchagarh, Bogra, Thakurgaon, Natore, Nilphamari, Dinajpur, Gaibandha, Rangpur) has not been change in a considerable rate, i.e. very low rate changing shows to the context of country total 63-districts, this statistics also indicates that the changing rate of agri-sector contribution to the GDP of the study area is very low due to the transformation of primary economic activities (agriculture) to the secondary and tertiary economic activities (non-agricultural activities) and it is a good picture of the study area.

5.17: Spatial Change of GDP from Agricultural Sector of the Study Area: 1991-2001

Source: Table-5.2.17.

### 5.2.18 Ranking in Spatial Changes in Levels of Urbanization of the Study Area: 1991-2001

To measure the spatial pattern and changing pattern of urbanization in the study area from 1991 to 2001. 16-Variables have been used, discussed and analysed in this chapter. The composite rank of the districts of the study area to the context of the country from 1991 to 2001 on the basis of the selected 16-variables are shown in the following Table- 5.18.

Table-5.2.18: Spatial Change of Composite Rank in Levels of Urbanization of the Study Area to the context of the Country based on Davidovich Model (1973): 1991-2001

Sl. No.	Name of the Districts	Rank	Sl. No.	Name of the Districts	Rank

32.	Jhanaidah	32	64.	Jhalokati	64

Source: Based on Appendix-5.

From the Table-5.2.18, it is observed that the urbanization process of sirajgonj, Rajshahi, Rangpur, Dinajpur and Bogra district has been occurred and the ranking of the districts of the study area are 5, 9, 10, 11 and 14 respectively to the context of the country but the inter-districts ranking of the study area are 1, 2, 3, 4 and 5 respectively. The other districts of the study area like Nawabgonj, Pabna, Naogaon, Nilphamari, Thakurgaon, Kurigram, Gaibandha, Lalmonirhat, Natore, Panchagarh, Joypurhat has been occurred the urbanization process in the lower rate and the ranking of the districts are 20, 27, 30, 33, 36, 38, 39, 42, 43, 44, 58 respectively but the inter-districts ranking of the study area are 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16 respectively. For the composite ranking of the spatial change pattern of urbanization no specific variable have been given importance and 16-variable have been chosen for the study has given the equal importance. The Spatial changing pattern of urbanization of a district can easily be said from the location of composite ranking Table-5.2.18. The location of a district in the Table-5.2.18 can be determined the spatial changing rate of urbanization, of a district how much i.e if the location of a district in the composite ranking Table- is high, then the spatial changing pattern of the said district is equally high. The computation of composite ranking of the study area to the context of the country in respect of the spatial changes in urbanization has been shown in the appendix-7.

### **5.3 Conclusion**

From the analysis of the spatial changing pattern of urbanization from 1991 to 2001, some inequalities are found. The selected variables under study are not uniformly changed; i. e. the spatial or areal differentiation or inequalities have been found in the inter-district changing pattern of urbanization from 1991 to 2001. In the present study basically the various characteristic features of spatial inequalities of the charging pattern of urbanization of the study area have been examined on the basis of spatial analysis of the selected variables, it has divided into the five classes or categories to show the location of the districts in respect of changing in urbanization to the context of the country.

From the analysis of the selected variables, it is observed that the overall changing rate of the selected variables of Sirajgong districts is higher than the other districts of the study area and this changing rate is very low in the district of Joypurhat among the districts of the study area (Table-5.2.1).

In the next chapter, summary findings of the study concluding remarks and recommendations will be highlighted and discussed in brief.

## **Chapter Six**

  - 6.4.3 Increase of Infrastructural Development
  - 6.4.4 Formulation and Proper Implementation of Govt. Urban Policy
  - 6.4.5 Increase of Research Works

## **Chapter Six**

### **Summary, Conclusion and Recommendations**

#### **6.1 Introduction**

Bangladesh has been facing a rapid trend of urbanization in the recent decades and urbanization in Bangladesh takes the form of rapid growth of urban population, largely due to natural growth, rural-urban migration and growing importance of local resources. Urbanization is an indicator of development and modernization, but it is not uniform in all the urban centres of Bangladesh. When the urbanization becomes over, not uniform, uneven, uncontrolled and unpredictable, it creates various threats to the urban society, further development & urban habitat. The study attempts to provide the level of urbanization, spatial (inter-districts) patterns and changing patterns in the level of urbanization & urban amenities or facilities by and large focusing on the North-Western Regions of Bangladesh. Basically, the main thrust of this study is to present an overview of urbanization in North-Western Regions of Bangladesh based on secondary data sources and previous literatures that generate an understanding on its real picture of study area. Standardized Model (Z-Score) of Davidovich Model have been used as analysis techniques on 16-Variables and it is felt by the researcher that the findings of the study will be helpful further research works to the discipliners, urban development planners and also to the government of Bangladesh for future urban planning & development. Sheer volume of literature review reveals that no study has been found on the title, even on the study area as yet, which has created a high notion of expectation to study on “**Urbanization in North-Western Regions of Bangladesh**”.

## 6.2 Summary Findings of the Study

It is found from the study that Sirajgonj and Rajshahi districts are in the better position in respect of changing in levels urbanization of the study area. On the other hand, Rajshahi and Sirajgonj districts are also in the better position than that of the other districts of the study area in respect of change in the share of urban population (Appendix-6.1) from 1991 to 2001.

From the Appendix-6.2, it is found that Bogra district is the 1st position of the study area and 5th position to the context of the country in respect of change in the sanitary latrine facilities from 1991 to 2001.

In respect of change in the electricity connection, the Rajshahi district is in the higher position of the study area and also hold the 5th position of the country from 1991 to 2001 (Appendix-6.3). In respect of change in the tube-well use as a source of drinking water, Sirajogonj district is in the first position, Rajshahi district is in the 2nd position and Ranjpur district is in the 3rd position of the study area of the country (Appendix-6.4). In respect of change in the literacy rate, the Bogra, Ranjpur and Siraj districts are in the 1st, 2nd and 3rd positions of the study area and also hold the 6th, 7th and 8th positions respectively of the country (Appendix-6.5). In respect of change in urban literacy rate, the Bogra, Gaibandha and Ranjpur district area in the 1st, 2nd and 3rd positions of the study area and also hold the 8th, 10th and 14th position respectively of the country (Appendix-6.6)

In respect of change in the number of primary school, the Kurigram, Noagaon and Ranjpur districts are in the 1st, 2nd and 3rd positions of the study area and also held the 6th, 9th and 10th positions respectively of the country (Appedix-6.7) In respect of change in the number of Secondary school, The Rajshahi, Panchagorh and Thakurgao districts are in the 1st, 2nd and 3rd and 5th positions respectively of the country (Appendix-6.8). In respect of change in the number of are in the 1st, 2nd and 3rd positions

and also hold the 2nd, 3rd and 5th positions respectively of the country. (Appendix 6.9)

In respect of change in the Metal Road, the Ranjpur, Gaibandha and Pabna districts are in the 1st, 2nd and 3rd positions of the study area and also hold the 11th, 15th and 18th positions respectively of the country (Appendix 6.10). In respect of change in the Semi-Metal Road, The Rajshahi, Paban and Bogra districts are in the 1st, 2nd and 3rd and 16th positions respectively of the country (Appendix-6.11). In respect of change in the Kutcha, Road, the Gaibandha, Kurigram and Nilphamari districts are in the 1st, 2nd and 3rd positions of the study area and also hold the 9th, 12th and 13th positions respectively of the country. (Appendix-6.12)

In respect of change in the amount of Bank Deposit, the Kurigram, Gaibandha and Lalmonirhat districts are in the 1st, 2nd and 3rd positions of the study area and also hold the 18th, 29th and 30th positions respectively of the country. (Appendix-6.13)

In respect of change in the number of Registered Rickshaws, the Bogra, Pabna and Natore districts are in the 1st, 2nd and 3rd position of the study area and also hold the 4th, 5th and 6th positions respectively of the country (Appendix-6.16).

Lastly, in respect of the composite ranking in the spatial changing rate of urbanization on the basis of the selected 16-variables of the study, the Pabna, Rajshahi and Ranjpur districts are in the 1st, 2nd and 3rd ranks of the study area and also hold the 4th, 8th and 14th ranks respectively of the country (Appendix-7) and this statistics also shows that the overall position of the study area (North-west regions of Bangladesh) in respect of ranking is good to the context of the country both for the level of urbanization and spatial changes in urbanization pattern.

From the study findings, it is observed that most of the cities or urban centres of the study area found low level of urbanization to the context of the country except few cases in 1991 & 2001 and also spatial changing patten of urbanization & urban development indicators are not satisfactory from 1991 to 2001 and the development of urbanization & urban amenities are not uniform in all the districts of the study area.

Despite the urban area of the North-Western Regions of Bangladesh has been developed in respect of level of urbanization, spatial (inter-district) patterns and spatial development of urbanization & urban amenities for the Census Periods from 1991 to 2001, but the level of urbanization, spatial patterns, urban development & urban amenities are not occurred uniformly in all the urban centres of North-Western Regions of Bangladesh, creates various problems to the urban society, even though, over & uncontrolled growth of population, unplanned & unevenness in development & urban facilities has become the great threat for smooth & uniform development of the region.

Thus the study concludes that a goal based & need based urban planning is required for the government & urban planners for equal, uniform & need based development of the region and otherwise, misleading & inappropriate decision will be taken from the government end, which will be unsuccessful planning for sustainable development for the coming days.

### **6.3 Conclusion**

In the present era of urbanization, equal development and equal opportunities are the common goal & expectation to both of the developing (like Bangladesh) and developed countries. But in this unequal world, a common policy “one size fit for all” of urban centres or cities and its ubiquitous applicability for as a goal is questionable. From this point of view, the study focuses on the level of urbanization, spatial patterns & changes in the level of urbanization, urban development & urban amenities or facilities of the study area. The characteristic of urbanization in Bangladesh is still low in terms of level and in countrywide perspective is steadily growing; but nature of overall growth is problematic and deserves much attention in all sectors of development authorities. Urbanization in Bangladesh lacks in good governance and we need an honest, democratic & patriotic government. Civil society should come forward with much patriotic vision rather personal or group interests. The conceptual background of this study might be helpful to explore whether the existing urban development & urban facilities should be a goal or principle of sustainable urban development policy in the cities or urban centres of Bangladesh.

## **6.4 Recommendations**

Urbanization of the study area, even in Bangladesh is in the root level still now, i.e. low in terms of level. The degree and level of urbanization in Bangladesh has increased remarkably in the past few decades but it was unplanned and not uniform. This type of unplanned and uneven urbanization has been creating various problems and threatening the development work of the country. So, some step should be taken from the government of Bangladesh end to check the unplanned and imbalanced urbanization which are depicted below for the betterment of the nation as whole.

### **6.4.1 Control of Urban Population Increase**

The increasing trend of urban population of Bangladesh is excess both in number and rate. So, the uncontrolled urban population growth must be checked and controlled by any means. On the other hand, if it is possible to distribute the urban population equally, the equal urbanization can be censured and inequalities can be reward from the urban area of Bangladesh. For this purpose, the root causes of increasing urban population should be chalked out and necessary steps should be taken. In that case, rural-urban migration should be checked first.

### **6.4.2 Creation of Employment Opportunities**

The people migrated from rural to urban mainly due to lack of employment, control of Rural-urban migration is possible by ensuring employment opportunities in the rural area and if the control of migration is possible, Then the checking increasing of urban population will be easy. The new mills and factories may be established and policy may be implemented to create employment.

### **6.4.3 Increase of Infrastructural Development**

To continue the existing real trend of urbanization and development, infrastructural development is required steps to be taken for infrastructural development including construction and repairing of roads and buildings. To reduce the disparity and inequality on the basis of analyzing existing infrastructural development, policy may be formulated implemented.

### **6.4.4 Formulation and Proper Implementation of Govt. Urban Policy**

Formulation and implementation of government urban policy may be ensured on the basis of existing urbanization position. Confident attitude assessing the nature and trend of existing urbanization, to check out various urban problems, to increase the urban facilities, to formulate and implement the future urban model on the basis of the existing problems etc may be ensured the uniformity in urbanization, development and distribution of urban facilities.

### **6.4.5 Increase of Research works**

Urbanization has become an important issue in the world and for this, studies are required. Some studies have been conducted on urbanization but these are limited with the information, small area or only a one city like Dhaka, On the other hand, limited studies have been conducted on urbanization in Bangladesh due to lack of financial assistance, lack of government steps etc. New research on various aspects of urbanization is yet to be required and by this way and sufficient study, need based and time based research and planning will be possible. The government and civil society should come forward for this study purpose.

Due to limited information, some difficulties have been faced by the researcher but in spite of the obstacles and disfavoured situation, the researcher feel that the out comes of this research will be helpful to the researcher in future study.
